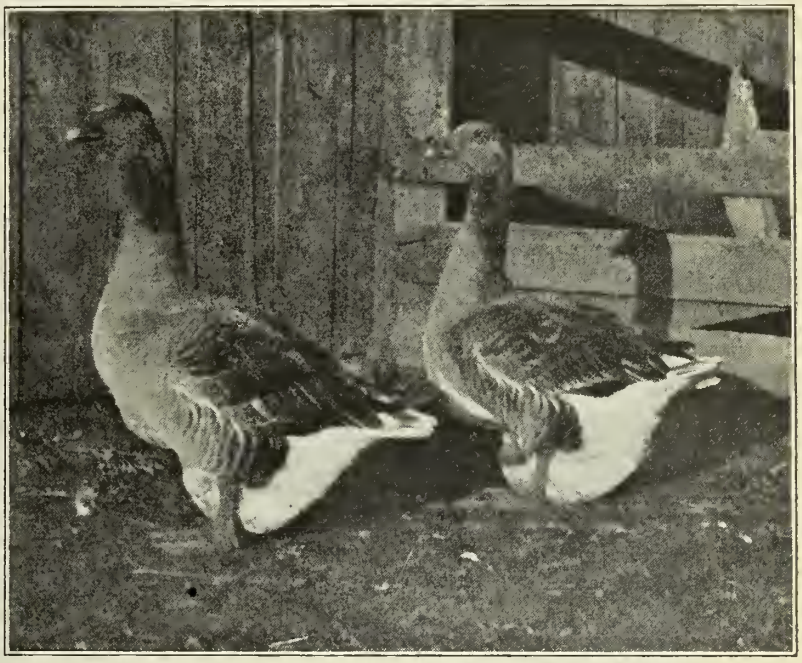
We incubate them with chicken hens, and let biddie mother them and will say if the old hen isn't very, very quiet, we take the goslings out of nest as soon as hatched and wrap in a basket, using some old flannel, keeping them quite warm till they are 24 or 36 hours old, then we put them under the hen again and put in a dry coop, a board bottom in early spring, and feed them grass or something green and tender; also corn bread, like we feed chicks, some grit and water to drink. Confine them to a small pen on grass till they are strong enough to walk well. Sometimes we have to tie the legs of one that can't keep its feet under it, close enough together so it can stand on them and make short steps, till he becomes strong enough to get along without tying, which is only a day or two. The little ones are quite dainty for a few days, not eating much. In a week or so let them at liberty and give them access to plenty of grass and water; also see that they don't get wet and that they have a nice clean dry coop, good and warm at night. Feed liberally, at first, corn bread from three to five times daily but don't let this kind of feed lie before them, as their lunch should be grass or something of that kind. When two or three weeks old substitute mash for bread; it saves work, and feed two or three times per day. Now if you have done this, you will not find many dead ones and we don't count on any unless old biddie gets her foot on one's neck. This she doesn't often do outside of nest. You will need no "specks" to see the growth and after the first month it is phenomenal, and they eat heartily. Put one on the scale at one month old, then once a week for about six weeks, and the amount the little fellow (little no longer), eats will be a satisfaction to you; you will only wish it was more. One of our prize winning males, in his seventh week gained two and one-half pounds. My husband said I'd feed him to death, but he yet lives and has carried off many a blue ribbon and is good, we think, for many more.

When the gosling is full feathered it does not require much grain till the fattening season, nor does it need any more to its size than any other animal. You have probably heard it said by some one that had a dislike for geese that one goose would consume as much grain as a pig. Such an assertion is preposterous; one fall we had a flock of twenty-five geese, fattening, feeding all the whole corn (ground is better) they would eat; and also one large hog in a pen likewise fattening, and it took no more corn for the flock of geese than for the hog. This is experience, not theory. The goose is only voracious while young and growing, or just before winter sets in at their fattening time. When the time comes for fattening do not permit the flock to have access to a pond, as they will swim too much. It is best to turn them in a stalk field, cornstalk, we mean, where the ground is rough, then they will not race, like they will on a pasture; always give plenty of water to drink. They will be at their heaviest from Thanksgiving till Christmas. An early cold winter is when they fatten earliest for if there is snow on the ground they sit around and fatten much sooner. The old stock needs no housing, as they seem to live quite comfortable around straw stacks or old buildings where they can shelter from the wind and come out healthy and vigorous in the spring. They rapidly loose weight after the middle of January or earlier, and no amount of feed can keep them from it. The males shrink faster than the females. The standard gives the weight of females two pounds less than males, but in a flock there isn't that much difference. One pound or even less is enough at most, as the male is harder to fatten and retains weight but a short time. As to the age of breeders, it is preferable to have the females over one year old. It makes no difference that we can see in regard to the males. One thing we made a note of the past season, that young males mated with two or three-year-old geese gave a much larger per cent of females. This might have been an accident, but we are inclined to think it is a natural result.



A pair of prize winning Tolouse Geese. Bred, owned and exhibited by B. F. Hislop, Milford, Ill. The gander has won first prize at Chicago three successive years, and the goose two. They have also won first at other shows. $50 was refused for this pair of geese at the Indiana State Fair. The photo from which cut was made was taken in October, while the birds were in poor flesh.

We have never mated over four females to one male, but think six would do as well, as we know parties that have used this number with good results.

The goose seems to be growing more popular each year and deservedly so. To my brother or sister fancier, will say, join hands with us and let us organize a Toulouse Goose Club. The goose is deserving and will bring long prices, too, ten to fifteen dollars each for good ones, and we have a pair of breeders and show birds my husband refused fifty dollars for. Let us push our favorites to the front. We intend to be present at Chicago's next show, and you that do not think of attending send your names to us, and a dollar, too, if our reputation will permit you (we consider our good name worth several dollars), and we will get all the goose fanciers in attendance

to meet and form a club. We are not out of employment that we propose this, but are a staunch friend to the goose. We have been asked by a few of the fanciers to make a start in organizing a Toulouse Goose Club, but have neglected till now on account of other business. We are very busy even now, but will say we expect to attend the Chicago show next winter, and if all interested in this will send us their name and address and $1 before said show, we will call a meeting and organize a club, but will say we will set a date and ask all to be present that can. Those that can't be present will have their names handed in. If this scheme should prove a failure we will promptly return money, but we have no fears of failure. Yours for success,

MRS. B. F. HISLOP,
Secy. Nat. Bronze Turkey Club, Milford, Ill.

# Success With Turkeys.

*By S. B. Johnston, Boggstown, Ind.*

You should have all your turkey nests made before the first of April. In this latitude they commence laying by the first of the month, and some seasons a few days earlier. A good nest is made by turning a sugar barrel or any large barrel on its side and staking it down with a narrow board at the bottom to keep the straw and eggs from rolling out. Then put up some kind of a blind and put this in the lot you have for your turkeys. They will take to these barrels and you will have no trouble in gathering your eggs, and they are not left out in plain sight for crow bait.

As I have stated before that I have a two-acre lot that I keep my turkeys in while the laying season is on, and then let them out about 3 o'clock p. m., or after they have all laid; then I see that they are all up at night to roost; then I close the gate, and it is not opened for new pasture until about the next day. We have carefully watched and selected the very best layers for years, and now we have the National strain, the very best layers on record. Where our hens used to lay from 16 to 20 or 22 eggs the first laying, now we have lots of hens that lay 35 to 45 eggs before they want to set, and this, too, is done by carefully taking the eggs from the nest as soon as possible and without being seen by the hen until she shows signs of wanting to set. Then she should be driven off the nest as soon as possible after laying. As soon as she lays, always take the egg out. Have a nest egg of glass until she wants to set, and if you want to get all the eggs possible before setting her, this should be taken out, and then she will lay several eggs trying to get a nest egg or a start on a setting. Have your setting hens in as quiet a place as possible and be very gentle with them and they will not get excited and break their eggs when you go about them.

A gentleman from Emma, Colo., writes to ask which would be advisable, to hatch the eggs in an incubator or under a hen? and would say, if you have a good incubator and understand how to run it and get good hatches, you might set the incubator and some chicken hens and put all the poults with the chicken hens, and then set the turkey hens later; then let the turkey hens take them all, as they are more hardy when raised with a turkey hen on the range than when raised with brooders or about the house with hens. When raised the latter way they are too liable to be overfed, and that is just as bad as to not feed enough, if not worse, if the underfeeding is done at regular intervals. But gorging them one day and starving them the next has brought thousands of little poults to the grave.

A lady writes from Gardner, Ill., and wants to know what was the matter with her young turkeys last fall. She says they would take sick suddenly and their droppings were green and yellow, with quite a number of worms in it, and it seems from the description that it is indigestion or the first stages of cholera, and should be very carefully dealt with. You should give a teaspoonful of castor oil with 4 or 5 drops of turpentine, and then give a few drops of turpentine in the feed for some time, or until the worms disappear. But the other symptoms must not be neglected. Use a lump of hyposulphite of soda about the size of a hazelnut each morning, and if that will not check it, use 5 or 6 drops of laudanum or 4 drops of chlorodyne in a teaspoonful of milk every 4 hours. Next month I will try and tell you how I feed and care for poults.

## A Successful Method of Feeding.

The following successful method of feeding is practiced on Highland Poultry Farm, Des Moines, Iowa, J. D. W. Hall, manager, where the famous strain of Hall's prize winning White Wyandottes are bred. This method of feeding and caring for their fine birds produces fertile eggs, good, strong, healthy chickens and plenty of them:

Monday, breakfast, sheaf oats; supper, warm mash. Tuesday, breakfast, vegetables; dinner, green cut bone; supper, cracked corn in litter. Wednesday, breakfast, sheaf wheat; supper, warm mash. Thursday, breakfast, sheaf oats; dinner, green cut bone; supper, whole corn in litter. Friday, breakfast, vegetables; dinner, whole wheat in litter; supper, whole corn and cooked whole oats. Saturday, breakfast, sheaf wheat; supper, warm mash. Sunday, breakfast, vegetables; dinner, green cut bone; supper, wheat, cracked corn and whole corn in litter.

The mash consists of cooked potatoes or vegetables, cut clover and beef scraps, all mixed to a crumbly mass, with some bran shorts, chop feed, a little oat meal and salt; sometimes a little charcoal.

We have found by long experience that this menu will give good results, and have settled on this method of feeding to a great extent.

We do not say that our plan will answer for all; it must be changed to suit location and conditions. No set rule can be followed, nor any certain quantity of feed per head be stated. We feed according to the way the fowls eat, keep them free from lice, in good, warm, dry houses, with plenty of pure, fresh water, oyster shell, mica crystal grit and keep them busy.

J. D. W. HALL.

# Water Fowl and Their Care.

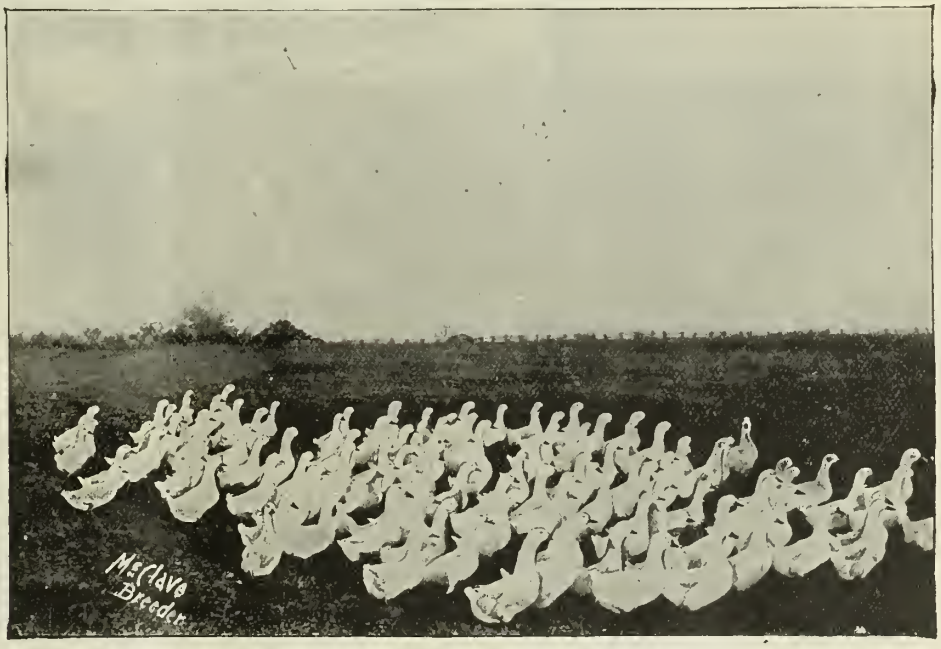
*By Chas. McClave, New London, O.*

## CHINESE GEESE.

Historians and traditions teach us tbat tbe Chinese are the oldest of all domesticated varieties of the goose family. The Brown Chinese are undoubtedly older than the present Oriental Chinese Empire. The whites are sports from the colored variety. Within the nineteenth century the pure Whites were unknown. The two Standard varieties have been bred after generations of carefully selecting in the bands of both English and American breeders. Many strains of the Whites even at the present time will show blue or gray feathers, especially in tbe backs of females until tbe second year. The size of the knob, also color, has been materially improved within the past few years by careful selection. Twenty-five years ago it was almost impossible to find a colored goose or gander with a solid black knob. Nearly all specimens would sbow gray or yellow at the base. However, many fine specimens can be found now with solid beaks and knobs, and with fine arched necks. Many breeders have had the erroneous idea that Chinese geese must be large, more after the African type than the true Chinese. Tbe present weight, Standard for Chinese geese, is very high, and our best breeders pay more attention to carriage, color and knobs than they do for extreme weigbts. It is almost an impossibility to find a Cbinese gander up to Standard weight with typical Chinese outlines. The typical bird of this variety should be very short in body, with a long, fine arched neck and stand very erect, almost in a perpendicular position, when on dress parade. Specimens of this type are rare. Typical Chinese of both White and Colored varieties are seldom seen even in our large exhibitions. The color of the Browns should be very distinct, free from any White or Gray at crown of head, with a bright leopard colored stripe down the back of the neck and continuing to the back and shading off with color or plumage. Too many specimens have a dark line extending down the neck. The Chinese are more of a swan-like appearance than any other variety of our domesticated geese. They have also many other characteristics originally their own. As layers they no doubt surpass any other variety. They commence earlier in the spring and continue longer, throughout the season. Many times we have known geese to lay even as late as October and November; however, this is not practical, as they will undoubtedly produce less eggs the following spring. Some objections have been raised against the Chinese on acount of their being too noisy, but this is a matter of personal fancy. All Chinese make good setters, being of medium weight and eggs usually hatch well and the young grow rapidly. They are the most docile and less pugnacious of any of our domesticated varieties. As feather producers they nearly equal the Embden or Toulouse, being of very fine quality and a great quantity of the finest swan-like down. They have been termed as equal to watch dogs on tbeir owner's premises. Any stir made during the night anywhere in their locality, whether by man or beast, is always responded to by the entire flock of Chinese. Their popularity has greatly increased within the past ten years, and wherever tbey have become known they have increased to the greatest extent.

We predict in the next few years that they may outrank even the Embden and Toulouse in point of numbers. No doubt that three Chinese can be raised on tbe same amount of food as cheaply as two of the larger varieties. Many prefer the Whites in place of the Browns on account of their being easier to breed true to color. However, a good strain of Browns is just as reliable in this respect as the Whites. For ornamental purposes many private and public parks consider the Chinese nearly equal to the swans.

CHAS. McCALVE.



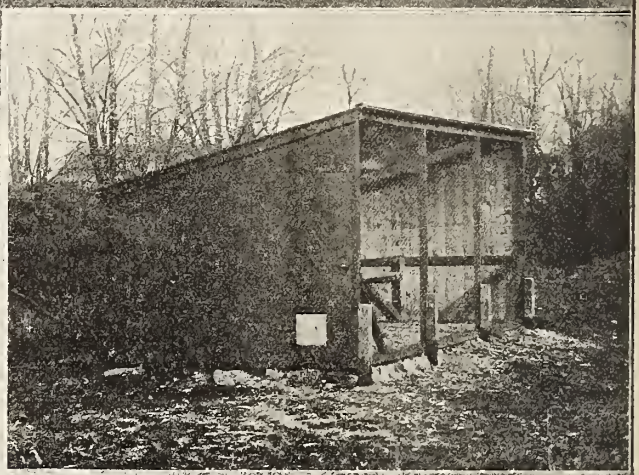
Pekin Ducks on the farm of Chas. McClave, New London, O.

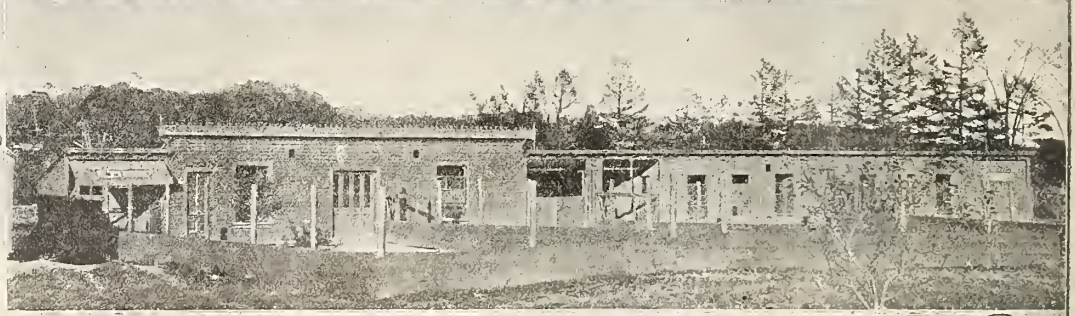
## American Ply. Rock Club.

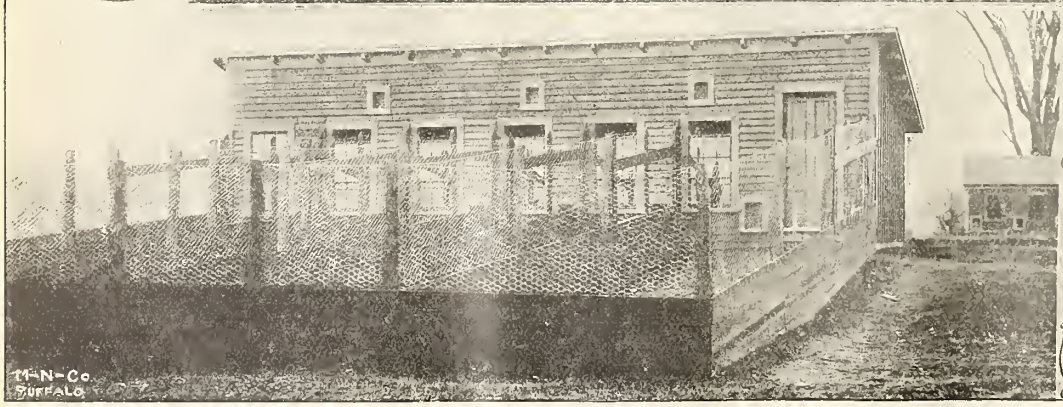
The American Plymouth Rock Club held their tenth annual meeting at Cbicago, Jan. 23, and elected officers for tbe ensuing year. Mr. W. S. Russell was reelected president, and Mr. H. P. Schwab, secretary-treasurer. The vice-presidents are F. J. Marshall, J. Y. Bicknell, E. B. Thompson, J. M. Rapp, J. F. Crangle, Geo. W. Miller, D. T. Heimlich. Executive committee, A. C. Smith, C. H. Welles, W. B. Gibson, H. S. Fletcher, F. H. Shellabarger, Wm. Fowler and Sid Conger. There are nine honorary vice-presidents and fourteen honorary state vice-presidents. Tbe report of the secretary-treasurer shows a balance in the treasury of $175 and the club is in a most prosperous condition in every way. It now has nearly 800 members and the list is constantly increasing. The dues are only 50 cents per year and ladies are admitted to membership free of all charge; 140 lady members were received at this meeting. All Barred Rock breeders should join the club. Send your name to the secretary-treasurer, H. P. Schwab, Rochester, N. Y.

The third prize White Wyandotte cockerel at Chicago was won by J. D. W. Hall, Des Moines, Iowa, although it was credited to another breeder at the time.

VIEWS OF
GROVE HILL
POULTRY
YARDS
Wm ELLERY BRIGHT
PROP'R
WALTHAM, MASS.







# William Ellery Bright's New Plant, at Waltham, Mass.

The buildings presented in the accompanying illustrations are all located at Grove Hill Poultry Yards, William Ellery Bright's new plant, which has been developed during the past five years. Here Barred Plymouth Rocks are kept exclusively. The original plant is occupied by the Brown Leghorns that win cups and coin at Boston, Philadelphia and New York. This plant, though some fifteen or twenty years old, was so thoroughly built and was in its day so far ahead of any rival plant that it is worthy of study today.

The old buildings were much more expensive, but Mr. Bright believes the later ones superior as to conveniences and the equals in warmth and durability of the more expensive structures. The Leghorns' buildings are all either lathed and plastered or sheathed in soutbern pine. The buildings on the new plant are built of matched boards, planed side in, with the outside covered with two thicknesses of building paper and shingled. The roof is constructed in the same manner. Though the weather here is quite severe at times no bird has been frosted or chilled in these buildings.

The main house is 200 feet long, is divided into twenty pens, 10x11x6 feet, leaving an aisle, 3x6 feet, at the rear. From this aisle all the feeding, crating, cleaning drop-boards and collecting eggs is done. The drop-boards extend about three inches into the aisle, so that a wheelbarrow or tram car will catch the droppings as they are brushed off. The pens are arranged in pairs, so that one watering dish directly under the partition answers for two pens.

Outside the arrangement for yards this house presents something of a novelty. Each pen has a yard 10x30 feet. This allows all birds to get out whenever the weather is not the most severe. Every pair of yards connects with a large yard 20x120 feet. This plan seems to have many advantages. It saves about one-half the fencing expense; it gives the birds a much larger range; allows fruit trees to grow to full size and thrive, thereby giving much better shade in summer and affords a means, by shutting the hens out for two or three days, of protecting the grass from extermination.

Adjoining this is a cook room 20x20 feet. This contains a 4-horse-power engine, a bone cutter run by power, a pump, which draws water from a well 600 feet distant. Just back of this is the boiler room, which contains the jacket kettle for cooking purposes. The grain room is connected to the north side of the cook room and is 12x20 feet. The bins used are made with the front of adjustable height and the bottom board on hinges to give an easy means for a thorough cleaning.

The ordinary open shed house has not in this climate proved as much of a success as one would wish, owing to the very great and sudden changes in the weather. With full faith in their usefulness in keeping breeding stock in fine condition and hardy during the winter, Mr. Bright built one that is protected by wooden doors in front instead of the usual canvas curtain. These are divided into top and bottom doors. Two cellar sash are fitted into the top door to give light in stormy weather when the doors are closed. On bright but windy days the top door is open, but the bottom doors are kept closed. In very pleasant weather all the doors are open. The two smaller houses are used to condition cockerels. The latter one is the better and has pens, 5x12 feet, with an arrangement of roost and drop-board that permits its being folded up. This prevents the birds from becoming too lazy. The open shed shows the plan of house or coop used for the breeding stock during the summer months, during which they have free range.

This, with the Leghorn plant, probably makes one of the best and largest equipped ones for growing purely fancy poultry in the country today. The building and furnishings are built as substantially as possible and will last as long as a house. They can hardly be excelled for their labor saving devices and could be used to raise commercial poultry successfully, if desired.

Mr. Bright is a successful broker, but is with his poultry and live stock nearly every day and makes nearly as much of a study of poultry as he does of his regular business. He has the best of everything with which to run his plant, help included. His superintendent, Mr. A. C. Smith, is one of the most experienced and best posted poultrymen in the East and the help is all selected for their knowledge of Standard bred fowls.

Mr. Bright won heavily this season at Boston, New York and Philadelphia. At Philadelphia on Barred Rocks he won three firsts out of five, including first cock, cockerel and pullet, besides other regulars and specials. On Brown Leghorns, two firsts, two seconds, two thirds, three fourths and one fifth, in addition to several specials. He won 43 regular and special prizes at Philadelphia.

At Boston he exhibited Barred Rocks only and won 23 regular and special prizes, including first cock, cockerel and exhibition yard.

At New York he won nine regular prizes on Brown Leghorns, including first cock, second cockerel and first exhibition yard. He also won several specials, including the president's one hundred dollar cup for best Leghorn cock, hen, cockerel and pullet, all varieties competing.

One of the most remarkable records in the annals of poultry show winnings is the one made by Mr. Bright at Boston, which is America's largest show. In the Barred Rock class he has won first cockerel there five years in succession and has won first cock and first pen five times out of six.

S-c. Brown Leghorn cockerel, winner of first at Boston, 1900. Bred and owned by Wm. Ellery Bright, Waltham, Mass.

---

OAKDALE, PA., Jan. 28, 1901.

*Mr. Vonderleith.*

DEAR SIR: Saw your ad in A. P. JOURNAL. Want your prices on five pullets with score cards. Light Brahmas, also the score of pen you sell your eggs from at $3.00. Yours truly,

C. J. VANCE.

## A LITTLE OF EVERYTHING.

We have again opened a department devoted to "A Little of Everything," and believe that our readers will find therein many valuable and timely suggestions upon seasonable subjects. These short items anticipate the questions arising in the minds of many breeders and the points brought out are covered in a brief, terse manner, easy of comprehension. A. P. J. advertisers and subscribers are at liberty to contribute to this department as often as they desire. Look over these items. You will probably find just the information you have been wanting. It is also probable that you can enlighten some fellow breeder upon some point, and we suggest that you send in an item now for the May number. Make it short. Write it upon a postal card.

### *Fertility of Eggs.*

I have a pen of twenty W. Rocks mated for incubator eggs in one pen, and two coops at one end of pen, about three feet from floor, for cockerels. I use three cockerels for the pen, one cockerel in pen and one in each coop. Changing cockerel every day gives cockerels two days to rest and eat all they want, and I feed them extra good in coops. I find eggs from pen very fertile and believe any one will find it to their advantage to try it. *O. E. Brooks, Edison Park, Ill.*

### *Laying Hens.*

Laying hens should never be so fat as to prevent the gizzard being felt. If food is given in excess of what is required to support life, it is disposed mostly in three ways: some hens put on flesh, some fat, and some lay eggs. The flesh can be found in the breast, wings and thighs; the fat in the stern and abdomen, and the egg in the nest. *J. R. Hudson, Hardin Springs, Ky.*

### *Not All in Mating.*

Breeding season is now here, and most of us are wondering what this or that individual bird will breed by this or that mating. Not all depends on the mating. As you pass among them each day take particular notice of each bird. See if in pink of health. See if rid of lice, too fat, etc. Be sure of these things and they will not disappoint you. As we take each hen from trap nest we look closely for these things. This is easy done and will pay you well, as it has me. *F. E. Mow, Union Mills, Ind.*

### *Setting Cochins.*

Cochins should not be set in boxes where they have to jump in on the eggs, but have a nest that they can walk in. Cover the top over to protect them and dust frequently with insect powder and you will have less broken eggs and hatch a larger per cent of chickens. *George Westwood, Streator, Ill.*

### *Cabbage as Exerciser.*

If your fowls are confined to close quarters, you will find a head of cabbage, hung up by a string and about six inches higher than the fowl, a fine exerciser. At the same time it gives them just the kind of food they should have at all times. Your groceryman will be glad to give you all the sprouted cabbage he has at this season of the year, and your hens will thank you for providing them with it, by laying you a few extra eggs. My pen of Leghorns have learned to perform some wonderful feats this winter and the old cock is already training for next winter's shows. *Paul Wagner, Louisville, Ky.*

### *How I Feed Brooder Chicks.*

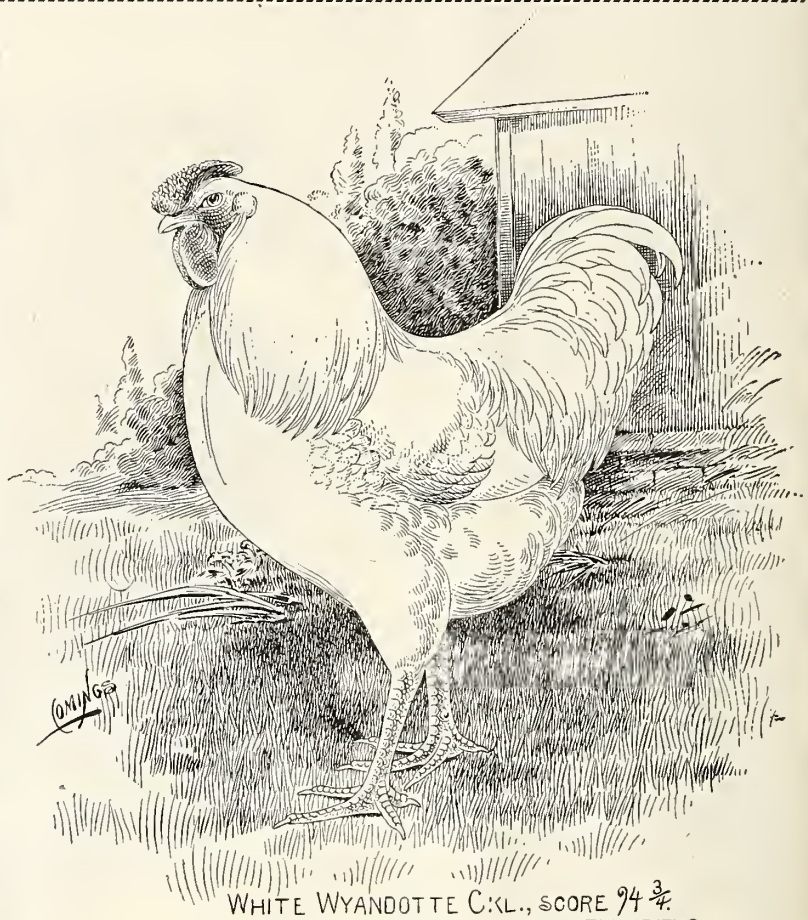
I do not feed anything until they are forty-eight hours old. Then coarse sand and water for first feed. The first three days' feed crumbled bread (not stale) and hard boiled eggs, with a little steel cut oats thrown in litter. Gradually increasing feed as they grow, but being careful not to overfeed. Keep them hungry and scratching as they grow larger for cut oats, cracked wheat and cracked corn, with plenty of sharp grit charcoal and fresh water always at hand, not forgetting some kind of green and animal food. *John W. Yates, Burnett Junction, Wis.*

### *Lice.*

Now is the time to get after those lice and mites, if you have not done so already. They will weaken the vitality of your eggs for hatching, and if the chicks hatch, they will soon destroy them then. So look out for them or your losses will be greater than your gains in the coming year. *Nichols Bros., Yorkville, Ill.*

### *Care in Breeding Males.*

It has been my experience that unless the male birds are fed extra that a great per cent of the eggs are infertile. To place a box or cage in the pen and put each male bird in it and feed him extra is only a few minutes' work. Care should be taken to not get them too fat. The females should also be fed very carefully if you want good, strong chicks. *F. R. Simmons, Casstown, O.*



WHITE WYANDOTTE COCKL., SCORE 94 3/4.
FIRST AT BLOOMINGTON ILL., STATE EXHIBITION,
BRED AND OWNED BY JOHN COOLIDGE, GALESBURG, ILL.

First prize cockerel at Galesburg and Bloomington, Ill., score 94¾. Bred and owned by John Coolidge, Galesburg, Ill. Sketched by Comings at Illinois State Show, who pronounced him to be "One of the finest birds in this class ever shown."

### *Mating Buff Rocks.*

While your yards should already be mated, it is not yet too late to change for the better. *Don't* breed males with too much tail or tail that turns towards the head. *Don't* mate too light males with dark females; the progeny will be splashed in color. *Don't* breed red males. There is a difference in color between Buff Rocks and Rhode Island Reds. Breed

first for shape, then color. *R. L. Leitch, Rock Falls, Ills.*

*Mistakes.*

Some years since, when starting out as manager of the Webster Poultry yards, at Columbia City, Ind., the prevailing idea was to make a dollar go just as far as possible. Consequently, 50-cent Barred Rock pullets and 75-cent cockerels was good enough. But what a mistake to think of the years spent trying to do something with nothing almost makes one's hair stand up. Experience is a dear teacher, but that's the way some catch on. Now, I believe in $10, $15 and $25 birds. Am finding out what I've been doing and where I am at. *A. L. Webster, Columbia City, Ind.*

*Mistakes in Making Large Pens.*

It seems to me that a great many breeders err in mating ten to twelve females to one male bird. With this number it is difficult to keep each bird's eggs separate and this information is absolutely necessary to the breeder who would be successful. I find six females in a pen are the extreme limit. Of course, the eggs will be fertile if more are in a pen, but it will be necessary, besides having trap nests, for the breeder to stay in his pens most of the time. *D. L. Quirk, Jr., Ypsilanti, Mich.*

*Mixed.*

What a difference exists between what you know is a standard bred fowl and what your neighbor calls a thoroughbred. When shown a pen of exhibition birds, the apple of your eye, he remarks, "Oh, yes, we kept that kind, only larger ones, and found they did better when mixed." The more a farmer mixes it the better he likes it and the further he gets from being a fancier. *Stephani Poultry Co., Belleville, Ill.*

*What we Learned in Show Room.*

That stock must be better than it ever was before if we wish to win. That it must be in pink of show condition, clean, tame, and at its best. Also learned that our judges are gentlemen and all seem to be doing their best to give satisfaction and that we don't all see out of same set of eyes, especially if the other fellow downs us. That over 90 per cent of fanciers prefer score card to comparison shows. *E. F. Peirce, Port Clinton, Ohio.*

*Prices.*

One trouble with the fancy poultry business is that about nine persons out of ten who are starting into it are expecting something for nothing; they read the standard description of a perfect bird, sit down and write to some advertiser giving him a description of such an one, and then send for the lowest priced specimen he gives in his letter. A man who sends $2 for a cockerel and then returns him because he is not worth $5 deserves to be beaten. *Dr. H. F. Ballard, Chenoa, Ill.*

*Want Good Sales.*

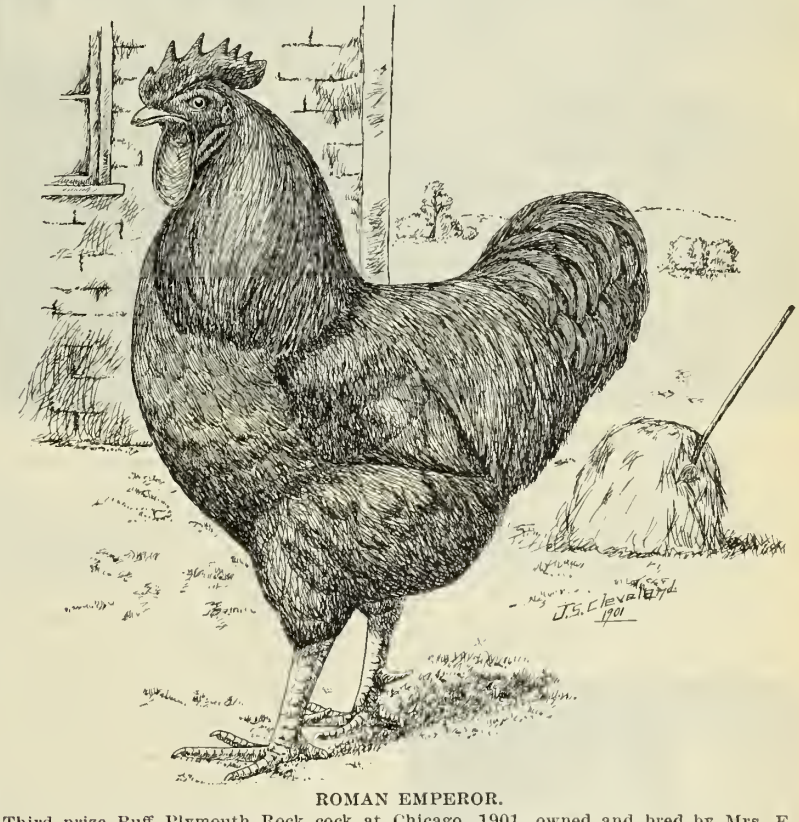
There are three essential things if a fancier wishes good sales. 1st, he or she must have good stock, plenty of it, be honest and businesslike; 2nd, attend one or two good shows and get a good show record; attend the Pan American Chicago show and Michigan state show at Battle Creek; 3rd, advertise in a judicious, businesslike manner in your nearest and best journals pertaining to poultry; change those adds often; think of something new and catchy. *Frank W. McKenzie, Concord, Mich.*

*Cleanliness and Care.*

I have been a farmer for many years, and always a fancier of fowls, but have not made it my whole business for only two years, but experience has proven to me that cleanliness, warmth and care of feeding are the main roads to success in the poultry business. The care in breeding gets the fowl that brings the money. *J. K. Austin, Onarga, Ill.*

*Mating Pekin Duck for Exhibition Purposes.*

Pick out ducks of good form, straight wings, closely folded; long, deep and broad bodies; good bill, free from goose shape, and as white as you can find; in fact, they are hardly ever very defective in color. Next comes the drake, half the whole flock. Be careful here. Don't mate any old thing. He must be fine form, long, deep and broad; active, large bone, wings closely folded, tail quite erect, and a natural downward slope from head to tail... *A. V. Dykes, Dana, Ill.*



ROMAN EMPEROR.

Third prize Buff Plymouth Rock cock at Chicago, 1901, owned and bred by Mrs. E. I. Reynolds, Haskells, Ind.

*Eggs Laid Outside the Nest.*

One cause of this trouble is that not enough nests are used. Because a number of hens will use the same nests, while others are not used at all, we are apt to think that it is useless to provide more. This is a mistake. There should be one nest for every three or four layers and they should be so constructed and situated that they will make secluded and inviting places for the biddies. Hens are not all of the same mind, and the location for the nests that will suit two-thirds of the flock may not suit the other one-third, hence the nests should be so placed that each bird will find one to suit her. Trap nests, correctly designed and installed, will correct this trouble.

F. O. Wellcome.

Yarmouth, Me.

*About Advertising.*

There is one thing of which I am quite certain. That is, if we would succeed as advertisers we must select a good medium and stay by it. The papers that did not pay me two years ago are paying best now. I believe people must see our name in a particular place long enough to become familiar with it. And this is not always done in two or three months. *C. W. Browning, Portland, Mich.*

*Feeding Brooder Chicks.*

One of the best feeds for young chickens that we ever fed is good, well-baked white bread, fed dry. It should be well baked so that it will crumble well. Feed a little millet and cracked wheat for them to scratch for in litter, with a little green grass or cabbage; if not at hand raw potatoes cut fine or grated. A little lean meat twice or three times a week.

J. T. Molloy.

Laurel, Iowa.

In feeding hens for eggs, do not feed grains mixed, feed one kind of grain at a meal. In this way a variety of feed can be easily fed and the fowls will not tire of any one feed. The poultry keeper with a rye patch at this time of year is strictly in it, and he is certain of fertile eggs—something not always obtainable just at this season.

H. P. Mason.

Fayette, Mo.

## THE WHITE KLONDIKES.

With the exception of the Game fowl, the ultimate value of any breed of chickens is dependent upon their value as a table bird and a market fowl, upon the value of the feathers, upon the ability of the breed to change grain into eggs, especially their production of eggs when the fresh egg commands a good price, and upon the ability of the breed to attract attention and notice when placed on exhibition. Dr. W. R. Black, of Bolivar, Obio, whose advertisement appears

White Klondikes. Bred and owned by Wm. R. Black, Bolivar, O.

in our out columns, and who is the originator of the Klondikes, claims that a thorough examination of the merits of this breed will convince any person that in all the different methods of computing value the Klondike breed is entitled to lead the procession. Dr. Black sends us an egg record of eight females which

Trio of White Klondikes bred and owned by Dr. Wm. R. Black, Boliver, O.

laid 138 eggs in the month of December. This is an excellent showing considering the fact that two of tbe birds did not begin laying till tbe 18th of the month and one on the 9th. The average weight of one dozen Klondike eggs is 24 ounces.

———o———

Between a little extra care and a little neglect lies all the difference between the flock of hens that lay in winter and the flock that does not.

## POULTRY JUDGES AT THE PAN-AMERICAN EXPOSITION.

The following judges have been selected to place the awards on poultry at the Pan-American Exposition at Buffalo:

Sharp Butterfield, London, Ont., Can.; Geo. O. Brown, Baltimore, Md.; B. N. Pierce, Indianapolis, Ind.; F. B. Zimmer, (Minorcas), Gloversville, N. Y.; J. F. Crangle, (water fowl), Simsbury, Conn.; D. A. Nichols, (Cochins), Monroe, Conn.; A. F. Pierce, Winchester, N. H.; H. A. Bridge, Columbus, O.; Charles McClave, New London, Ort.; W. S. Russell, (Plymouth Rocks), Ottumwa, Ia.; Dr. S. T. Lee, Hodges, S. C.; W. L. Shaw, Le Grange, Tex.; Jno. L. Cost, Hagerstown, Md.; J. H. Drevenstedt, Johnstown, N. Y.; T. F. McGrew, (Cochins and C. Bantams), New York, N. Y.; J. Y. Bicknell, Buffalo, N. Y.; C. F. A. Smith, (White Wyandottes), Boston, Mass..; Thos. H. Smelt, Woodstock., Ont.; C. E. Howell, (S. C. Brown Leghorns), Elmira, N. Y.; W. C. Denny, (Buff Rocks), Rochester, N. Y.; Jas. A. Tucker, Concord, Mich.; D. P. Shove, (R. I. Reds), Fall River, Mass.; H. J. Quilhot, (Bantams other than Game), Johnstown, N. Y.; F. W. McKenzie, (Houdans), Concord, Mich.; Thomas F. Rigg, Iowa Falls, Ia.; Adam Thompson, (Indian Games), Amity, Mo.; Charles T. Cornman, (Game Bantams), Carlisle, Pa.; I. K. Felch, (Dark Brahmas), Natick, Mass.; J. W. Bruckhart, (W. C. B. Polish), Lititz, Pa.; B. C. Thornton, (Games and G. B.), So. Vineland, N. J.; P. H. Scudder, (Barred Rocks), Glen Head, L. I.; Geo. Purdue, East Orange, N. J.; C. I. Newell, Lisbon Falls, Me.; Theodore Hewes, Trenton, Mo.; Jas. Forsyth, Owego, N. Y.; J. F. Knox, Bradford, Pa.; Ezra Cornell, Ithaca, N. Y.

———o———

Walter A. Vanderlieth, of Mt. Pulaski, Ill., is selling some exceptionally good Light Brahmas at less than half their value in order to make room for his large flocks. Intending purchasers of stock or eggs of this variety can get what they want from Mr. Vanderlieth at a bargain.

## CARE AND MANAGEMENT OF SETTING HENS.

As the season for hatching young chicks is now upon us a few words as to the care and management of setting hens will surely not be out of place, and I trust may be a help to some one. I use bens almost exclusively for hatching my young chicks, sometimes the incubator, but my success has been much better with hens, and I attribute the most of it to the care and management of them.

When "Biddy" becomes broody I always—or most always—move her to a good, suitable place, some outbuilding, shed, or part of henhouse that I use for that purpose where she will not be disturbed, or if it is real early in the season I put her in the cellar.

I move her to her new quarters after dark, handle her in the right way and I have no trouble in getting her to settle right down to business. Have a good, comfortable nest filled for her that she can get off and on by just walking in upon the eggs and in this way she is less apt to break her eggs. When I set her I always give her a good dusting with some good lice powder—there are several good kinds advertised in the A. P. J.—sometimes I use tobacco stems (you can get them at any cigar factory) in bottom of nest also; take her off the nest at least twice during the three weeks, dust her well with the powder, the last time about three days before time for her to hatch. Keep before her all the time plenty of corn, fresh water and grit, and it is a splendid idea to have a shallow box near by filled with dust for her to take a dust bath when she likes.

Some may say this is lots of trouble, but I can assure you it will pay every time, for you will get much better hatches and you need not be afraid of your hen leaving her nest before her time is up, thereby losing your eggs. Hens managed in this way are a source of pleasure to me, and I very often set the same hen twice in succession, raising the chicks in the brooder or giving them from two or three hens all to one, and set the others over, thereby getting double duty, which comes in very handy when setting hens are scarce, and with no bad results, either, as I have never had a hen leave her nest. We heard so much complaint last year of hens leaving their nests, etc., but, my readers, if you will but read and take heed, handle your setting hens after the way I have tried to tell you, and don't be afraid of a little extra work—as it takes work to raise poultry successfully, you are bound to succeed much better hatching your little chicks than you will if you do not. H. E. BATES.

Galesburg, Ill.

———o———

Mr. E. B. Wright, the White Rock specialist, of Detroit, Mich., has moved to his farm at Birmingham, Mich., where he will be better prepared to take care of his increasing trade. Mr. Wright's success is an example of what may be accomplished by having good birds and selling them at reasonable prices. He has a show record that is seldom equaled and his experience enables him to mate his birds in such manner as to produce the best. His strain is noted for large size, shape and pure white plumage, and it is easy to understand why he has no trouble in satisfying his customers. His new circular will be mailed free to all applicants who mention A. P. J.

## A Little of Everything Continued.

*Noon Feed.*

Feeding grain at noon is a mistake in my opinion. The noon feed should be green food. This is especially true as regards the larger breeds. Feed green food in place of grain at noon and you will have less overfat hens, get a larger egg yield, eggs will hatch better, chicks will be stronger. Try it and see if you do not agree with me. A. P. WINSLOW.

Freeport, Me.

*Feeding for Eggs.*

We pin a good deal of faith to cut clover and clover tea to make hens lay at Sunnyside Poultry Farm. In the morning we feed whole corn or boiled oats, at noon boiled clover; we draw off the tea and put it in the evening mash, which consists of small potatoes boiled, mixed with bran and corn ground fine, cob and all. Consequently we get eggs when they sell at 32c per dozen.

SUNNYSIDE POULTRY FARM.

East Lewistown, Ohio.

*"A Little of Everything."*

To be successful get your chicks out early. Feed with good judgment. We find that cornmeal, sour milk and unfertile eggs baked is the best for the first two weeks. Feed often but don't overfeed. Get them on the ground the third day. Keep everything clean and watch them grow. Cull close; never keep a poor bird. Take an interest in your visitors and explain the good points of your stock and you will secure your share of the business. Be honest, cautious and obliging, and success is yours.

L. E. DOVE.

Shelby, Ohio.

*Feeding.*

I have not fed any soft feed for ten months and my flock is healthier than ever before. I have cockerels ten months old (Langshans) weighing 11 pounds, and pullets 8 pounds. My birds have farm range and mornings I feed millet seed, oats or wheat. At night one-half handful corn to each bird; and then they get too fat. L. E. MEYER.

Bowling Green, Mo.

*Hens Remaining on the Nest Too Long.*

Some claim that it is quite natural for a hen to remain on the nest for a long time while laying, sometimes for several hours; that it is hard work, and they need a long rest after laying. Close observation for two seasons past convinces us that a hen in proper condition wants to leave the nest, get a drink and go to scratching very soon after she lays. When our hens are ready to leave the nest inside of half an hour after entering, we are satisfied they are in good laying condition. If they stay on for one, two or three hours we believe it is because they are either too fat, constipated or going broody. A good layer seldom wants to stay on the nest longer than a half hour. She hasn't time. She must get ready for the next day.

PHILIP H. GEORGE.

Braidwood, Ill.

*Relations of Buyer and Seller.*

What do fanciers talk about when they meet? Well, while at the recent New York show I talked with some breeders about mating; how do you manage your egg trade? Some said special matings were farmed out and the eggs from those birds were set for their especial benefit. Is that a fancier's way to treat customers? Not by a long chalk. My opinion is that it is hardly honest to fill an order for eggs at a regular selling price from stock you do not care to breed from. Mate no birds that you do not hatch from and keep the "eggs for hatching" business on an honorable basis. J. H. DOANE.

Gouverneur, N. Y.

*Feed for Laying Hens.*

We are testing the difference between corn and oats for laying stock. The evidence is in favor of oats. Used the so-called clipped oats, with a mash at night of H-O food 1 part, bran 2 parts. Green cut bone twice per week at noon when feeding the corn; the rest of the feed was the same as now. Under the oat feed the texture of shell changed in color. Eggs are larger and more of them. J. H. AND FLORA A. WADDELL.

Wauseon, Ohio.

**CORNELL'S LEGHORNS, BUFF and WHITE, at New York and Boston.**

My Leghorns have won the highest honors of any strains of this variety at New York and Boston. They have been line bred for ten years and to day lead all other strains for breeding and exhibition purposes.

My Buffs have won 1st on breeding pen for five successive years at America's leading shows. 1st PRIZE BREEDING PEN AT MADISON SQUARE GARDEN IN 1897-1898-1899. 1900 AT BOSTON. 1901 AT NEW YORK. No other strain of Buff Leghorns has ever won 1st on breeding pen at the great New York show for so many years in succession.

At BOSTON 1900, they won four times as many 1st prizes as all competitors combined, and every special for which they competed, including the American Leghorn Club Cup for largest and best exhibit.

My White Legborns have been well known winners for years. Besides my own great exhibit of Leghorns, my birds have won in the hands of customers, first prize during the past two seasons at New York, Boston, Philadelphia, and other leading shows throughout America.

Besides their show record, these birds are great layers. My matings are this year finer than ever, and I am now booking orders for eggs for hatching at $3.00 per 13; $5.00 per 26; $8.00 per 50; $15.00 per 100. Catalogue Free. Satisfaction guaranteed. EZRA CORNELL, Ithaca, N. Y.

THE AMERICAN POULTRY JOURNAL

Published the first of each month by
GEO. G. BATES, Editor and Proprietor.

FRANK HECK, Associate Editor.

Subscription price 50 cents a year in advance.

When delivered by carrier in Chicago 60 cents a year in advance.

Payment for AMERICAN POULTRY JOURNAL, when sent by mail, should be made by money order, registered letter or stamps.

Write name and address plainly, and if JOURNAL does not come regularly and promptly, write us at once.

In requesting change of address be sure to give the old address as well as the new one. This is important.

Advertising rates will be furnished on application.

The reliability of new advertisers must be ascertained before an insertion of an ad in the columns of AMERICAN POULTRY JOURNAL can be made. This is a business matter, the justice of which is readily seen, as proteetiou to the readers who answer advertisements.

Alway say when writing advertisers, that you saw it in the AMERICAN POULTRY JOURNAL.

All copy for advertising and manuscripts for publication should reach us not later than the 20th of the month preceding the date of issue.

## Does Money Move the Poultry Press.

This question is brought up as a result of the opinion expressed by a correspondent in tbis number under the heading "'Is Extra Weigbt Desirable?" He is not alone in his feeling tbat tbe poultry press is unduly influenced by the fancier and as a general proposition we do not believe tbat the accusation will hold good. As far as AMERICAN POULTRY JOURNAL is concerned, we wish to empbasize tbe fact the reading columns are always open to a free discussion of all questions affecting the poultry interests and we are glad to present all sides of any question. We believe that our sincerity of purpose in this respect is evidenced by the appearance in full of our correspondent's remarks. The only thing barred from our columns is acrimonious personalities and factional controversies. The trouble witb tbe majority of people who decry the fancy is that tbey are not in position to offer intelligent criticism because they are not familiar witb the conditions. We know of no otber vocation in which it is easier to be deceived in regard to the fund of knowledge one possesses. If it were not for tbe fanciers, tbe people who breed poultry partly or wholly on account of their love for the birds, where would tbe business as a business be? Utility may be tbe foundation of the business, but the fancy is the life of it. The fancier spends more money, as our correspondent suggests, simply because he does more business, and it takes money to do it in any line of trade.. We are for tbe people wbo advertise in and subscribe for tbe JOURNAL whether they be utility men or fanciers or botb. The man who spends his money with AMERICAN POULTRY JOURNAL gets the best service we can render him, and we never lose sigbt of his interests for a moment. Our plans are all laid and our energies all exerted with that end in view. We believe in reciprocity as tbe only true and lasting principle in cases of this kind. As for the editorial pages, we will say that they constitute our right of suffrage, so to speak, and cannot be bought. We not only have opinions but we express them without fear or favor and shall continue to do so regardless of results. We believe tbat a well defined editorial policy is necessary for tbe barmonizing of tbe various interests involved and as presented to our readers. AMERICAN POULTRY JOURNAL is not the organ of any association, club or set of breeders, neither is it in any way connected witb any business in competition with those wbo patronize it.

## Buying Eggs for Hatching.

Tbere is every reason to believe that this season will be a repetition of former ones in tbe matter of occasional unsatisfactory results obtained from eggs purchased for hatching purposes. Tbe very nature of the business makes this a foregone conclusion and as tbe number of persons becoming interested in poultry for tbe first time runs into the thousands, it is perhaps timely and appropriate to mention some of the conditions affecting the business wbich, while thoroughly understood by older breeders, will be in the nature of instruction to tbe army of purchasers above referred to. Buying eggs is something of a lottery. We often see the statement tbat "Like will produce like" meaning as generally interpreted that high scoring birds will produce tbeir equal. This is only partially true and amateurs should not be misled by it. Any poultryman who has ever mated a pen of birds knows that a majority of tbe progeny will not be the equal of tbe parent stock and this is true even when line breeding is intelligently practiced. This precludes the possibility of getting all prize winners from a setting of eggs. The blood lines in the various families of fowls are more or less antagonistic and the mating of higb grade specimens will often bring out tbe latent characteristics in the progeny and defects will be developed which do not show in either of the parents. These conditions are probably responsible for more dissatisfaction than any others. They are the unalterable agencies which influence the hatch as far as the quality of the progeny is concerned. In regard to the number of chicks produced there are obligations to be fulfilled upon the part of both buyer and seller and which both parties to the transaction should duly consider. The seller should keep his breeding birds in the best condition. In the first place they should be of just such quality as he represents. They should be entirely free from disease. They should be vigorous and hardy and of strong vitality and not exhausted and worn out from too prolonged service in the breeding pens. They should not be over fat and the chances of fertility thereby lessened. They should be kept as free from lice as eternal vigilance can make them. Crowded quarters and too close confinement should be avoided. Animal and green food should be provided if the birds are not on good range. In many cases the male bird needs to be fed separately. Care should be taken to see that the matings are congenial to the individual specimens. Eggs should be kept in a reasonably even temperature and turned often, once each day is not too frequent. Care should be used in packing for shipment both in regard to the manner of packing and the chances of the box or basket to stand rough handling. The buyer likewise bas a few obligations to fulfill before he can justly criticise the seller. He must remember that according to the established rules of trade he assumes all responsibility for the welfare of the eggs after the shipper has delivered tbem to tbe express company in good condition. If tbe package is exposed to zero weather by the express company at some railroad station or the germ is started by the eggs remaining a couple of days in an overheated express car or if some messenger drops the package to the floor or platform and jars the eggs enough to injure them, these are not the faults of the seller but are some of the chances the buyer takes. Then there are several things after the receipt of the eggs for which the buyer is responsible It should be remembered that some hens even though they set steadily are not able to generate enough beat to properly incubate a setting of eggs. This may be a natural condition or it may be the cause of the temporary bealtb of the bird. Too many eggs should not be placed under a hen. Fifteen eggs are too many prior to April 1. The setter should be free from lice so that she will not be compelled to leave the nest or stand up in it for relief. It is possible for her to set too steady and ruin the hatch. Sbe may leave the nest too long, at a time when you did not see her. She may get off at dusk and not find ber way back till daybreak and you cannot say absolutely that sbe stuck to the nest unless you saw ber every hour out of each twenty-four. Much may depend upon the make-up and location of tbe nest and especially under certain conditions of the weatber. After tbe chicks are hatched they must receive proper care and feed or tbey will never develop into prize winners even though tbey have the foundation for these characteristics. If you have had an unsatisfactory hatch do not write the breeder a mean letter but consider wbether or not you might be at fault. If you receive a complaint from a customer do not ignore it or refuse to consider it until you are sure that the eggs sent him were produced under circumstances which should have made them fertile and capable of hatching vigorous healtby chicks.

## Work of the Experiment Stations.

We are in receipt of bulletin 71 of the West Virginia Agricultural Experiment station. It is devoted to experiments with poultry, and therefore should be of interest to all poultrymen, but it is not.

Tbe experiments as far as tbey went were intelligently and carefully conducted, but the trouble lies in tbe fact that the conclusions arrived at are common knowledge possessed by every poultryman wbo has had any experience wbatever or wbo has ever read a poultry journal. It is strange tbat tbe men in charge of these stations in the various states do not realize the position they are in, to be of untold benefit to the poultry fraternity by directing tbeir efforts to the solving of problems which are of vital importance to breeders and which the breeders tbemselves cannot, except in a very few cases, solve for themselves, unless it is done at great expense and loss of time. Tbis condition is not peculiar to tbe work of tbe station in question, but is characteristic of all of them. In the above mentioned bulletin we find that a test covering a period of

five months was made, to prove that hens will lay more eggs in winter if given warm and comfortable quarters. The conclusion arrived at, in the language of the bulletin, is: "This experiment clearly indicates that for the production of winter eggs it is highly important to build warm, substantial houses for the hens." May we ask, is there a poultryman in the land who does not know this to be a fact? The worthlessness of the experiment is only exceeded by its incompleteness. The temperature of the houses was not recorded. It was simply between warm and cold, and there is nothing to indicate how warm or how cold the houses were. Another test was made to prove that ground fresh meat and bone were of more value in increasing egg production than was meat meal. Of course it is. Did any one ever doubt it? It is also shown that a ration consisting of part green food produces more eggs than if it is entirely omitted. The information is also conveyed that close confinement has a tendency to lessen the fertility of eggs as compared with exercise and free range. This information would also be valuable were it not for the fact that it is ancient history.

## Abbreviation of Names.

The practice of abbreviating the names of many breeds is one that should be discouraged. This is particularly true of the Plymouth Rocks. There was a time when "Plymouth Rock" was almost universally accepted as meaning the barred variety. Later the Whites became so numerous and popular that the Barred Rocks were designated as B. P. Rocks. Now we have the Buffs, which are gaining a stronger foothold each season, and the point has been reached where it is decidedly questionable at times whether B. P. Rocks means Barred or Buff. For this reason it is desirable that breeders state in their advertisements and correspondence which variety they are speaking of. This matter will probably not be deemed of much importance by those who have not had occasion to come in contact with it. We have known people to write to breeders of "B. P. Rocks," expecting to buy Buffs, when the advertiser had Barred Rocks only. We now have an unanswered inquiry from a subscriber, who asks if a cut of 3 points is not far too severe for defective wing on a good average specimen of B. P. Rocks. It would mean more on a Buff Rock than on a Barred. There are many other instances where the abbreviation is shown to be objectionable. Breeders of Barred Rocks should remember that their favorites do not hold the position which they did formerly, not that they in themselves are any the less valuable or desirable, but rather on account of the fact that other varieties have come into existence that are just as valuable in every way. It is worthy of special notice that at Boston, New York and Philadelphia this season the Barred Rocks were outclassed by one of their close rivals. Such would no doubt have been the case at Chicago also had it not been that the meeting of the Barred Rock Club was held there. If some friend of the Barred Rock wishes to explain the cause of this state of affairs we would be pleased to hear from them.

## Size in White Ply. Rocks.

In defense of our position in regard to overweight birds and in answer to the questions asked by Mr. Fishel in the following article we desire to state briefly that some of the most prominent, intelligent and careful breeders of all varieties have at times deprecated the tendency upon the part of a few to demand birds much over Standard weight. The action of the White Plymouth Rock Club is ample evidence in support of the statement. In referring to the editorial in the March number he asks if we are endeavoring to hold the White Rocks back in order that the White Wyandottes might pass over them. We are only approving the action of the White Rock breeders themselves as carried out at their meeting and they surely would not do anything detrimental to their own interests. An overweight White Wyandotte is just as undesirable as an overweight White Rock, and in view of the fact that the standard weight of the Wyandotte is less than the Rock the former can never surpass the latter as far as weight is concerned if the Standard is adhered to and typical birds of both breeds are used for comparison. We are not prejudiced in our position regarding any par-

**How Best To Set A Hen.**

**Hens Will Set**

And do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kind of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

**Eggs Will Hatch**

When the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Under these conditions eggs from healthy birds are usually well fertilized. When good eggs fail to hatch the trouble is often outside the eggs. Lambert's Death to Lice Powder never injures the fertility of eggs for hatching, the sitter, or the little chickens should they hatch in a handful of it.

**Chicks Will Grow**

When started free from vermin and kept so from the shell up. If allowed to become lousy they lose strength and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointment would save their lives.

**Death to Lice Remedies**

Death to Lice Powder for dusting layers and sitters—5 oz. sample, 10c postpaid; 48 oz., 50c; 100 oz., $1.00, from here or nearest agency to you by express. Death to Lice Ointment for head lice on children or chickens, also scaley shanks on fowls, 10c and 25c postpaid. Death to Lice Special, for making a liquid louse or mite killer and for mixing with the regular powder for fleas on dogs, moths, etc., 4 oz., 10c; 16 oz., 40c, by mail postpaid. Death to Lice Lice Liquid for spraying poultry houses, painting roosts, etc., (already prepared) 1 qt., 35c; 2 qts., 60c; 4 qts., $1.00, f. o. b. here. Book and "How Best to Set a Hen" sent free.

**D. J. LAMBERT, Box 308, Apponaug, R. I.**

**All Our Stock is Produced On Our Home Farm.**

We don't holler so loud as some, but as a matter of fact we are probably **producing and selling** more pure bred poultry and eggs than any other farm in New England. **YOU ARE INVITED TO COME AND SEE FOR YOURSELF** how much and how good stock we have. You won't have to chase all over the country to find where it is kept.

**EGGS** *From Pekin Ducks, White Wyandottes and White Plymouth Rocks.*

Hens eggs, $2 for 13; $5 for 39; $12 for 100. Incubator eggs, $8 for 100. Duck eggs, $2 for 12; $5 for 50; $8 for 100. A few eggs from prize winning pens of ducks and hens. $5 for 13; $8 for $36. Send for circular.

***POLLARD'S POULTRY FARM, So. Attleboro, Mass.***

***F. M. POLLARD.*** ***GEO. H. POLLARD.***

**GARDNER'S BARRED ROCKS**

Opened the New Century with the ***greatest victory ever won in Madison Square Garden,*** the Sweepstakes Barred Rock Show of World, and made the most phenomenal winning of the season, viz.:

***Cocks, 1, 3, 4 and 5; Hens, 1 and 2; Cockerels, 1, 2 and 5; Pullets, 1, 2 and 4; Pens, 3 and 5; with every special offered in the class, including the Grand Fisher's Island Challenge Trophy, value $100, for best display of Barred Rocks; the $100 Speepstakes Cup offered by the President for the best Cock, Hen, Cockerel and Pullet in any variety of Plymouth Rocks; the Gold Special for best P. Rock of any variety, hatched in 1900, and special for best Barred Rock Cockerel in the show.***

My record on ***First on Cockerel for three years in succession,*** and all firsts in the open class has never been equaled by any exhibitor, and surprised even the natives of Gotham. In the last two years Gardner's Barred Rocks have won in Madison Square Garden ***SEVEN FIRST PRIZES*** out of the ten offered, or more than double the number won by all competitors combined, and more than ***THREE TIMES*** the number won by any other exhibitor, proving that they are up to date, and placing them at the top of the ladder.

Many of the largest shows in the country have been won this season by birds bred and sold by me and from my eggs. My yards contain more New York and Boston winners than those of any other breeder. Free circular gives list of winnings and full description of stock, with prices of Eggs, etc.

***M. S. GARDNER, Philadelphia, Jefferson Co., N. Y.***

ticular variety. We champion all breeds and can see good points in all. We admire the breeder who is conservative in praising his favorite. The statement is made that in live stock of all kinds the larger and heavier breeds are in most demand, that in cattle, for instance, it is the Hereford, Short Horn or Polled Angus. According to this argument, why breed the American or Mediterranean varieties of fowls? Why not take the Brahmas, Langshans and Cochins, which are the giants of poultrydom. The only trouble with the cattle and swine argument is that it is not applicable to the case. The question of weight is one of individual specimens of the same variety and not of two or more different breeds. The largest breed of cattle is not the most popular one. Poland China swine are the most popular hogs, but there are other breeds that weigh as much and more, so the argument hardly holds good from any standpoint. The writer speaks about nine-pound White Rock pullets and eleven-pound hens. A White Rock of this size is one in name only. It is not a well-shaped bird with the Standard as a guide. In the standard description of the shape and size of White Plymouth Rocks there are twelve sections from the head to the legs and toes. *Ten* of these sections are described as *medium* in length or size and the weights have been fixed accordingly. Now if you get a larger frame and more weight, you get a bird that is off in shape and size in just such proportion as the various sections depart from *medium* size. Reference is made to our statement that "to get birds to Standard weight they should be hatched at the proper time," and the assertion is made that all birds cannot be hatched the same day or week. Certainly not. But they can all be hatched during March, April and May and that is the proper time to bring out birds of the American varieties. This subject of overweight is one of great importance, but it is not for us to argue it except to prevent a misconstruction of our statements and policy. We would like very much to present the views of some one who takes the stand that the weights as now fixed are high enough and we hereby extend an invitation to the advocates of that theory to make use of our columns. A. P. J. is open to both sides.

---

HOPE, IND., March 7, 1901.

*Editor American Poultry Journal.*

Dear Sir: I have just read your editorial in March issue, "The Overweight Question Again." I have been carefully watching all articles along this line and am sorry to see some breeders, especially White Plymouth Rock breeders, so blind to their own welfare, and the welfare of the breed, as to want to cry down overweight birds.

Several seasons ago any one exhibiting White Rocks would be asked this question time and time again, "The Whites are not so large as the Barred, are they?" The answer was, "Yes, the Standard weights are the same," but the party would glance across the aisle at the "great big" Barred Plymouth Rocks and at once give their attention to the larger bird.

What a change today! At my recent exhibit at the great Chicago show, where I exhibited a string of the large birds, I had no trouble answering questions as to whether the White Rocks were as large as the Barred. In fact, the size of my birds (cockerels weighing as much as eleven pounds and pullets nine), together with the beautiful white plumage, neat low combs and true Plymouth Rock shape, made them the attraction of all that came down the aisle. It was no uncommon thing to hear remarks like this: "The White Rocks are large; I like them better than the Barred." "I never knew the White Rocks were larger than the Barred. I believe I will sell all my Barred and buy Whites," etc.

It is a conceded fact, and everyone interested in live stock of any kind knows that the trend of public fancy or demand is for larger cattle, hogs, sheep and poultry. Look at the cattle market and see which breeds are demanding the larger prices. It is not the small-sized breeds by any means, but the large Herefords or Short Horn or Polled Angus. Take swine for example. Does the little Yorkshire stand any show with the large Poland China. No, not a bit of it. Neither in sheep. Take turkeys. What is there that holds a candle to the mammoth Bronze? All turkey breeders must get large birds or they go begging for a buyer, while a thirty-pound young tom demands a good price any time.

We have in the White Rocks the best general purpose fowl on earth. Why not keep them ahead of anything else? Their greatest rival is the White Wyandotte, and the only advantage the White Rocks have over them is size.

Now here we find the American White Plymouth Rock Club at their meeting at New York show doing something to kill their own breed. The members there assembled passed a resolution to disqualify birds that were over weight, etc., claiming that getting a bird over weight reduced its commercial value. Now stop and consider. The idea of large birds injuring the commercial value! Which will bring the most on the market at 8 cents a pound, a six-pound White Rock pullet or a nine-pound one? Is getting 24 cents more on a bird injuring the commercial value of that breed?

As to layers, the best layers I have in my yards are hens weighing ten and eleven pounds. They have the frame, and if I should want to market them I can soon add on the flesh to make them bring the best price possible.

In getting large birds there is no need of sacrificing any good qualities of the breed. This is an age of progression, therefore why endeavor to kill the popularity of the White Plymouth Rock by such actions as that of the White Rock Club at New York?

Your editorial says: "The club is to be congratulated on this stand it has taken," etc. Are you endeavoring to hold the White Rocks of the modern type and large size back so the Wyandottes can pass us in the race for public favor? It looks so.

You call it a "senseless evil," breeding large birds. I beg to differ with you and call it a commercial improvement. You say the way to get birds to Standard weight is to hatch them at the proper time. All birds can not be hatched the same day or week, so what is the proper time? "And not by the selection of overgrown, fat and unsymmetrical specimens as breeders." In reply to this will say if you have birds of large size and frame they are not "overgrown," and you do not have to have them "hog fat" to get them to Standard weight. They are naturally there, so will make better breeders, and for the unsymmetrical part of it I refer your readers to the winnings of the large birds at the recent Indianapolis and Chicago shows and see what type won the prizes. I remember well how hard it was to get White Rock show birds that were up to weight. We used to get them hog fat; then before weighing in the show room you would see all the exhibitors poking meat and grit down their birds to gain weight. With the large birds there is no need of this foolishness and no need of fattening your birds to show them. I will admit the demand is for *large birds*, and it is hard to sell anything else. I saw the tendency to this two years ago and worked day and night and spent all kinds of money getting large birds. I have them and stand ready to defend them. If you want to kill the popularity of the White Plymouth Rocks pass a few more resolutions like that at New York and breed them with high Leghorn tails and little narrow bodies and you are ready for the funeral.

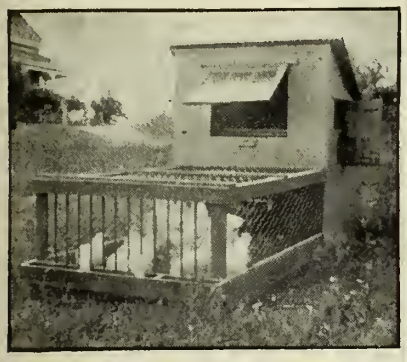
I believe in improvements and meeting the demands of the buying public. I am for larger and better White Plymouth Rocks and more of them.

U. R. FISHEL.

Winter scene—a southern view of E. F. Trask's Barred Plymouth Rock Farm, Beverly, Mass.

## PEEP O' DAY SPECIALTIES.

Practical poultry raisers always find the "Peep O' Day" brooders and Portable poultry houses are just what they are said to be in the advertisement. They have been carefully tested by the maker, Mr. E. F. Hodgson, at his plant in Dover,



Mass., and he never puts anything on the market unless he is confident that it will accomplish all that he claims for it. We are pleased to recommend both Mr. Hodgson and his specialties to our read-

ers, and know what business is intrusted in his care will be entirely satisfactory. The cut we show here is his No. 3 brooder, having all the latest improvements, and sells for $7. It is four feet long by twenty-six inches wide. The other cut is his No. 0 house, with run attached. It is complete in itself, has a feed trough, watering fountain, nest, roost and yard. It makes very comfortable quarters for a dozen hens. It costs but $14, and is shipped in sections, quickly put together with screws. The freight to most any place within 500 miles is less than $1. These two specialties are but a few of many he makes, and we would advise our readers to send for his catalogue, which may be had free for the asking. His address is Box 16, Dover, Mass.

E. H. and S. H. George, of Groveland Mass., are sending out a neat circular describing their White Plymouth Rocks. Their magnificent winning at America's largest show, Boston, places them right at the front in this variety. They have the following to say in regard to their mating this season: "We have eight grand breeding yards, each containing from nine to thirteen extra pure white females mated to prize males, our Boston and Haverhill winners, and in all these yards are our prize females. We have endeavored to have these yards as equal in quality as possible and they are all fine show birds, which will produce chicks that will make the owner proud and sure to win in strongest competition. We have no second quality and shall set eggs from all these yards ourselves." Mr. E. H. George, of this firm, is the well-known ex-president of the American White Plymouth Rock Club.

Mr. Geo. S. Duffin, of Hoopeston, Ill., is supplying his customers with eggs which we believe will produce winners for the shows next winter. Mr. Duffin is the Black Langshan specialist and in addition to his home bred flocks of the highest quality, he has imported some choice birds direct from A. C. Croad, Worthing, England. There is no doubt about the quality of the birds now in his breeding yards and we can cheerfully and unhesitatingly refer our readers to Mr. Duffin because we know that he not only has what he claims but he is a reliable, conscientious breeder and can be depended upon to treat his customers liberally in every respect. If you are in the market for Black Langshan stock or eggs it will pay you to write to Mr. Duffin.

Mr. Jonas Cullar, proprietor of Sunnyside Poultry Farm, East Lewistown, Ohio, has sent us some feathers from his Golden Wyandottes, and we take pleasure in stating that for perfection of markings their equals are seldom found. They have large, well shaped open centers of golden bay, and the lacing and color throughout show that they came from truly remarkable specimens. We know that our readers cannot go wrong in placing their order for Golden Wyandotte stock or eggs with Sunnyside Poultry Farm. Mr. Cullar also breeds S. C. Buff Orpingtons of exceptional merit. He will be pleased to send his circular free to all who write for it, mentioning A. P. J.

Mating fowls for best results is what every amateur should learn, and the only way to do so is to keep a record of the matings, so you will know what you are doing.

# 4 More Silver Cups 4

**Awarded to the "Nonpariel" Strain of**

# Barred Plymouth Rocks,

AMERICAN PLYMOUTH ROCK CLUB. MEMBER.

**2 at Cortland, N. Y., 1 at Rochester, N. Y., being the New York State Cup, and the National Club Cup at Chicago, Ill., for the best cock, hen, cockerel and pullet. This with 28 regular and 18 special prizes completes their record for season of 1901.**

We now have our yards mated, each headed by a winner of note from OUR WINNING STRAIN. All our prize birds are in these yards from which we will sell eggs at

**$3 per 13; $5 per 26.**

Satisfactory hatch guaranteed. **SPECIAL**—We still have 3 cocks and several cockerels, hens and pullets. The right kind at right prices, which with description will be gladly given,

# THE FANCIER IN THE POULTRY YARD

THOS. F. RIGG, Iowa Falls, Iowa.

An Indiana friend writes as follows: I would like to get hold of some line-bred Barred Plymouth Rocks. For several years I have been buying stock. I have purchased male birds from some of the most noted breeders, but cannot secure uniformity in the stock produced. Again I purchased a breeding pen. The stock produced by this pen was not uniform in color markings. Now, why cannot we line-breed Barred Plymouth Rocks, just as the other varieties are line-bred, and in time be able to produce extra choice pullets and cockerels from the same mating, have a uniformly high grade of stock, both in pullets and cockerels from this mating?

Our correspondent at once brings up the question as to whether or not it is best for Plymouth Rock breeders to use the single or double mating system. We think it can be stated as a fact that a very large majority of the breeders who annually win at the largest and best shows, the men foremost in the Plymouth Rock world are to-day, and have been for years, practicing the double mating system. That is they mate pens to produce pullets, and other pens to produce cockerels. These men are doing most of the winning and are securing the highest prices for their stock.

Now, this is the condition, as I am sure we all will agree. Whether or not it is the wisest course to pursue for this breeder or that breeder must, of course, be decided by each individual, but for that individual alone. That this system of breeding is retarding, seriously injuring the Plymouth Rock is a fact apparent to all. Looking across the whole field, with an eye single to the welfare of the Barred Plymouth Rock as a whole, I am convinced of this fact.

Will we ultimately get down to the single mating of Barred Rocks, and thus produce a large per cent of standard marked birds, birds that can be counted on to breed true, as is being done by breeders of other varieties? I hope we will. But the day when this will be generally done is quite distant, I believe. It will take several years yet to bring this condition of affairs about in the Plymouth Rock world.

In the four leading shows in America this year—Boston, New York, Philadelphia and Chicago—the Barred Rocks were second to the White Wyandotte. At Boston, once the hot bed of Barred Rock enthusiasm and interest, the Rocks were a small class compared with the Wyandottes. There were, too, more White Rocks there than there were Barred Rocks. These are facts that are, or should be seriously considered by Barred Rock breeders. They point to the great truth that any system of mating that causes an annual rejection of a large per cent of the stock produced is not one upon which any breed can be kept to the front as a show or utility bird. In this connection, in his report of the Boston show, Mr. Theo. Hewes, that able champion of single mating, and who proves his position by producing choice show birds and breeders thereby, has this to say:

"I insist that single and double mating advocates should get together, find out the truth and work together. This favorite variety of ours is worth looking after. It is without exception the best one on earth today, but it may be well to call attention to the fact that for the first time in the history of the Barred Plymouth Rocks in America they have a dangerous rival. They have a rival that is as good in quality, that is well introduced and popular, and that the past season has been more numerous at the poultry shows than the Barred Rocks. Of course I refer to the White Wyandottes. It does not seem possible that any other variety could take the place of the Barred Rocks, but the White Wyandotte breeders are hot on our trail and they stay in sight all the time. If we are going to foolishly throw away eighty-five per cent of our matings in Barred Rocks, as we have been doing, we are liable to be side-tracked somewhere while the White Wyandotte procession moves on."

Our Indiana correspondent must decide this question for himself. Temporary success is absolutely worthless. It is harmful to any man. Our advice, however, is that he begin at once, this season, to establish a strain of line-bred Barred Plymouth Rocks. As before stated, it will take some time to establish such a strain, for in 99 per cent of the Barred Rocks of today the blood lines are all confusion. There are practically no well established blood lines. This is why, my reader, that high scoring male bird you bought at a long price has not given you uniform stock when mated in your yards. There were no fixed blood lines there. He came from a mating that produced but a small per cent of good birds. Our friend should secure a male that is as near all standard requirements as possible. Also a like female, and with these begin line-breeding. These two birds, typical of all that is good in the breed, will prove a sure and sound foundation upon which to build a line-bred strain. The first year's mating will not, cannot, give a large per cent of choice birds. There is no fountain head to draw from in this mating, beyond these two specimens, for back of them all has been confusion in blood lines.

I am firm in the belief that the general adoption of this system of mating and breeding is the only thing that will save to us the Barred Plymouth Rock as America's foremost fowl. There is pleasure, profit and renown for the men who will thus handle this fowl. They will soon find that they are not alone. No man in this world can advance alone. He will seek for, and be sought by other men of merit. With this co-operation the problem will be solved, in time.

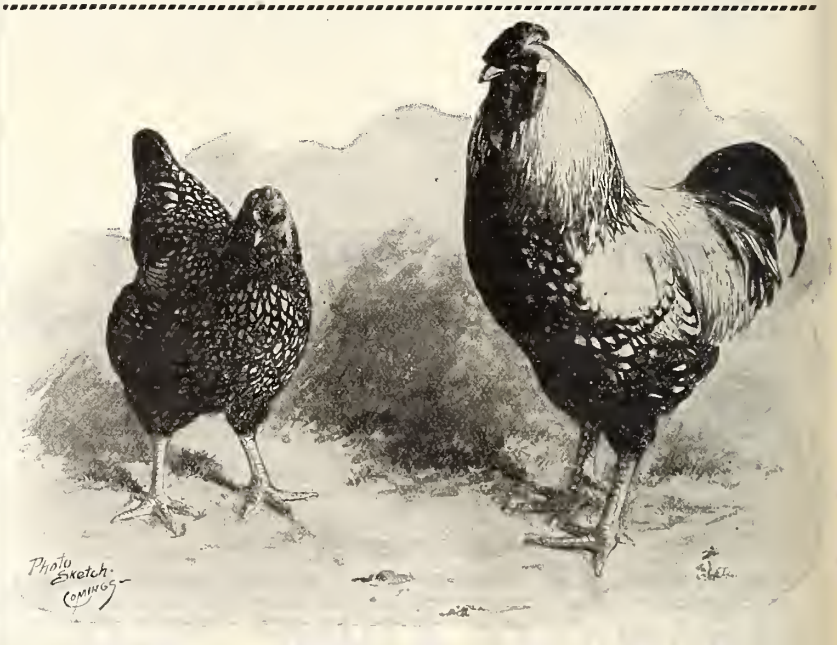
## TRANSFER.

This is to certify that I have sold my entire interest in the firm of Bowlus Bros., Fremont, Ohio, breeders of M. B. turkeys and Barred Plymouth Rocks, to Richard P. Bowlus, who will continue the business.

(Signed.) FLOYD G. BOWLUS.

## B. H. WHITE, BATTLE CREEK, MICH.

In the description of Mr. B. H. White's 96-point Houdan hen last month his old address at Peoria, Ill., was given in error. Mr. White has for some time been located at Battle Creek, Mich., where he has established a large plant and where he can take better care of his constantly increasing trade.



First Hen at New York, January 25, 1901. 1st Cock at Chicago, Same Week. Both were in First Prize Pen at Pittsburgh, February 18, 1901.
OWNED BY T. E. ORR, PROPRIETOR BEAVER HILL FARM, BEAVER, PA.

Beaver Hill Farm has shown 22 different Silver Wyandottes this season at Indianapolis, Hagerstown, Philadelphia, Chicago and Pittsburgh, winning in hottest competion, 27 regular and special prizes, including the $10 Color Prize on Cock at New York and the Gold Special on Cock at Chicago. Booklet covering our 21 years experience with Silver Wyandottes, free.

## Collin's White Leghorns.

Mr. N. R. Collins, of Rootstown, O., is an A. P. J. advertiser who can make business interesting to anyone who breeds C. White Leghorns. He breeds this variety exclusively and has a flock of about 600 birds, which for fancy points and practical utility qualities has no superiors. At the Cleveland show in January he won first and third on cocks, second hen, first cokerel and first pullet, making three out of five firsts in the strongest competition ever found at the Cleveland show, and that means a great deal. He has paid special attention to the development of heavy layers and his birds are noted for this desirable characteristic. We have seen testimonials from some of his customers and know that he pleases those who intrust him with their orders. His price for eggs is $1.25 per setting, which is really less than half what they are worth. When a breeder can step into Cleveland and carry off the creamy prizes in the competition which Mr. Collins met he is most assuredly selling eggs at less than their value when he places them at $1.25 per setting. We predict that at this price he will not be able to fill the demand even though he has several hundred layers. Mr. Collins is not a new breeder, but has had experience which makes him competent to select and mate his best birds. He is a retired business man who makes the poultry business a pleasure and recreation.

---

BLUFFTON, OHIO, Feb. 12, 1901.

This is to certify that I have this date privately scored and mated up for Mr. H. E. Rinehart, West Cairo, Ohio, one exceptionally fine exhibition pen of White Plymouth Rocks. The cockerel in this pen is a crackerjack, reaching the remarkable score of 95½. He is mated to 10 females nearly his equals, scoring from 92 up to 95 honest points. I also recommend Mr. Rinehart to the public as an up to date breeder and fancier.

D. J. KOHLI, Judge.

---

Plymouth, Ind., Dec. 17, 1900.

Mrs. E. I. Reynolds, Haskells, Ind.:

Dear Madam—I received the cockerel last Tuesday and am well pleased with him. I do not think I ever bought anything I was as well satisfied with as I am with him. I now want your price on a hen to match with him. Yours respectfully, H. A. ARMSTRONG.

---

Vesto, Ind., Jan. 28, 1901.

Mrs. E. I. Reynolds, Haskells, Ind.:

Dear Madam—If you remember, I got two settings of Buff Plymouth Rock eggs of you last spring. I hatched twenty-two chicks, raised twenty-one to quite a large size. Something caught a few, but I have eleven pullets and four cockerels of as fine color as I ever saw. I think I have done well. Please send me description and price of a first-class cock bird. Yours respectfully, BELLE LONG.

---

Victor, Ill., Feb. 18th, 1901.

Mrs. E. I. Reynolds, Haskells, Ind.:

Dear Madam—The birds arrived at Leland Friday evening at 6:45 in good shape; combs did not get frosted ,as I was afraid they would. Am well pleased with the cockerel and pullets. Think you did well by me. You have given me more than my money's worth. Trusting that this, our first deal, will not be our last, I am, yours for the Buff Rocks,

JOHN J. WARREN.

---

We would like to call the attention of those of our readers who are interested in Golden Wyandottes to the adv. of A. W. Davis, Big Rock, Ill. Mr. Davis certainly has some remarkable specimens of this variety and can send out birds which are right at the top in quality and which will produce winners. He has bred his birds with the sole idea of getting the best and he has succeeded in getting them to a point about as near perfection as can be reached. His yards are headquarters for exhibition birds of both sexes and he enjoys a large trade from many fanciers who win annually at the shows. He is selling eggs now from his finest specimens and those who place an order with him will make no mistake in so doing.

---

C. N. Bliss, of Minneapolis, Minn., has disposed of all his Black Minorcas, and in future will breed Barred Plymouth Rocks exclusively. He is well prepared to handle a large business this season, and gives prompt attention to correspondence and orders.

---

For the next fifteen days J. Q. Vandermast, Jr., & Co., of Monroe, Iowa, are offering eggs at the reduced price of $1.50 per setting. They breed Barred Buff and Pea Comb Plymouth Rocks. Their regular price is $2, and they have only a limited number of eggs to sell at the reduction. They state that the male birds heading their pens are worth from $25 to $35, and they are mated for best results.

***Taylor's Remarkable Record on Bronze Turkeys.***

Winning sweepstakes at Chicago's great shows three years in succession. Show birds a specialty. Stamp if convenient.

**S. H. TAYLOR, Sibley, Ill.**

President National Bronze Turkey Club. (Poultry Judge.)

Mr. Frank Anderson, of South Whitley, Ind., is giving his customers great value in eggs at $2 per setting. His birds are not only prize winners but they are heavy layers of large eggs. He breeds Black Minorcas and Silver Wyandottes, and we know that his stock is high-grade in every respect.

Mr. John J. Warren, Box A, Victor, Ill., is better prepared than ever before to please his customers in quality of stock and eggs which he sends out. He is a Buff Rock specialist and knows how to breed good ones. He has an enviable reputation for fair dealing, and we can conscientiously recommend him and his stock to our readers. He is selling a limited number of eggs from his best hens, and he and his customers will again be heard from in the show room next season.

Philip H. George, of Braidwood, Ill., is offering eggs from his Light Brahmas at $1 and $2 per setting. His birds are pedigreed layers as well as prize winners. He uses trap nests and keeps a record of the individual specimens. His birds are hatched with a view to having them start laying in October and he succeeds in getting from 100 to 150 eggs per bird by the following June without the layers becoming broody. They are then fed to induce broodiness and are allowed to set and brood their chicks, somtimes raising two families before winter. This gives them a good rest and is very beneficial. The chicks from such birds will inherit the laying qualities and will be strong and vigorous. Mr. George thinks it is a mistake to breed from pullets that have been laying all winter without a rest and his success in getting plenty of eggs which produce vigorous, healthy, prolific layers is pretty good evidence that his theories are correct. He gives all orders careful attention and makes prompt shipments.

Mrs. A. J. Colvin, of Milton, Ill., whose ad. appears elsewhere in this issue, writes us that her stock is all sold, and she wishes to thank her many customers for their very liberal patronage, and to say to those whose orders were returned because of not having birds to fill same that she hopes to raise enough good stock this season so that every one shall be supplied. She respectfully solicits the patronage of all during the egg season. She ships eggs from very choice matings and guarantees satisfaction in every case.

Under date of March 18, 1901, John Watt and Mrs. S. E. Campbell, of Lacon, Ill., write that their stock was never better than now and they make a specialty of Barred Rocks of the laying kind and still retain shape and standard size. Last year they hatched 54 (raised 48) chicks from one special hen from April 3 to July 10, and one of the pullets has to date laid 28 eggs since Feb. 8. See ad. elsewhere.

E. F. Trask, of Beverly, Mass., won at Beverly as follows: Buff Plymouth Rocks, 1st cock, 1st cockerel, 1st pullet, 1st pen.

Fred E. Pile, of Cleveland, O., won at Chicago as follows: On White Wyandottes, 2d hen, 2d cockerel, 5th cock, 2d breeding pen; $10 in gold for 2d best display.

O. E. THOMPSON & SONS.

The Banner Root Cutter, No. 7, which is manufactured by O. E. Thompson & Sons, Ypsilanti, Mich., and which is being regularly advertised in these columns, is especially designed for preparing roots and vegetables for consumption by poultry. We say "preparing" roots, etc., designedly, as we wish to draw a distinction between cut roots and those prepared by this machine. As a matter of fact it does not cut the roots and other substances at all, but, by an ingenious construction of the knives,

which are of two widely different kinds, they shrive off half-round ribbon-like pieces of the root, which are easily and greedily consumed by fowls of all sizes. The method of preparation avoids entirely the possibility of any choking. We need not here dwell upon the advantages of feeding roots and vegetables to poultry, for it is a subject well understood by our readers. We are glad therefore to be able to point out a means of their easy and perfect preparation. Write the Thompson people for circulars which fully illustrate the machine and the form of its product. Kindly mention our paper in writing.

—o—

OAKDALE, PA., March 20, 1901.

*Mr. Walter A. Vonderleith.*

DEAR SIR: The birds arrived in good shape the 15th and I am very well pleased with them. Do not think I could have secured as good for the money from any one else.

The editor of our paper, the *Times*, has written a squib about them. Will send you a copy. Very truly,

C. J. VANCE.

C. W. Browning, Portland, Mich., is sending an illustrated circular to all applicants. It describes his matings of Silver Golden and White Wyandottes, and gives his show records. His prices and quality of stock justify the time and postage it requires to send for his circular if you are interested in his varieties.

B. J. Lucas, Danville, Ill., has a change of adv. in this number and states that he has added some good birds to his high scoring pens already mated and that he sells eggs from either variety that will please customers. He breeds Buff Wyandottes and Buff Leghorns and his show record proves that he has good ones.

MAJESTIC STRAIN

**White Wyandottes**

There are no handsomer, more profitable birds in the world than the White Wyandottes. My stock is farm raised from prize winners at big eastern shows. Yearling stock ready for shipment, a limited number of pullets and plenty of cockerels. **Score Cards by Judge J. Y. Bicknell.**

At Rochester, N. Y. poultry show was first on cock; first and second on hens; first and fifth on cockerels; first on pullets; first on pen, besides specials. I guarantee satisfaction in every particular.

**EGGS FOR HATCHING**

from stock scoring 93½ to 96½ points; one setting $5.00, two settings $8.00. A trio of pedigreed Belgian Hares for sale.

**C. S. Wetmore,** Box 877 **Lockport, N. Y.**

**Eggs, Eggs, Eggs, Eggs.**

# A Guaranteed Incubator Sold on Trial.

A chicken is a chicken the world over, but an incubator is not always an incubator. Sometimes it is only a box with legs to it and made only to sell. Only an incubator that incubates is an incubator, and one must always bear this most important point in mind when spending his or her money for a machine. Now, the question may arise in your mind: "How am I to find out about a machine? How am I to choose a really good one?" All the numerous manufacturers claim to have only the best. One claims to hatch every fertile egg. Another guarantees to out-hatch all others by 15 to 20 per cent. One says that the hot air system of heating is the only system. Another claims all for hot water. Another claims a string of letters patent as long as your arm on a seven-eighths-inch auger hole, and calls it a patent system of ventilation. Another claims to have cut the hole out, as being obselete. Some claim to be able to save human life by incubating babies, and we would not be surprised to hear of some one's hatching billiard tables out of pool balls one of these days. Some claim "no cold corners—no hot centers." Others claim the same thing in different words. All seem to have an unlimited number of testimonials and first premiums in wagon load lots taken over all competitors at the county fairs and poultry shows. You get a number of catalogues and read carefully a multitude of contradictory braggadocio statements until you are hopelessly tangled and, figuratively speaking, "up a tree" as to what machine you ought to buy. The question will doubtless arise in your mind, "How can I hope to choose a really first-class and satisfactory machine without first trying it?" The Hawkeye Incubator Company, of Newton, Iowa, manufacturers of the Hawkeye Full Line of Incubators and Brooders, by their method of conducting their business admirably do away with all of this confusing and annoying argument by simply saying: "First try our machine and then, if satisfactory, buy it." We quote from their guarantee appearing on the first page of their catalogue: "Our guarantee is not limited by provisions or conditions of any kind or character. Perfect satisfaction to every purchaser is guaranteed by his being given the privilege of testing the machine for thirty days and then returning it to us if it does not please him in every particular." They do not ask pay for their machines until you have first tried them and are satisfied. This eminently fair way of doing business could not help attracting patronage, and we are glad to know that they are having a splendid trade. They are situated in the center of the state, after which their machine is named—Iowa—and besides having a very large and well-equipped factory they also own and conduct their own experimental poultry farm, which gives them an opportunity of perfecting their machines in every detail before they put them on the market. Mr. F. H. Bergman, manager of the concern, probably has made a study of the poultry business in more countries than any other man in the business, as he is an extensive traveler, having visited over forty different countries within the last fifteen years. He is a practical incubator man, looking after the manufacturing business himself personally, besides giving personal attention to the correspondence, and is always glad to hear from people in regard to their machines, whether they sell them or not. These people have come to the front with their machines in a remarkable way this season, as their most liberal method of doing business has appealed to fair-minded people as being a correct method. They have manufactured their incubators for several years, and while at first they did not go into it on a large scale but rather preferred to perfect their machines in every detail before putting them on the market extensively, yet they are now doing an enormous business. They have ample capital to conduct their business and are perfectly reliable and well-rated in all the commercial agencies. Should you be interested in their line we can most cheerfully recommend them to you. Address Hawkeye Incubator Company, Newton, Iowa.

This is a fair specimen of the kind of letters the Hawkeye Company receive from their customers:

Woodland Fishing and Hunting Resort,
Cedar Lake, Ind., March 5, 1901.

Hawkeye Incubator Company, Newton, Iowa.

GENTLEMEN: You have not asked me for a testimonial, but I am so well pleased with the 200-egg "Hawkeye" and brooder that I feel like writing you anyway, as you must like to get good reports from your machines.

When the incubator came we couldn't find any directions, and as we never even saw an incubator before we thought we were up a stump until we could hear from you. But the machine looked so simple I thought I'd try it anyway, so got some store eggs and set her going the best I could. We had no trouble in getting up the right temperature and keeping it there. Our friends had a good deal of fun with us, and said it was a shame to waste good eggs that way, etc., etc., and, to tell the trutb, we didn't expect to get many chickens, but, lo and behold, on the twenty-first day that incubator fairly swarmed with little chicks. I would almost be able to make affidavit that it hatched every fertile egg. We are more than pleased with it, and have re-set it with high-priced Wyandotte eggs, so, you see, we have confidence.

Your free trial plan is a splendid way of doing business and you deserve a big patronage. Yours truly,

SOPER & HODGE.

BUFF WYANDOTTE COCKEREL.
Owned and bred by W. R. Wooden, Battle Creek, Mich.

## "PRINCE GEORGE."

Buff Wyandotte cockerel owned and bred by W. R. Wooden, Battle Creek, Mich., has taken first prize at three prominent Western shows this season including the Chicago show, where there was a class of 134 Buff Wyandottes, the largest show of Buff Wyandottes ever held. The bird is a grand specimen, as shown by his record, and is the result of intelligent line breeding. He is the son of Prince Charles, another fine specimen from Mr. Wooden's yards and also a prize winner of two seasons, with a record of three firsts in succession.

An occasional good bird may fall to the lot of any breeder, but a succession of them year following year is only the result of thoughtful and skillful mating. Mr. Wooden has sold a large number of cockerels this year, pen brothers of Prince George, sired by Prince Charles, including seven of them at long prices. He has Prince Charles mated for 1901 again in his male line, and Prince George, the subject of cut, in his female line.

If chickens can be counted before they are hatched he feels confident of making it interesting for competition another year.

## SPRAGUE COMMISSION CO.

One of the most extensive commission and poultry supply firms in the United States is the Sprague Commission Co., with headquarters at 218 South Water street, Chicago. This firm is located in sixteen of the most prominent cities of the country, as will be noted by referring to their advertisement elsewhere in this issue. This is the leading produce commission house in Chicago and they claim to handle more poultry supplies of every description than any house in the west. They make a specialty of poultry and eggs, but they also handle butter, veal, game, hides and other farm products. No shipment is too small to receive their attention, nor none too large for them to handle properly. Our readers may write or send orders and shipments to the nearest branch. The addresses will be found in their adv.

$50.00 sweepstakes cup for highest scoring pen, all white varieties competing, won on White Wyandotte pen. Score 191¾ at Louisville, Ky., state show, Jan. 14-19, 1901, by R. E. Jones, Flat Rock, Ind. Mr. Jones has never been defeated on White Wyandotte pen at Kentucky state show, this being his third show there.

Paul Wagner, of Louisville, Ky., won at New Albany, Ind., as follows: S. C. B. Leghorns, 1st and 3d pen. 1st and 2d hen; 2d pullet, 2d cock; also special for largest number of birds in this class, scoring 90 points or more; showed 11 birds: Black Minorcas, 1st pen, 1st cock, 1st cockerel, 1st, 2d and 3d hen. 2d pullet; 6 birds shown. Houdans, 1st pen, 1st cockerel, 1st cock, 1st and 2d hen, 1st pullet; 6 birds shown. Buff Cochin Bantams, 2d pen, 2d cockerel, 1st and 3d hen; 5 birds shown. Black Cochin Bantams, 1st pen, 1st cockerel, 1st and 2d pullet, 1st and 2d hen; 5 birds shown. Special for highest scoring bird in show, 96½ points pullet and one for second highest scoring pen in show from this variety. In all he showed 33 birds, winning 29 regular premiums and 11 special ribbons, or a total of nine yards of ribbon.

James K. Page, of Indianola, Ill., won at Georgetown, Ill., as follows: Barred Plymouth Rocks. 1st, 2d and 3d pullet, 2d hen, 3d pen; A. B. Shaner, judge.

J. N. Hutton & Son, of La Porte, Ind., won at Southwest Michigan Poultry Association, Kalamazoo, Mich., as follows: Black Leghorns, 1st pullet, 1st cockerel; White Plymouth Rocks, 1st cock, 1st hen.

## *Little of Everything Continued.*

*Feeding.*

Our plan is to give a light feed of grain for breakfast; same at noon, with a full feed at night. Grain is always given in straw. We use wheat, oats and corn for grain, with middlings, beef meal, clover meal and oil meal for a soft feed. This we feed every other night for a part of the evening meal, allowing about a half feed, giving whole grain for a balance. Soaked or boiled oats are used part of the time.

G. M. WHITFORD.

Arlington, Neb.

———o———

*Advice to Beginners.*

Select some good all-purpose breed, such as the Rocks or Dottes, buy the best you can get regardless of price. showing our birds, buying good literature, and last but not least securing the best stock. Let us be willing to patronize a business that can bring out 90-point birds. And if the specimen by the score card fills the place we have for it buy it at a liberal price and give the breeder a profit that shall enable him to build up, and add not only credit to himself, but to the entire work.

MRS. J. H. OREBAUGH.

Batavia, O.

———o———

*Proper Mating.*

A great deal has and is being said in reference to line breeding as being the one essential in breeding fowls up to Standard requirements in which I am a stanch believer, and practice same in my yards. But experience has taught me that line breeding will not accomplish best results alone, no matter how fine a yard of females we may have;

S-c. B. Leghorn Nina I. Bred and owned by A. D. Coleman, Belding, Mich.

Read all the poultry journals you can. Remember that cleanliness is next to Godliness also in the chicken business. Show your birds at some of the good shows. You will learn much. But not at comparison shows. If you don't succeed the first time, try, try again.

A. C. LE DUC.

Cbenoa, Ill.

———o———

*Values.*

Shall we associate the commercial value of poultry with the relative value of the Standard bred fowl, value, as regards the time and money it requires to produce a really fine specimen, and carry on a business that will attract the people. A strictly first class breeder or fancier must recognize the fact that to make the poultry work a progressive and up-to-date business, much money must be expended, in the way of advertising, we can't expect best results unless they are properly mated and vice versa. Let us hear more about proper mating through the AMERICAN POULTRY JOURNAL.

W. H. FISHER.

Lafayette, Ind.

———o———

*When and How to Feed Mashes.*

The question is raised among breeders of fancy poultry as to the best time to feed warm mashes. Some have the idea that evening is the best time, while others hold to feeding it in the morning. Now, as to ourselves, we feed it in the morning. Tbe ben comes from the roost in the morning hungry and must necessarily have something that quickly digests and warms up her body, after which she will commence to scratch in the litter for the small grain which was not picked up the evening before. This gives them exercise after their warm meal, and will be the means of filling your egg basket. At noon you can then feed a little wheat in litter and at night a full meal of whole grain.

J. Q. VANDERMAST, JR.

Monroe, Iowa.

———o———

*Setting Hens.*

When using the hen for incubation we usually set two or more at the same time. When the chicks appear we give them to one hen and reset the others, adding one or more to keep up the number. At the end of another three weeks give the chicks to those that have been setting the longest and proceed as before. Six weeks is a long period for a hen to set, but give her good feed and care and she will get through nicely.

W. L. MILLS.

McNabb, Ill.

———o———

*Hatching Chicks.*

A great many people hatch their chicks too early and then when tbey have bad luck with them they do not know where to lay the blame. The reason is the weather is too cold. We were discussing this problem with a breeder recently and he said, "Give him cbicks hatched early." He always lost a good many, but he keeps on with the same work. We like to have our chicks batched in March and April. This is early enough for us.

C. L. HOGUE.

Battle Creek, Micb.

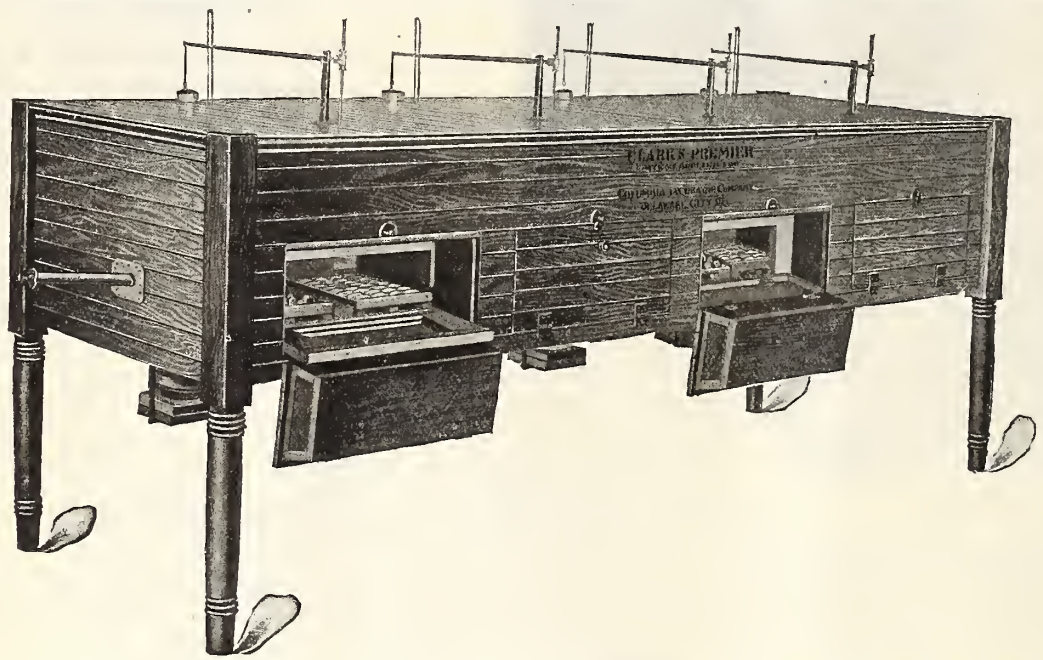
## Do Incubators Pay.

Every mail brings to our office many inquiries such as these: Do incubators pay? Are brooders necessary? What pays the best, ducks or chickens? Do capons pay? What is the best food for poultry? Of course, it would be impossible to answer all these in full in the limited space allowed to each contributor to these columns, but we will endeavor to give a little general advice on the more important queries and will be glad to hear from your subscribers who may desire full information on any subject related to hatching and rearing poultry.

First, if you have 200 eggs and have a good incubator, it is reasonable to expect that in three weeks after you start up your incubator will have 150 to 160 healthy chicks or ducks. Should you set these eggs under hens, you would first have to hunt up fourteen or fifteen old setting hens. Then, after making up the nests and getting the hens started, you would have to attend and feed the hens for three weeks while on the nest and six weeks longer while attending to the chicks, and the net difference in cost is the difference between 20 cents' worth of oil for the incubator, plus 30 cents' worth of oil for the brooder, and what it costs to feed fourteen or fifteen hens two weeks while getting ready to set, three weeks on the nest and six weeks raising the chicks. The advantage of the brooder over the hens is that when raising chicks with an incubator it is hardly possible to get hens enough to take all the chicks. Also a large number of chicks in a brooder can be fed and attended to much easier than the same number with hens. Then hens are almost sure to have vermin on them, and of course these get on the little chicks, and every one knows that vermin kills more chicks than anything else. In a brooder where cleanliness is observed you are seldom troubled with vermin, and if you are they are more easily exterminated than on the mother hen.

Do capons pay? About half the chicks in any flock are males. If they are early, so to be fit for "broilers" in June or July (you should always dispose of them at the high prices then obtainable), you will make more money selling your 2½- or 3-pound cockerels at 25 or 30 cents per pound than by selling 5 or 6-pound roosters at 10 cents per pound in late fall or winter. But should your chickens be too late for young broilers before the market is over, then by caponizing same you can more easily get 18 to 30 cents per pound for same than you can 8 cents per pound for old roosters. Again, while the capon does not grow much, if any, faster than the roosters do the first four or five months, after that they take on flesh much faster for the same amount of feed, are hardier, take less attention and more can be kept on the same size lot.



Best foods for poultry: The proper food for egg production can better be given in four tables, to be given on alternate mornings, based on a flock of 300 fowls. We are presuming that the fowls are yarded:

## MR. J. D. KEYWORTH, OF EVANSTON, ILL., CHANGES HIS LOCATION.

I wish to announce to my friends and customers that on May 1 I will move back to my former home at Sandy Hill, N. Y.

I will continue breeding Buff Rocks and on a larger scale than ever. I will take my brother into partnership with me on a farm of 110 acres and we will spare no time or expense in proving that our golden buff strain is second to none. Our farm is only ten minutes' drive from the post and express offices, which will enable us to pay prompt attention to all orders and correspondence.

To my old customers I wish to say that you will receive the same attention as before and you will get even better stock than ever for the money you invest with us. And to the amateur and other breeders that are looking for good stock, will say that we would like to have you get our prices before buying elsewhere. We always guarantee satisfaction. prompt and courteous treatment to all.

J. D. KEYWORTH,

After May 1: KEYWORTH BROS., Sandy Hill, N. Y.

# Wheeler's Barred Rocks are Winners

At Greenville Show, Dec. 25-28, 1900, in a big class, I won 1st ckl., 1st pul., 1st hen, 2d, 3d ck. and 2d pen; also 2 specials. At Cedar Springs Show, Jan. 1-4, 1901, 1st, 2d ck., 1st, 2d, 3d hens, 1st, 2d, 3d ckls., 1st, 2d, 3d puls., 1st pen: also 4 specials. A few good bargains in ckls. and pullets with score cards from J. A. Tucker, judge. Eggs in season $2 per 15; $3.50 per 30. Illustrated circular free.

**E. W. WHEELER, Box 378, Cedar Springs, Mich.**

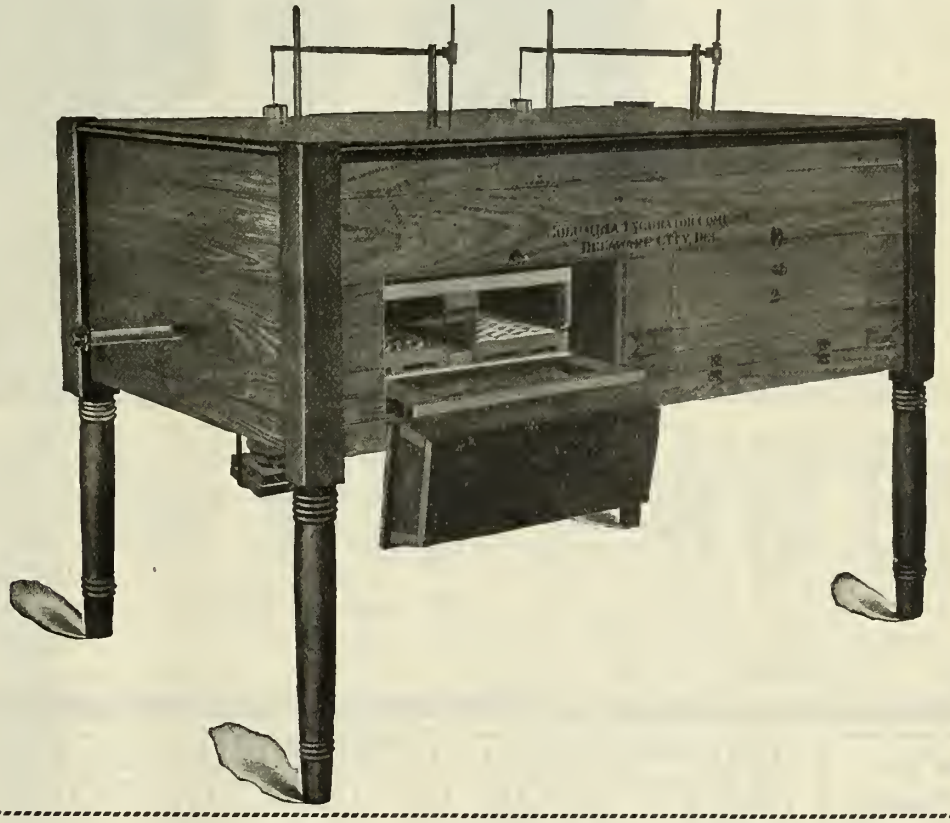
Mr. I. T. Bryant, of Oxford, O., writes that he has four grand yards of Buff Rocks mated for the egg trade this season. His birds are farm raised and are large, strong and vigorous. He sells eggs from his best birds at $2 per setting of 15. His best females score as high as 95½ and he has won many prizes in strong competition.

The catalogue for 1901 of the Ouachita Valley Poultry Farm, Camden, Ark., is now ready for mailing, and will be sent free to all who write and mention A. P. J. A most unique poultry souvenir will also be sent with it. The catalogue is a handsome 20-page illustrated booklet and is probably the finest ever issued by a southern breeder. It contains much information that will prove of value to every poultryman and fancier.

Fowls are very fond of milk and thrive well upon it. Sour milk will bring better returns in eggs than in any other way it can be fed.

George Stelzer, of Oshkosh, Wis., won the following prizes at the Wisconsin State Show at Oshkosh January 14 to 19, 1901: Pea Comb White Plymouth Rocks—1st cock; 1st, 2d, 3d, 4th and 5th hen; 1st, 2d, 3d and 4th cockerel; 1st, 2d, 3d, 4th and 5th pullet; 1st and 2d pen; best display and best collection. Buff Wyandottes—1st cock; 1st and 3d hen. Buff Rocks—3d pullet; 3d cock; 5th hen. Buff Leghorns—1st cock; 2d, 3d and 4th hen; 2d and 4th cockerel; 3d and 4th pullet.

James Hankinson, Maroa, Ill., informs us that he has a few fine breeding birds yet for sale in Light Brahmas, Buff Cochins and Barred Rocks. He has reduced the number of birds in his breeding pens and the average score of the pens is therefore higher, which gives his customers better value for their money. His breeding birds are all in fine condition and are laying heavy. His eggs are unusually fertile and the indications are that his customers will not only get some fine chicks but will get lots of them.



BEACONSFIELD, ILL., March 10, 1901.
WHITE'S FEATHERED STOCK FARM, Battle Creek, Mich.

Dear Sir: The pen of Barred Plymouth Rocks arrived all right, and to say that I am pleased does not express it. They are the best I have ever seen. Wishing you the success you so well merit, I am, yours truly,

BEACONSFIELD STOCK FARM,
R. R. Waugh, Prop.

———o———

E. J. Horton, of Alida, Ind., won 1st cockerel, 93, in class of 42 and 4th pullet, and had he entered for it would have won 1st pen on Barred Rocks; on S. C. White Leghorns won 1st cockerel 94¼ and 4th pullet, also 2 specials, winning 6 ribbons on 8 entries.

**F. M. Hereford & Son,**
EXCLUSIVE BREEDERS OF
**S. C. Black Minorcas and Rufus Red Belgian Hares.**

We have ten strictly fine breeding pens of Minorcas. Eggs from pens 1, 2, 3 and 4, 15 for $2.50; from pens 5, 6, 7 and 8, 15 for $2.00; from pens 9 and 10, 15 for $1.50. 32 Belgian Hares for sale—good ones.

F. M HEREFORD & SON, Fulton, Mo.

## OUR LARGE POULTRY SHOWS.

We give below a condensed record of the Philadelphia, New York, Chicago, Boston and Crystal Palace (England) shows. There may possibly be a few errors in some parts of this, because premium lists and catalogues are not complete, but these errors are so trifling as not to detract from the totals.

| | ENTRIES. | | | | |
|---|---|---|---|---|---|
| *Classes—* | New York. | Chicago. | Boston. | Crystal Palace. | Philadelphia. |
| Asiatic | 154 | 198 | 314 | 386 | 510 |
| American | 549 | 621 | 639 | 710 | 378 |
| Mediterraneau | 171 | 292 | 342 | 230 | 451 |
| Polish and Hamburg | 67 | 86 | 42 | 214 | 100 |
| French and English | 64 | 47 | 18 | 48 | 332 |
| Games of all kinds | 73 | 184 | 164 | 36 | 456 |
| Bantams | 70 | 310 | 195 | 262 | 628 |
| A. O. V. | 11 | 56 | 49 | 57 | 518 |
| Turkeys | .. | 49 | 73 | 20 | 43 |
| Geese and ducks | 146 | 74 | 60 | 136 | 290 |
| Pets of all kinds | 172 | 350 | 254 | 544 | 623 |
| Exhibition yards | 99 | 123 | 96 | 163 | ... |
| Displays | 15 | 63 | 1 | 122 | ... |
| Pigeons | 38 | 1119 | 1413 | 1794 | 3509 |
| Dressed poultry and eggs | .. | ... | ... | 474 | 20 |
| Totals | 1629 | 3572 | 3660 | 5196 | 7859 |

E. & O. E.

American classes include Rhode Island Reds.

Breeding yards counted as oue entry.

Philadelphia offered some twenty-five or thirty cups, besides silver and bronze medals.

New York offered about the same number of cups and quite a number of other valuable articles, also diplomas.

Chicago offered many cups, medals, special badges and other merchandise.

Boston offered over fifty cups, and in addition to this many special awards of merit.

The individual specimens contained in exhibition yards and displays would add considerably to the total number at each show; if they were all numbered and counted as at the Crystal Palace show Boston would fully equal them in the aggregate display.

T. F. McGrew.

## FRY & BRANNEN'S HOOSIER DUCK FARMS.

Forty miles south of Indianapolis, Ind., are located the duck farms of Fry & Brannan, where from 200 to 500 of their mammoth Chinese Pekin ducks are produced each season. The plant is an ideal one and the birds are raised under natural conditions from large, vigorous standard-bred stock. Their birds in the hands of customers have won at some of the leading shows of the United States and the firm themselves have been heavy winners in the strongest competition. The demand for their strain of ducks is constantly increasing, and each season they are compelled to carry over orders to be filled the next, as they positively will not fill orders by purchasing stock and eggs elsewhere, as is often the case where breeders have more orders than they can fill. The best of stock and fair and honest dealing is a combination that has made this firm one of the leaders. Their address is Hope, Ind., and our readers can obtain a finely illustrated catalogue by addressing the firm and inclosing a 2-cent stamp.

Pair of Mammoth Chinese Pekin Ducks. Weight 24 pounds. The drake is a two-year-old bird and scores 98. Duck three years old and scores 97. Bred and owned by Fry & Brannen, on Hoosier Duck Farms, Hope, Ind. This pair won first at the late Indiana State Fair.

*Buff Orpingtons.*

It's an eye-opener to breeders the way Orpingtons are forging to the front. The larger shows contained some extra fine exhibits the past winter, birds scoring to 95. We have a cockerel weighing 11 pounds, which shows how large they grow. Pullets begin to lay at five months old and are extra layers. That they are what fanciers want is shown by the immense demand for them. Breeders are simply deluged with orders for stock and eggs.

Thos. H. Mills.

Port Huron, Mich.

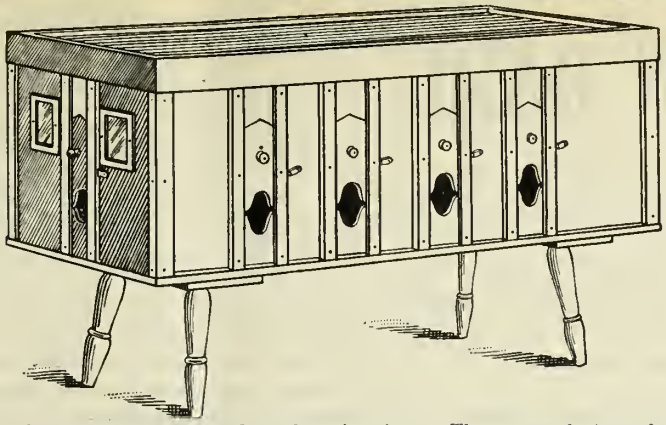
**How to Build Poultry ..Houses..**

# THE NEWEST, BEST AND MOST COMPLETE BOOK OF INSTRUCTIONS ON HOW TO BUILD POULTRY HOUSES, FIXTURES, INCUBATOR HOUSES, Etc.

Half the success with poultry is in proper housing. Any old thing with a roof will not bring best results. Many people fail for this reason and wonder why it is. This book does away with all experimenting. You don't have to guess at anything. You get the results of years of experience and thousands of dollars spent in trying different plans of houses. There is no worrying, no scheming, no doubt, about the proper amount of space and interior arrangement. Everything is illustrated and thoroughly explained. The value of this book cannot be appreciated without a perusal of it. **It is of great value to the small breeder with a few fowls, and to the large breeder with his hundreds.** No time or expense has been spared to make it complete. Price 50 cents, postage paid.

This book will be given with a 15 months' subscription to American Poultry Journal for 75c, or will be given free for four subscriptions.

Address AMERICAN POULTRY JOURNAL, - - 325 Dearborn Street, CHICAGO, ILL.



We would suggest to our readers that they send to B. Coddington & Co., Berea, Ky., for one of their circulars describing their poultry and animal fumigator, which is advertised in this number of A. P. J. The above illustration is of their sectional machine made to accommodate 10 fowls. It is 60x22x22 inches in size. They manufacture four sizes ranging in capacity from one to ten birds. The method of using the machine is very simple, the fowl being quickly placed in position and fastened in the machine, the fuse lighted, the lid closed and in five minutes there will not be a living louse or nit upon the bird. The firm claims that the germicide used in the machine is not only sure death to lice, ticks, mites, fleas, and all insect pests, but is the only preparation yet discovered that will effectually destroy the nit without injury to the fowl or animal receiving the treatment.

---

Almost every part of the globe is represented in *Scribner's Magazine* for March, and in every case by some well known writer who has actually visited the country which he describes. Four of the contributors are distinguished correspondents who have had many romantic experiences. Their articles in this number have to do with the changing conditions brought about by recent upheavals.

Richard Harding Davis leads the number with an account of a journey "Along the East Coast of Africa," stopping at those strange, half-barbaric and half-civilized ports that mark the fringe of progress in Africa. From Lorengo Marquez to Tanga Mr. Davis found it one of the most entertaining journeys that he has ever taken, each town representing a new phase in the great international problem of the conquest of Africa. The article is full of delightful character sketches of the restless men who are taking part in the beginnings of empires and states.

---

I am with the White Plymouth Rock Club in their effort to have two pounds over standard weight disqualify, in the American class at least, but if it is to be applied to ducks also let us first raise the standard weight of Pekins a like amount or at least one pound all around. Otherwise most of us will have to put our show ducks in training. *Harvey H. Huggett, Fall River, Wis.*

**Now Is the Time You Want Eggs!**

By feeding your fowls a little

**Banner Egg Food and Tonic**

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

Remember this TONIC does not force your hens to lay, it only brings them up to the pink of condition, which is necessary for egg production.

To those who have never used it, we simply ask you to give it a trial, and be convinced.

Prices: 1 lb. can 25c, by mail 40c; 5 cans $1 on board express in New York.

# THE BELGIAN HARE.

## THE BELGIAN AT HOME.

From *Chasse et Peche*. Translated by Dr. H. P. Clarke.

(NOTE—Below is given what appears to be the only authentic history of the origin and development of the Belgian hare which has ever been printed in English. Among the many publications on this subject which have lately appeared in Great Britain and the United States there is an absolute uniformity of opinion to the effect that no true *leporide* ever existed. But, as our author so naively remarks, "The affirmation of one single practical breeder who himself has raised hundreds of leporides, is of greater value than the denial of all the savants in the world."

This series of articles is from the pen of Mr. Louis Vender Snickt, editor of the *Chasse et Peche*, the leading fanciers' paper of Western Europe. It has been my good fortune to have made the personal acquaintance of Mr. Vander Snickt, having first met the gentleman at an agricultural fair in the North of France in the spring of 1894, and I can testify to the fact that he is not only a scientific zoologist, but also an ardent fancier and practical breeder as well. H. P. C.

We are going to give the history of an animal which, basing exclusively upon a book published in England in 1896, "The Book of the Belgian Hare," by Ernest Wilkins-Wantage, according to the scientists, does not exist.

"The Belgian hare," says the author, "is a native of Belgium. Its appearance dates from an epoch not far from the commencement of this century. Forty years ago there was formed in this country a race of domestic rabbits which, seen at a distance, resembled common hares. Some enterprising breeders have pretended to have been successful in crossing hares and rabbits, of which the products were called 'leporines' (the English are in the habit of writing 'leporines' for *leporides*). When these were brought to the zoological garden of London, says Dr. Salter (at this epoch I was a member of the council of the society) the fiction was soon discovered."

It happens then that these gentlemen, notwithstanding the fact that they have the honor of belonging to the council of administration of the zoologocial garden of London, authorize themselves to declare that the *leporide* exist only in the imagination of those who produce, breed and sell it in England at 7 francs 50 per head. These excellent gentlemen may be very great savants, having read and written much upon the crosses possible and unattainable, but they have never, as we have done, bred simultaneously the hares, the rabbits and the *leporides*. Now the most learned savant, the oldest keeper of a museum of skins or of skeletons, will never be able to teach a simple peasant to distinguish a hare from a rabbit, and a rabbit from a leporide.. We may say, and the proofs in support of this assertion are not lacking, that there is the blood of the wild hare in the leporide, and the affirmation of one single practical breeder, who himself has raised hundreds of leporides, is of greater value than the denial of all the savants in the world. Furthermore, if matters not to us for the moment whether the animal now called Belgian hare be a leporide or simply a rabbit. We have in Belgium our plan for the utilization of the leporide.

The English have just started the fashion among the fanciers of America! We endeavor to imitate if only for the purpose of having something to respond to the avalanches of letters which reach us from America by each mail.

Since the so-called "leporines" were introduced in this country they have continued to be reproduced here, but they are employed for two very distinct objects: some are bred for their size, while others serve to develop a rabbit of the form, the color and the coat of the wild hare. The largest race has been named Patagonian, but now it is recognized as a type different from the one called Flemish Giant. The other has been named Belgian hare.

This phrase deserves to be framed. When we were appointed director of the zoological garden of Ghent in 1872 or 1873, we moved there from Grammont our collection of animals, among which was a couple of Flemish Giant rabbits bought from the Baker Braemt in the city of Ghent, where they have been bred for centuries. The male cost $9 and weighed eighteen pounds and nine ounces; the female cost $5 and was at least equally large.

Mr. Jacques Vekemans, director of the zoological garden of Antwerp, having seen these animals at the garden in

Ohio Belle, score 94½. Winner of the Ohio state championship for the best doe bred and owned in Ohio. Bred and owned by Ira C. Keller, Prospect, Ohio. Mr. Keller won all the firsts (five) at the above show; also two state championships in strong competition.

**Belgian Hares**
Some fine does for sale at $5 each. Young stock, 4 mos. old, $3.50 each. These are first class and pedigreed animals. References—First National Bank, Kansas City, Mo.; C. M. Condon Col., Bank, Coffeyville, Kas.

# BELGIAN HARES.

A practical breeder knows "that good points do not come by accident." There necessarily must be good blood to sustain points. High grade **IMPORTED DOES** bred to such bucks as **FASHODA'S IMAGE**, sired by Ch. Fashoda (World's prince of Belgians); **BANBURY DUDE**, sired by Lord Banbury, by Ch. Banbury, by Ch. Moulton Mystery; **YUKON LAD**, sired by Lord Dearborn, by Ch. Yukon, by Ch. Unicorn; **LORD CURZON** sired by Gold IV, by Old Gold, Ch. Moulton Mystery; **EDINBORO BOY**, sired by Golden Edinboro. by Ch. Edinboro, by Real Gold, means points and pedigree combined. The above bucks at stud—service limited, No job lots; no bargain sales; no scrubs; no 95 to 98 point Hares for $1.50. I am not selling score cards: but HONEST ANIMALS at the RIGHT PRICE.

**W. T. GALLAWAY, 496 LaSalle ave., Chicago, Ill.**

Ghent, bought them from us for $20. They were sold at the animal autumn sale for $27, or rather for $28.75, with a commission to the notary. Immediately following this sale we shipped several pair of these rabbits at $20 per pair, to almost all the zoological gardens of Europe. Finding ourselves unable to supply the demand, we then shipped to Paris, to the Jardin d'Acclimation, and to London to Mr. Philip Castang, Leadenhall market, quantities of giant rabbits, guaranteed of pure blood, but only five or six months old. It is the culls from these rabbits, the specimens deformed by having been handled by men not knowing the breed and who permitted the rabbits' ears to lop over, that some rather unscrupulous exhibitors tried to pass off as "Patagonians."

At this same epoch we had at Ghent some leporides which, according to those from whom they were obtained, Messrs. Roux and Gayot, must have been five-eighths hare and three-eighths rabbit. The Belgian government had them brought from France and placed them in depositories. One lot went to the agricultural school at Gembloux and another to the zoological garden of Ghent. Those at Gembloux rapidly degenerated and none survived. But at Ghent, under the clever direction of Mr. Louis Tydgat, they multiplied and became disseminated among the fanciers, the agriculturalists and their friends, who greatly esteemed these animals because of the most excellent flavor of their flesh and their resemblance to the hare. They did not burrow like the rabbit, but had a habit of constructing a sort of nest in the form of a cradle, made of hay and straw, and in which they sank down in such a manner as to hide the posterior half of the body. They degenerated rapidly, the fur becoming yellowish or marked with white at the extremities. This new animal made a great sensation among the hunters, who thought they had found the ideal game of their dreams, but it was impossible to perpetuate these leporides for the restocking of the hunting grounds. Furthermore, the breeding specimens were without defense or protection. But a fact worth noting and which seemed improbable had not numerous proprietors of hunting grounds been there to testify to it, was that the products obtained in the well guarded preserves were only ordinary wild rabbits after the first generation.

*(Continued Next Month.)*

—o—

The American Belgian Hare Association held its annual election of officers and directors, Feb. 4, 1901, at the Sherman House. The meeting was large, enthusiastic and harmonious.

The officers and directors were nominated, voted upon and elected strictly upon their individual merits and ability to serve the association. It made no difference who proposed the nomination. In fact, in one case, that of Treasurer Fred L. Kimmey, the election was by acclamation, no one being nominated to oppose him.

The following officers were elected: Fred E. R. Jones, president; W. M. Caldwell, vice president; A. C. Biederman, secretary; Fred L. Kimmey, treasurer.

They are all men of business ability and financial standing, either carrying on business for themselves or holding positions of responsibility and trust with well known firms, and the association will be run on strictly business principles. Mr. Fred L. Kimmey, as secretary of the National Fanciers' Association for years, has had large experience in the management of poultry and pet stock shows and will be a valuable aid to them the coming year.

The association has passed through its first year; held one show which was something of a venture; has paid all bills and has a surplus in the treasury with which to begin the second year. The membership fee is $1 and the annual dues $1, payable the first day of January each year.

—o—

The best strains of fowls are bred by constant selection, not only to feather, but taking into consideration hardihood, laying qualities and all that is desirable in fowl kind. We must breed for vigor as well as for feathers if we would be successful. Bear this in mind and put it in practice.

## Prize-Winning Belgians.

That I have a **prize-winning** strain of hares is proven by my show record at Hillsdale (Mich.) County Fair, where I won **first** on both buck and doe. Am breeding best known strains such as Lord Britlan, Banbury, Yukon and others. Stock reasonable. Correspondence solicited.

## Money in Belgian Hares.

You can make more money raising Belgian Hares than in any other branch of the live stock business. If your poultry is not paying a satisfactory profit, raise Belgian Hares and you will be satisfied. If you have a little time to spare from your poultry, try Belgian Hares and increase your profits. They are easy to raise and cost little to feed.

Money making stock for sale at the following prices: Standard pedigreed breeders, $4 to $15 each; youngsters from $2.50 each up. Meat stock breeders, $2.50 to $5 each; youngsters from $1.25 each up. Correspondence solicited.

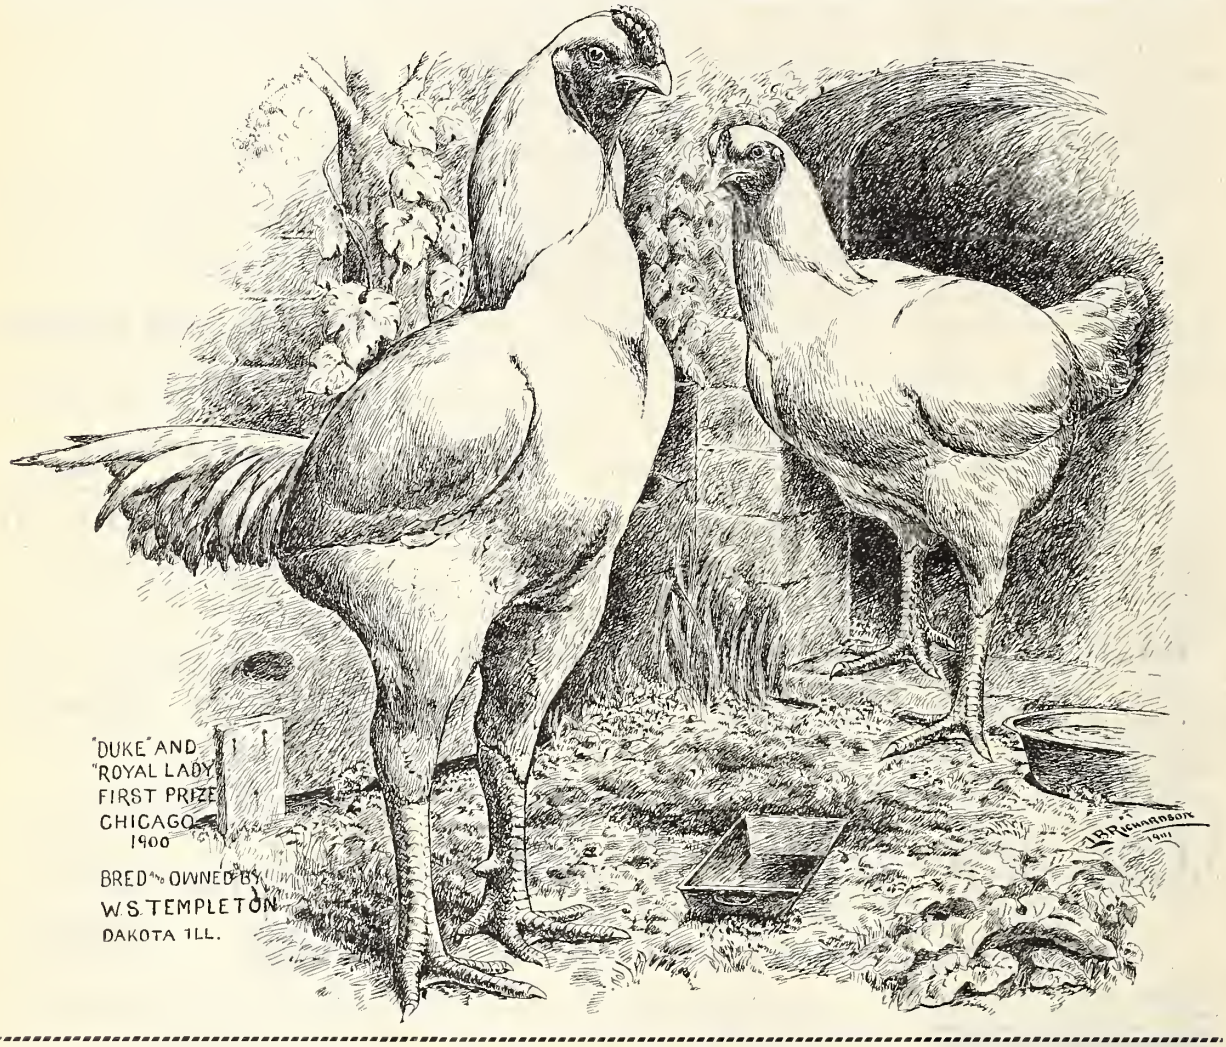
## WHITE INDIANS.

Though very little was heard of White Indians before 1890 their improvement since that time has been with exceptional strides, and if one may judge by the number of inquiries for exhibition and good breeding stock their demand for public favor is no less remarkable for the call for good stock far exceeds the supply. Writing of the last Madison Square Garden show in the *American Fancier*, Mr. McGrew commented on the best class of this variety he had ever seen at New York and vouches that they are "decidedly in it" and truly they are, for with their great breast development, white plumage, yellow skin and legs, and tender meat with that delicacy of flavor possessed by no other fowl than the Indian, they are preeminently the epicurean's favorite table fowl. But their good qualities do not stop here for they are hardy, easily raised, rapid growers, lay quite as well as average Plymouth Rocks and make faithful sitters and mothers. With proper care and when not allowed to get too fat, as is often the case, they are good winter layers. Like all other fowls they do not excel in all good qualities. The intelligent fancier has ceased to look for an early maturing, twelve pound, 250-egg-a-year breed of fowls. They do excel as a table fowl and fanciers must cater to the demands of the market if White Indians are to retain a permanent hold upon the fancy. Today the most popular fancy fowls are the varieties that have the practical qualities to back them and may it always be so.

The fancy market demands a full breasted, plump bodied, short legged carcass, preferably with a yellow skin. Such a fowl the White Indian is bound to be. In the way of improvement we are striving to produce a bird very short in feather, very broad in back but short from hackle to tail and slightly convex in top line, the outline of the shoulders and back resembling the shape of a heart, deep, full and prominent in breast, long keel, closely tucked up in stern, the keel, breast and top line of back giving the whole body the shape of an egg with the large end front, when viewed from the side. To this we shall add a short neck, erect carriage and short legs with powerful thighs, set wide apart, giving plenty of room for the breast to swing between, and we have as near an ideal table fowl as will ever be produced. To these excellent and most important qualities the fancier adds whiteness of plumage, symmetry of carriage, a good comb, head, beak, eye, etc., and we have a "gentleman's fowl."

But it is their "farmer" qualities that appeal to the American public. They stand confinement quite as well as the other active breeds but from experience I know they are at their best with free range, just as farmers are wont to have their fowls. They are good foragers, easy keepers, fattening easily, strange to say, for most foragers run the fat off. There is more danger of getting them too fat than otherwise.

The accompanying sketch is a most excellent likeness of "Duke," the 1st prize cock at Chicago, January, 1900, and "Royal Lady." "Duke" was a massive specimen weighing 10 lbs in normal condition. The artist's work shows remarkable fidelity to the subject, not only in form but in facial expression of "Duke" himself. The egg-shaped body—prominent breast, deep keel, well tucked stern and convex back are all faithfully portrayed. His shape captivated Judge J. Y. Bicknell, who pronounced him the best shaped Indian he had seen up to that date. He was not only a great individual bird but proved to be a remarkable breeder, his sons and daughters being true to type to a marked degree. I am interested in watching the development of one of his cockerels, his equal in body points, with shorter legs and more upright and commanding in carriage.



I am strongly in favor of line breeding and add my testimony cheerfully: At the same show with "Duke" the 1st prize hen was a half sister of "Duke's" sire, the 2d and 5th hens, full sisters of "Duke" and the 3d hen, a half-sister. The 1st and 2d cockerels were his sons and the 1st, 2d and 3d pullets were descendants of the dam of "Duke."

W. S. TEMPLETON,
Dakota, Ill.

# U. R. Fishel, Hope, Ind.

## The White Plymouth Rock Specialist.

The questions often arise in the minds of and are frequently asked by the beginner and amateur in the poultry business, How did the prominent breeders, the big men in the business, get their start? How was tbeir attention turned to poultry? What is the secret of their success? It is an interesting retrospect to go over this ground and an object lesson in the building of a business step by step until one reaches again the success tbat has come to the successful breeder.

One of the most prominent breeders of White Rocks in the country today is U. R. Fishel, of Hope, Ind., and his story is so interesting and helpful to the beginner and so full of successful results that all will be interested and helped in the reading of it. In the case of Mr. Fishel, as with hundreds of the prominent breeders of America, it is interesting to note and equally gratifying to the publishers of AMERICAN POULTRY JOURNAL to learn that his first inspirations toward the fancy were received from this journal, and tbat it is today receiving his patronage as one of its heaviest advertisers, with, as he assures us, good results.

In 1876 there lived in a small town of 800 inbabitants in the great state of Indiana an elderly gentleman keeping hotel. He had a large family and among the children was a boy, then about ten years of age. This little fellow was always employed with pets of some kind, either an old hen, Bantams or pigeons. He used to breed the little old-fashioned speckled Bantams and would sell them to the traveling men who stopped at the hotel for $1 a trio, which was at that time a "long price" for chickens.

Somehow in '78 this boy got hold of a number of the AMERICAN POULTRY JOURNAL, then edited by C. J. Ward; the result was after reading the JOURNAL the boy developed a severe case of the "chicken fever." I think this boy read tbat paper over several times. The outcome was fancy poultry he must have. But how to get it! He had read about all the different breeds, studied all the advertisements, and had decided that Brown Leghorns (single comb, as rose combs were not thought of then) were the one and only chicken on earth. The next thing was to secure some birds of that breed. He at last secured a job of sawing wood, for which he received a dollar. Every stick of wood he sawed he thought of Brown Leghorns. With the dollar he bought a sitting of eggs from one of the advertisers of the AMERICAN POULTRY JOURNAL and when the eggs came they were placed under the most trusty hen his mother had.

The days were counted and watched to see the little chicks come forth. On the nineteenth day he went to look at the old hen to see if she had any idea of hatching, when lo! and bebold, there she sat witb a fringe of little beads around her. . From tbe fifteen eggs there had hatched thirteen chicks. The boy nearly broke his neck getting to the house to tell his great find. With care and good attention and with the help of tbe AMERICAN POULTRY JOURNAL he reared every one of those chicks. That fall he took them to the county fair and had them looking as though they had just come out of a band box. The judges could not see as the boy did, for they only gave him second prize. The boy knew he should have had first prize, so never forgot the actions of the judges. He visited other county fairs after that and won first with his Leghorns. He made money from the start out of fancy poultry and was soon unable to fill the orders for birds and eggs.

He then got one of his brothers interested, who also took the hen fever—a very bad case. The result was a large plant and several breeds, but later they settled down to one, the lordly Langshan.

Gradually this boy was learning how to breed, care for and rear good poultry. Tbeir success with the Langshans was phenomenal, winning the leading prizes at the shows and selling the greater part of good Langshans of that date. They sold Judge Theodore Hewes a sitting of eggs for $8 when Theodore had just caught the hen fever. Years rolled on and the poultry business seemed to improve so practical poultrymen were in demand. Our boy secured a position at $600 a year to oversee a plant in Alabama. He being only eighteen years of age and the first time from home, could

ECONOMY INCUBATOR AND BROODER CO., Box 5, Augusta, Mich.

not stand it to stay away. After a year's absence he returned to the little village in Indiana, to the hotel where he could have a few chickens of his own.

He got it into his head that poultry was only for boys—though he was a man now—so he went into business. After being in business a few years he happened to be driving along a country road and saw a flock of white chickens. No sooner had the eye caught sight of them than the fever came back. It was not long until his garden spot at home was converted into a poultry yard and White Plymouth Rocks were where the garden used to be. When the boy (now a man) was asked if he was going into the business again, he said, "No; I just got them as a recreation from my business." It was not long, however, until he was shipping some birds to a show. Soon new houses and more runs were built; soon more ground was bought and added for chickens. The next thing a large two-story poultry house, and last a 120-acre farm.

This boy with one dollar invested in fancy poultry laid the foundation for a business education (as he is now one of the leading hardware and implement dealers of the state) far better than any college could do. His first love, poultry, is still his hobby, and several thousands of White Rocks are shipped annually from his yards. This shows what boys can do. Therefore, he says, the dear old AMERICAN POULTRY JOURNAL should urge the boys to take hold of the poultry business and stay with it, for it is a good educator.

Here is an object lesson in success. It is the story of a tenacity of purpose in the boy and an intelligent following out of good plans in the man. The story is but a modest recital of a really remarkable career, for in it is contained the history of success in breeding, in the show room, where he encountered the strongest opposition by other equally persistent and successful breeders. The cup here illustrated shows his success at the recent Chicago show, it being the Rigg challenge cup, won by Mr. Fishel's birds. The list of his Chicago winnings is a long one, that proved the superiority of his stock.

The Rigg Challenge Cup, won by U. R. Fishel, Hope, Ind., with his White Plymouth Rocks at Chicago, 1901.

The group of birds, drawn from life by Artist Sewell, is made up of Mr. Fishel's principal Chicago 1901 winners, including 1st cock, 1st cockerel, 1st pullet, 2d hen. He is a White Plymouth Rock specialist, devoting himself entirely to this variety. The egg buying season is now on and he predicts this will be a record-breaking season, from the number of orders already booked and the general conditions of the business. Buyers can be assured, however, of getting orders filled promptly, for he has hens in abundance that are attending strictly to business. Mr. Fishel's new 120 acre farm will soon be ready to stock up and we predict a

still greater business for him than ever before.

## Market Report.

It is now time for poultry breeders to dispose of their surplus stock, especially roosters, which they do not want to keep for breeding purposes. Also any surplus hens. Now is the time to get them to market, while prices are up. Neither should they lose sight of spring chickens, as from now on they will be in demand at good prices. It is useless to sell to home dealers and allow them to make the profit. Breeders should ship direct and get all there is in their stock.

The receipts of poultry have been very light for the last few weeks, market firm and high than it has been for several years.

We are selling today as follows:

Live poultry—Chickens, hens and last year roosters, without spurs, 10c; old roosters, 6c; broilers, 2 to 2½ lbs each, 15c; 1½ lbs each, $3 to $4 per dozen. It is hard to tell what broilers will do, but we look for good prices in the near future. Ducks are scarce, 10c; turkeys, 8 to 9c; pigeons, $1.75 per dozen.

Dressed Poultry—Turkeys—Hens, 12c; gobblers, 8 to 9c; chickens, 9½ to 10c; broilers, 1½ to 2 lbs each, about 15c per pound; capons, 10 to 14c per pound, according to stock; ducks, 11 to 12c. Eggs, 12c per dozen. We do not look for any change in the egg market for the next few weeks.

As long as the weather is cold it is advisable to dress poultry, but as soon as it turns warm everything should be shipped alive. We still have some of our booklets giving directions for making coops, handling and shipping poultry so it will bring the highest market price, which we will be glad to send to any one asking for them. We will also send market reports and shipping tags free.

We carry a full line of poultry supplies, such as crushed oyster shell, mica crystal grit, bone, blood, meat meal, lice and insect killer, etc., which we are selling at a very low price. We want agents

outh Rocks, 2d cock, 1st and 4th hen, 3d and 4th cockerel, 1st, 2d and 4th pullet, and 1st pen. He also won more specials than all other competitors combined. There were about 100 birds in the class.

# PERSONALS.

I. T. Bryant, Oxford, Ohio, writes that he is better fixed this year to furnish eggs from Buff Rocks than ever before and will try and fill all orders as fast as they come in. He has more Buff Leghorns that he wishes to sell at a bargain.

C. H. Latham, of Lancaster, Mass., will sell a limited number of Barred Plymouth Rock eggs from the same matings that he is breeding from himself. There is no question regarding the value of Mr. Latham's stock and eggs, as his winnings have so often demonstrated, and A. P. J. readers can send their orders for eggs with the greatest assurance of getting value received. By referring to his ad prices can be learned.

We are in receipt of an interesting paper read by Mr. J. E. Lanphere, of Ponemah, Ill., at the farmers' institute at Rosenville Feb. 13. Mr. Lanphere is thoroughly competent to give instruction on poultry culture, as he has made a great success of his business in that line. He has just issued a new catalogue describing his Plymouth Rock and Cochins, and all who are interested in these breeds should write Mr. Lanphere for a copy.

Wing of a line-bred Light Brahma cockerel owned and bred by U. Grant Davidson, Manson, Iowa, originator of the "Great American Strain."

Nichols Brothers, of Yorkville, Ill., write that they have sold all their surplus stock, but are ready to supply customers with eggs from some of the best White Wyandottes raised. In their yards is the third prize hen at Chicago and many others as good.

The Cleveland Poultry Company, of Plattsburg, N. Y., come out in this issue with a new ad. of French lice powder and disinfectant, which is claimed to be superior to any domestic article known. It don't cost much to try it, for 30 cents brings 12 ounces, charges prepaid, to you.

Fred A. Ullrich, Mossville, Ill., commenced a yearly advertisement this month. Mr. Ullrich breeds Plymouth Rocks and S. C. W. Leghorns, and we refer our readers to him for stock of these varieties.

For years Middletown, Ohio, has been famous for the great number of fanciers found there and the exhibitions given in

the past were always up to the top notch. One of the best shows in southern Ohio was that given under the auspices of this club, Dec. 24-28, 1900. The next exhibition will be held Dec. 17-21, 1901, and will be judged by Thomas H. Mills, of Michigan. Following are the officers for 1901: W. S. Paulin, Franklin, Ohio, president; Waldorf H. Dunn, Monroe, Ohio, vice president; N. O. Selby, Middletown, Ohio, secretary; Henry Hensey, Middletown, Ohio, treasurer; Joseph Winglewitch, Middletown, Ohio, superintendent.

—o—

John Watt and Mrs. S. E. Campbell are breeders of Buff and Barred Plymouth Rocks at Lacon, Ill. D. T. Heimlich recommends this stock very highly,

Hen "Daisy," record 231 eggs in 12 months. Bred and owned by Fred Grundy, Morrisonville, Ill. Her barring is first class. Her shape can be seen. The photo was taken while she was watching a bird sailing aloft. All of her eggs were laid in one of the Automatic Easy Nests, invented by her owner.

as he scored 85 and more fowls which averaged 90 points and better. This stock is strictly line-bred and pedigreed and it has taken more than its share of first prizes at Wenona and Henry, Ill.

C. F. Avey, of Columbia City, Ind., won at the Butler, Ind., show on Partridge Wyandottes, first cockerel, 92½; first pullet, 91¾; second pullet, 91¾; first hen, 93¾; second hen, 91½; and first pen.

C. H. Eldridge, Galena, Ohio, wishes to inform our readers that he is so situated that he can give them extra value for their money. He has improved his breeding stock greatly and sends his customers eggs from his best birds. His past show record is evidence of the high quality of his stock.

The American Poultry Remedy Company, of New York city, has a change of adv. in this number. Their guaranteed roup, cold and canker cure is having a large sale strictly on its merits. We have heard many favorable reports regarding it.

At Kentucky State show, January, 1901, on sixty-eight entries Mrs. B. F. Jackson of Eminence, Ky., won fifty-six regular and forty-five specials.

Pekin Ducks scored to 98 points, winning every first but one and tied for that. Bronze Turkey yearling cock, 1st, 96½.

Light Brahmas, cocks, 1st, 2d and 3d; pens, 1st and 3d; hens, 1st, 2d, 3d and 4th; pullets, 1st, 2d and 4th; Buff Cochins, cockerel, 1st; pullet, 2d and 4th; hen, 3d; pen, 1st. Buff Leghorn, cockerel, 2d; hens, 1st, 2d and 3d; pullet, 2d. Black Langshan cock, 1st; hen, 2d; pullet, tie for 1st; pen, 3d. Cornish Indians, cock, 2d, 94½; hen, 1st 95 and

One of Dr. A. P. Bennett's (Mazon, Ill.) prize cups won on his Buff Plymouth Rocks.

2d, 93½; pullet, 2d, 94; cockerel, 1st, 96; pen, 1st, 89. Her Pekin duck pen was the highest scoring pen in the show, 195 43-100.

Mrs. Jackson won more prizes than any other exhibitor in the show.

---

AKRON, OHIO, June, 1900.

*Conkey & Co, Cleveland, O.*

Dear Sirs: I wish to say that your

One of the winning White Plymouth Rocks owned and bred by J. S. Hoffman, Sharon, Pa.

Roup Cure is all you claim for it. I had a few cases last fall and never lost

# BUY THE BEST EGGS.

# Keyworth's Golden Buff Rocks.

I am devoting most of my time to breeding **BUFF ROCKS, my specialty.** I have spared no expense in perfecting my strain and have bred them in line in a practical and scientific way for years. They are **GOLDEN BUFF** and as near **SOLID BUFF** as has ever been produced. They are noted for their size, shape and color.

## THEY WIN.

At the Indianapolis Show said by all present to be as good a class as was ever gotten together. I won 2d cock, 1st and 2d hen, 2d cockerel, 3d pullet, 3d pen and special for best cock, hen, cockerel and pullet, and at the Illinois State Fair they beat all comers to a standstill. They also won last year at Chicago.

Absolutely no more eggs this year. Will move back to Sandy Hill, N. Y., on May 1st.

**J. D. KEYWORTH, 1332 Forrest Ave., Evanston, Ill.**

## White Wyandottes, Exclusively.

Males direct from Duston's yards, mated to pure white, large, fine shaped hens. I do not breed from pullets. 210-egg strain. 15 eggs $3; 30 $5. M. B. Turkey eggs, 9 for $2. Incubator eggs $5 per 100.

***R. L. SEYMOUR, Warrenton Grove, Ill.***

a bird after using it. They often contract bad colds or Roup at the winter shows and if exhibitors would use Conkey's Roup Cure at the time, they need have no loss or trouble. I am never without it. Yours truly,

S. F. GULLIFORD.

---

LEADVILLE, COLO.

*Messrs. Conkey & Co., Cleveland, O.*

Dear Sirs: Please send me another package of Roup Cure. It seems to do the work. Yours truly,

A. C. HARRIS. P. O. Box 394.

---

F. O. Welcome, Yarmouth, Me., is advertising his Ideal Trap Nest in A. P. J. and will send a copy of his circular to all interested. There is no question about the advantages of a trap nest. All breeders should have some way of determining "which hen laid the egg" and Mr. Welcome's nest will solve the problem satisfactorily.

---

Mrs. J. H. Orebaugh, Batavia, O., has issued a neat and attractive circular giving prices of eggs and stock and describing her matings of Barred, White and Buff Rocks and White Wyandottes. Mrs. Orebaugh has made some excellent winnings which entitle her to a place in the front rank.

---

Buckeye Poultry Yards, Portland, Ore.

PORTLAND, ORE., Nov. 9, 1900.

S. F. Flint & Son, Peoria, Ill.,

DEAR SIRS: White Wyandottes received, and we are pleased with them. Bid fair to be good birds.

MRS. CHAS. E. YOUNG.

(Later.)

PORTLAND, ORE., Jan. 23, 1901.

S. F. Flint & Son, Peoria, Ill.,

DEAR SIRS: I write you a line to say I exhibited the White Wyandottes I bought of you with some I had raised the last year, and won first on pen, cockerel and four pullets at our Oregon State Poultry Show. I thought you might like to hear of my success. It was my first exhibit. I also won on other fowls.

Yours truly,

MRS. CHAS. E. YOUNG.

P. S. What do you sell eggs by the hundred for, and how soon could you ship them?

The above are samples of the replies received by the gentlemen addressed from their customers. They call attention to the long distance these fowls were shipped and that they were received in good condition. Messrs. Flint are now engaged in filling orders from White Wyandottes, Buff Wyandottes and Barred Rocks at low prices for such high-scoring stock as they have in their breeding pens. Note their ad in this issue and send for their circular of winnings and prices.

---

WESTERNPORT, MARYLAND.

*A. P. Winslow.*

Dear Sir: I think it is my duty to write you and thank you for your square dealing with us. Out of 30 eggs sent I got 25 chicks and 3 dead in the shell, so that was 28 good eggs. I have not had the hen fever long but if I get another case like the one you gave me I don't know where it will stop.

Yours truly,

(Signed.) P. T. M.

---

A. D. Coleman, of Belding, Mich., probably has some of the finest stock in

Michigan, and is the originator of the famous Cyclone strain of single-comb brown leghorns, begins a yearly ad. in this issue. He has some fine stock and is offering a limited number of eggs this season. He is selling eggs from pullets scoring as high as 95 3-4 points, and expects great results from his matings. Under date of Dec. 16, 1900, he received the following:

A. D. COLEMAN: From the eggs bought of you last spring I raised two cockerels, scoring 95½ and 95, and two pullets, scoring the same. Yours truly,

FRANK E. DAVIDSON.

Owasso, Mich.

Mr. Coleman is offering still better eggs this season. He is very careful in the breeding of his birds, as he breeds from

This Black Langshan pullet was winner of eight first prizes in eight Indiana and Ohio shows, including the great Indiana state show. Bred, owned and exhibited by Ed. Isley, Hope, Ind.

none that show serious defects. We shall publish the cut of his famous Julius Caeser I in the May issue.

---

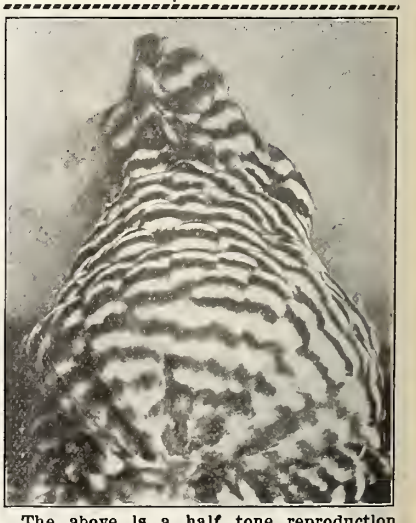
A. V. Dykes, Dana, Ill., writes us his Barred Rock pens are all mated with scored cockerels and cocks ranging from 90 to 93¼, the lower scoring birds being pullet breeders. Eggs last month proved 90 per cent fertile. In S. C. Brown Leghorns all the cockerel score 93 to 94. He can supply most any number of customers with fresh, fertile eggs at half what they are worth, and thinks that $1 per fifteen is certainly a bargain for those looking for S. C. Brown Leghorn eggs.

---

LISBEN, ME., Jan. 25, 1901.

*Mr. A. P. Winslow.*

Dear Sir: I received the cockerel all right, I find him to be good color, good



The above is a half tone reproduction of the back of "Island Belle," one of E. L. Miles' Barred Rock pullets. Mr. Miles states that Judge McGrew pronounced this bird to be the best all round pullet he ever saw.

head, comb and legs, and also an active bird. Am much pleased with him and thank you for your good selection.

(Signed.) A. E. J.

# PERSONALS.

## VALLEY FARM.

The formal opening of Valley Farm occurred Feb. 22 at Simsbury, Conn. It was an innovation in the annals of the poultry fancy, and the editor of this paper, who fortunately was present, gladly admits that it struck a chord that every lover of fancy fowls or other live stock must admire. The proprietor, Mr. Joseph B. Thomas, Jr., and his capable manager, Mr. J. F. Crangle, prepared a treat for the visiting fanciers that was indeed a splendid exemplification of thorough American sportsmanship. The report of our reporter will be found below. We will briefly preface his remarks by a brief description of the new plant. Valley Farm is located in the famous Farmington valley of Connecticut. Some hundred acres are devoted to the cultivation of the live stock. A fine club house has been built, where Mr. Thomas entertains his friends and guests. Adjoining this is the well equipped and furnished residence of Mr. Crangle.

A few rods further is a new building devoted to office purposes, and back of it is a large room equipped with Empire coops, where the crack show birds are prepared for the shows. A poultry building some 200 feet long is located but a few feet away. Here can be found the famous Houdans, Barred and White Plymouth Rocks that have made Mr. Thomas and Mr. Crangle famous. Everything is practical, no attention being given to veneer. It has the thoroughbred look.

All the birds looked in the best of fettle, and when the fall comes there will be a host of youngsters at Valley Farm that will make a great hustle for the blue ribbons at the leading shows. The splendid pine woods offer a great range for the growing stock.

Besides this there are the Belgian hare hutches, stocked with the best blood procurable, the kennels containing some of the champion Russian wolfhounds of the country.

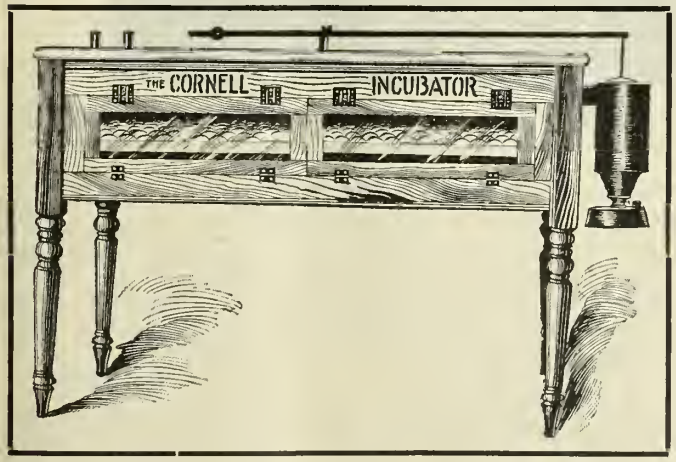
We know from personal acquaintance and experience that Mr. Thomas desires above all things the best, and is equally anxious to maintain the highest standard in his relations with his fellow men in the show room and elsewhere.

As to the hospitality and entertainment furnished to the guests, it was characteristic of the high motives that inspired it. Of the latter our special reporter says:

There was a celebration of a novel character here today on the occasion of the opening of the Valley Farm of Joseph B. Thomas, Jr. Its like has never been seen here before and it was notable

Wing and tail lacing of first pullet at Illinois State Show, 1901, pronounced by Judge A. B. Shaner the finest marked Light Brahma pullet he had ever seen. He gave her a score of 95½, the highest he ever scored a Light Brahma pullet. Bred, owned and shown by Harvey C. Wood, Mt. Pulaski, Ill.

# CORNELL INCUBATORS AND BROODERS



Are the latest and most modern inventions for artificially hatching and rearing chickens.

The great superiority of the Cornell Incubators and Brooders are due to the regulation of ventilation and heating.

No foul air or poisonous gases can accumulate in the egg chamber to poison or destroy the germ, as in the case of nearly all other makes.

Our new improved Brooders are also automatically heated and ventilated. You can keep the heat at a constant temperature, with no cold corners nor hot spots in which the chicks will crowd.

Send as soon as possible for our descriptive catalogue; you will get it free by return mail. Let your order follow quickly; it will be promptly filled. If the machines do not please you send them back. We will refund the money.

for a number of different reasons. There were a fox hunt, equestrian feats of various kinds and a flag raising, and the whole wound up with a banquet and concert of the most successful kind.

The preparations had been going on for some time, and all was in readiness when the guests, about 150 in number, arrived this noon. They went direct to the farm, where E. B. Thompson, of Amenia, N. Y., made an address of welcome, to which Mr. Thomas fittingly replied. A lunch was served for all, after which there was an adjournment to the fair grounds, where the various equestrian sports were held. There was hurdling, which on account of the slippery condition of the ground was mainly in the way of exhibition of polo ponies, and there were three half-mile races. Mr. Thomas won two and J. F. Crangle, the manager of the farm, the other. The liveliest of the day's events was a hunt after a wild fox all through the grounds. The animal had been captured earlier in the week, and when released led the hunters and dogs a lively race. Mr. Thomas' Russian wolf hound finally caught the animal, and Harry Case, of Tariffville, was the first hunter in at the death. Three rabbits were released and hunted down also. There was a flag-raising, a band discoursed music and a general good time was enjoyed.

There were many guests from out of town. In the evening there was a banquet, at which Mr. E. B. Thompson presided.—*American Fancier.*

WORTH $25.

B. H. Greider, the well-known poultry breeder of Florin, Pa., whose card will be found elsewhere in this issue, recently received a letter from a customer, who enclosed stamps for several copies of Mr. Greider's catalogue for his friends, saying that the copy he had received was worth fully $25 to him. It is a most valuable book, handsomely illustrated, and containing full descriptions of all the leading varieties of poultry. Mr. Greider's farm at Florin is one of the best stocked poultry establishments in the country. He has been a careful student of advanced methods, and by careful breeding has produced as fine a lot of fowls as will be found anywhere. Moreover, having a large farm, his fowls are not cooped up in little pens, but have the good range necessary to health and vigor, and the production of fertile eggs which hatch chicks that live and grow. It is for this reason that Mr. Greider's customers always are so well satisfied with their purchases from him. Send 8 cents for his valuable book. It is full of money-making hints. Circulars free.

20,000 WHITE LEGHORN EGGS.

The Crescent Farm, Kent, Ohio, has received and accepted an order for 20,000 S. C. White Leghorn eggs. This is what we would call a large order, and it gives some idea of the capacity of Crescent Farm. Our readers will remember that this is the plant owned by Mr. Henry M. Ladd, of Cleveland. His birds have been winners for years in the strongest competition, and his strain is one of the most widely distributed.

White Rock pullet. Weight 8 lbs. The type of White Rock bred by W. C. Pierce & Co., Indianapolis, Ind. They have raised a large number of birds as good or better than this one that have won in the largest shows, scoring as high as 96½ under the most prominent judges.

NOTICE OF TRANSFER.

This is to certify that I have sold to Chas. L. Rowan, Ogle, Penn., "Hero" 1st, S. C. B. Leghorn cockerel, at Chicago, '98. He has proved to be a grand breeder, and is still very vigorous.

C. A. DAWSON.

TWO RECORD-BREAKING SALES.

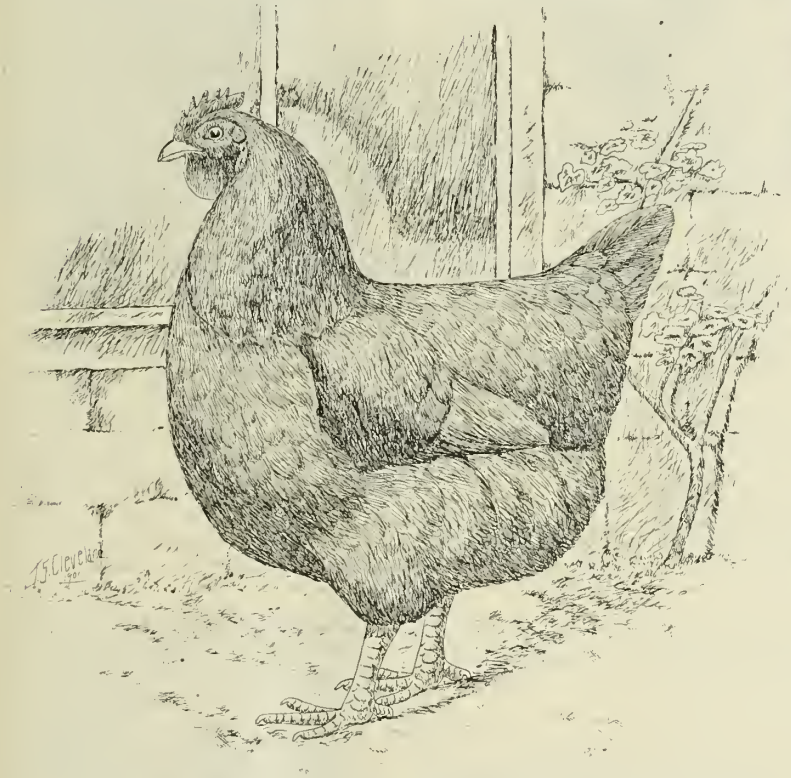
Mr. A. C. Hawkins, of Lancaster, Mass., the well-known breeders of Plymouth Rocks and Wyandottes, has been making some good sales of late. He sold sixty birds to two parties, for which he received $1,500, an average of $25 each. In the collection was one Barred Rock

cockerel at $100, two at $50 each and four white Wyandotte males at $50 each. It is great satisfaction to a breeder to have such quality for sale, but Mr. Hawkins seems to always have it and plenty of it. No breeder in the United States knows the value of a good bird better than does Mr. Hawkins.

—o—

## JUDGE D. H. KOHLI VISITS OLD HONESTY POULTRY YARDS, ROCKFORD, OHIO.

Mr. D. J. Kohli writes us as follows regarding a visit to A. J. Bargahiser, proprietor of the Old Honesty poultry yards, Rockford, Ohio: "We had the pleasure of inspecting over 200 head of up-to-date, well bred birds, including Barred and White Rocks, White Wyandottes and Houdans. In Barred Rocks we seldom find such quality as we found here. In the male line both cocks and cockerels we found those uniform, blocky fellows which we so often read about but seldom see in our travels; and as regards barring, both in surface and under color, they are surely at the top, as we saw cocks scoring from 90 to 92 points and cockerels from 90 to 93½. In hens and pullets he had birds equal to the males, some scoring 93½ and 94 points. In White Rocks we saw some beauties, both in males and females. Talk about color! Here we surely found what the standard calls for. In White Wyandottes I think Mr. Bargahiser must have made this breed a specialty, as we seldom find such blocky Wyandotte types as a whole. We saw one cock bird five years old and still holding his own in shape and color and scoring 94½ honest points. Among his cockerels we found the same type as the old bird and scored them from 91½ to 95¼. His hens and pullets are unusually fine specimens, scoring from 93 to 96. Those who want to get the best in White Wyandottes should not fail to get eggs from these birds. Mr. Bargahiser is also strong in that popular French breed, the Houdans, and we can recommend his stock in the highest terms. His birds of this variety score from 93 to 96 points."



Buff Orpington pullet owned by W. F. Worth, Wheatland, Wis., winner of first at Milwaukee, Antioch and Burlington, Wis.

—o—

## HOW TO BUILD A WARM DRY POULTRY HOUSE.

We wish to call the attention of our readers to the announcement of A. F. Swan Co., 116 Nasau street, New York city. They manufacture "Swan's Extra Heavy Felt" for sides and roof of poultry houses, dwellings, barns, silos, creameries and other buildings; also for sheep, wagon or wood sheds, flat or steep roofs. This felt is wind, water and fire proof, and obnoxious to vermin of all kinds. The cost is low enough to bring it within reach of all. Since its introduction, ten years ago, thousands of rolls have been sold to poultrymen and we have yet to hear the first word of complaint. If you have any idea of building this spring or fall, we would suggest that you send to the company for one of their descriptive circulars, with sample of the felt and testimonials.

## A GREAT RECORD WON ON BARRED ROCKS FROM RINGLET EGGS.

Morrowville, Kan., Feb. 6, 1901.

Mr. E. B. Thompson, Amenia, N. Y.

Dear Sir: My winnings on Barred Rocks at the Washington, Kan., Show, Jan. 17 to 19, 1901, were as follows:

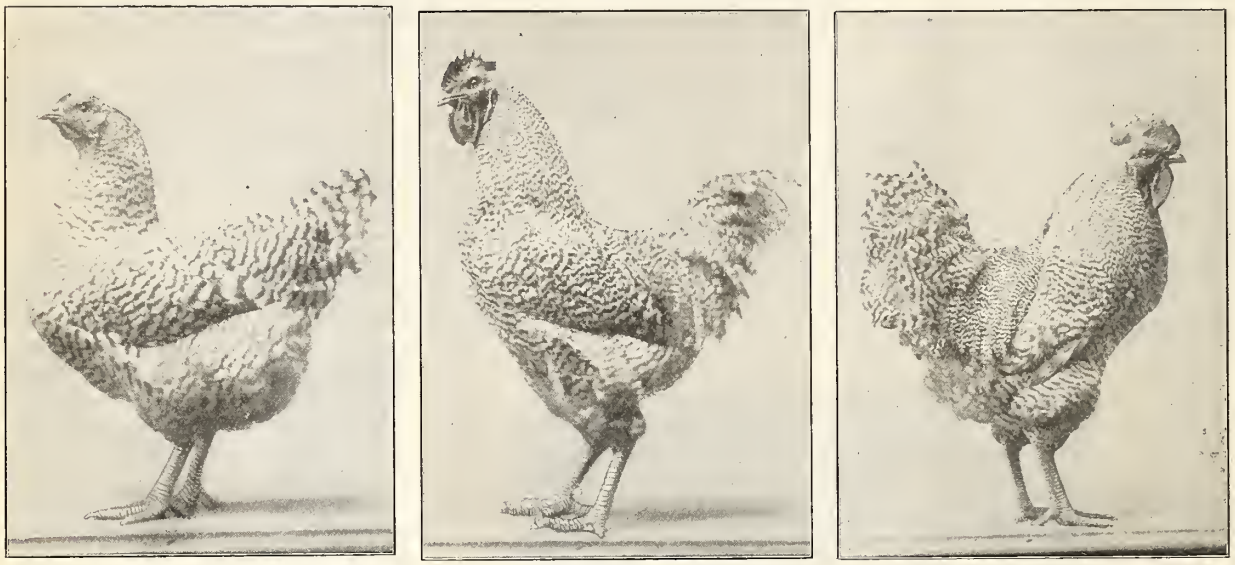
# BLANCHARD'S WHITE LEGHORNS.

## The Leading Strain of Heavy Layers

Are no experiment, having been carefully selected and bred for over 20 years with results that fully justify the claim that they are **THE GREATEST LAYING STRAIN OF SINGLE-COMB WHITE LEGHORNS IN EXISTENCE.** No labor or expense has been spared in building up this strain, and while the production of large, pure white, fancy market eggs has been the main object, **STANDARD QUALITIES** have not been neglected. They are large, vigorous, active and handsome, unexcelled for introducing new blood or as foundation stock. 1,000 birds for sale. Cockerels for sale. **Eggs for hatching from finest stock** in large or small lots.

**H. J. BLANCHARD, Box 997, Groton, N. Y.**



BARRED PLYMOUTH ROCKS.

Bred by M. J. Temkovits, Brooklyn, Ohio. First cock at Cleveland, Ohio, 1901. Won first as cockerel at Cleveland, Ohio, Dec., 1899, also first at Akron, Ohio, Jan., 1900, and tie for second at Ohio State Show, Columbus, Ohio, 1900. Second cockerel at Cleveland, Ohio, 1901. First pullet at Cleveland, Ohio, 1901.

First, second and third cockerels; first, second third pullets; first and second hens; first, second and third breeding pens; sweepstakes on parti-colored birds; silver cup for best display. These birds were all hatched from eggs bought of you.

I will want some more eggs in the spring.

The judge asked me what strain of birds I had. I told him E. B. Thompson's "Ringlets" strain. He said: "Stay with Thompson." Yours respectfully,

FRANK MCCORMICK.

—o—

BEAVER, Pa., Feb. 27, 1901.

Editor American Poultry Journal, Chicago, Ill.

Dear Sir: Believing that the poultry fraternity in general and the breeders of White Wyandottes in particular will be interested, we wish to report a sale made from Beaver Hill Farm this day that more closely approaches four figures than any we have heard of recently. This sale includes 120 birds, covers our entire flock of breeding and exhibition birds, and they go just as they were mated up for the breeding season.

The fortunate purchaser is F. C. Wilcox, Joliet, Ill., a breeder of White Wyandottes, who has been wonderfully successful, not only as a breeder, but as an exhibitor. At leading Western shows his scores and winnings were evidence that he has stock of the finest quality. We recently sold Mr. Wilcox a cockerel for $25 which pleased him greatly. He asked for more of the same quality. We invited him to visit Beaver Hill Farm and look at our breeding stock. He did so and the result was that he made us a flattering offer for our entire flock of White Wyandottes.

This put us in a quandary. We had spent good money and had laid awake nights to get the flock up to its present standard. We had exhibited these birds at leading shows with success from Indianapolis to Hagerstown. We had learned to love the Whites. The breeding season was just opening and egg orders had begun to come in.

But—there is always a but—we had a still larger flock of our old-time favorites, the Silver Wyandottes. We had mated up a nice lot of the new favorites, the Partridge Wyandottes. We needed more room at once for these two breeds. We had always been an advocate of specialty breeding. Here came a fancier who is already a successful specialist in White Wyandottes. He knew a good thing when he saw it and was able and willing to pay a good price for our Whites. He will reflect credit on our breeding and mating. He will fill all our customers' orders to their entire satisfaction. The 120 birds he takes from Beaven Hill Farm and the ones he already has will make him a flock of 300 of the finest White Wyandottes in America.

Is this the time to let them go? It cost us much regret to part with our Whites, but we decided it was the best thing to do under the circumstances, and thus get one step nearer the single-breed standard ourselves. We bespeak for Mr. Wilcox the generous patronage that was already coming to us on White

# Arnold's Buff Leghorns

This season at twelve of the largest shows in America won leading prizes

## And are Champions of the World!

At Madison Square Garden, N. Y., 1900, they won 2 Silver Cups; 5 Gold Specials; 4 out of 5 firsts, including 1st and 2nd pens. Twice as many firsts and three times as many regulars as any one won at the late New York show. No stock for sale. Eggs from the finest yards we ever owned. $5.00 for 15; $9.00 for 30; $12.00 for 45; ten chicks guaranteed.

# Arnold's Buff Rocks

We have only a few yards but as fine matings as any breeder in America has. A Western judge who saw our birds says: we had the finest he saw in the East. Birds from our yards at the late shows win leading prizes at two of the largest shows in America. Eggs $3.00 for 15 straight.

## White and Black Belgian Hares.

***12 Prizes on 12 Entries at Madison Square Garden, N. Y.*** Dr. B. C. Plat, of Los Angeles, Cal., who is President of the National Association of Belgian Hare Judges, and the leading judge and authority on Belgian Hares, in America saw our Whites, at New York, and spoke in the highest favor of their quality and future. Young stock in Whites at $20.00, $30.00, $50.00, $75.00 to $100.00 per pair. Blacks $15.00 to $25.00 per pair. These two varieties will be the greatest money makers of the age.

**AUG. D. ARNOLD, Box 77. Dillsburg, Pa.**

Wyandottes. We know that he will meet every reasonable demand made upon him, and with the prize winners he got from us and his own Hickory Grove place will rank higher than in the past.

T. E. ORR,
Proprietor Beaver Hill Farm, Beaver, Pa.

Moral—This large sale is the result that followed a small one in which we gave more than we promised. We scored that $25 cockerel 94½. Other judges have since scored him considerably higher.

---

Valley Farm, Simsbury, Conn., owned by Jos. B. Thomas, Jr., has a change of

Golden Wyandotte pullet, winner of first at Kansas City, 1901. Bred and owned by W. A. Doolittle, Sabetha, Kan.

advertisement this month. Mr. J. F. Crangle, manager of the plant, informs us that they are in better position than ever before to supply customers with eggs which will produce satisfactory results. The breeding stock has all been mated

Buff Wyandotte cockerel, winner of first at Kansas City, 1901. Bred and owned by W. A. Doolittle, Sabetha, Kan.

under Mr. Crangle's personal supervision, and his experience and ability are so well known that we need not comment upon the matter. There is nothing more disappointing than to purchase eggs and find that half of them are un-

Partridge Wyandotte cockerel, winner of the Partridge Wyandotte Club special for best shaped male at Chicago, 1901. Bred and owned by W. A. Doolittle, Sabetha, Kan.

fertile. The eggs from Valley Farm will be found reliable in every way. The varieties bred are Barred and White Rocks, Houdans and Bronze turkeys.

---

Mr. A. P. Winslow, Freeport, Maine, has strengthened his line of breeding birds by purchasing a male bird bred in line from Philadelphia winners. This bird shows barring clear and deep in all sections and he is mated to females barred to the skin, having clear beaks, bay eyes and fine legs. He has also added to his flock a cockerel from one of the leading winning male lines at New York for several years, and has mated him to females equally as good. His birds are particularly strong in size, shape and heavy laying qualities, and his eggs are proving remarkably fertile. Mr. Winslow states that he has made a sale to every inquirer he has had this season for cockerels, and he has not had a dissatisfied customer. A selected lot of feathers which he has sent us indicates that his stock is of the very best.

---

Mr. James Cheston, Jr., Chestnut Hill, Philadelphia, Pa., made one of the most remarkable records on his White Wyandottes during the past season that we

This doll is an exact reproduction of the finest hand painted French Doll, and will live in a child's memory long after childhood days have passed. Address,

**NATIONAL MEDICINE CO.,**
**Doll Dept. 489, New Haven, Conn.**

have noticed. He exhibited at Philadelphia, Boston and New York and won fourteen regular prizes, six of them being firsts. He also won forty specials at these shows. This places him in position where he can justly claim to have one of the leading flocks of White Wyandottes. He is selling eggs for hatching from his best birds, and those who entrust him with their orders will undoubtedly get something fine.

We are pleased to acknowledge receipt of the catalogue of the Wabash Brooder, manufactured and for sale by G. C. Flegel, Westville, Ind. With the immense number of brooders now on the market it becomes somewhat of a question to decide which one to buy. We know that the "Wabash" is a good one and Mr. Flegel invites comparison with any brooder on the market, irrespective of price, and positively guarantees his to be exactly as represented in regard to workmanship, durability, economy and efficiency. Also that if the proper method of feeding is followed and overcrowding is not resorted to it will raise 85 per cent of the strong, healthy chicks intrusted to its care. The merits of this brooder are certainly worth an investigation by all who intend to purchase a brooder.

WHITE PLYMOUTH ROCKS.
Prize winners at the late show at Cincinnati, O., Jan., 1901. Bred and owned by Mrs. J. H. Orebaugh, Batavia, O.

SOUTH FARMINGTON, MASS., Nov. 1, 1900.
MR. W. F. CHAMBERLAIN, Kirkwood, Mo.

Dear Sir: The coming season will be the third during which I have used your "PERFECT [well named] CHICK FEED," and it affords me real pleasure to give added testimony to its merits, because of the percentage of chicks raised, the health of the young stock and their rapid growth as compared with others on which I have experimented with other foods; your feed is very cheap. I still find that 100 pounds will raise 100 chickens to about six weeks of age, an average cost of but 2½ cents per chick for six weeks, and that is less than I can feed that number of youngsters in any other way. They get "PERFECT CHICK FEED" and nothing else. Please ship five bags at once and oblige, yours with best wishes,

A. J. SILBERSTEIN.

H. A. Emmel, box 43, Ogle, Pa., made some enviable winnings at the late Pittsburg show. In an unusually strong class of Light Brahmas he won 2nd cock, 4th cockerel and 1st pen on six entries. In the S.-c. Brown Leghorn class he won 2nd on pen which contained birds of exceptional quality in all desirable points.

D. E. and A. J. Blick of Galesburg, Ill., are closing out their White Plymouth Rocks at a great bargain and will breed Buff Rocks exclusively in the future. Their advertisement will be found elsewhere in this number of the AMERICAN POULTRY JOURNAL.

Mr. E. L. Famulener, proprietor of the Famulener Poultry yards, has issued a new illustrated circular which will be sent free to all applicants. It is nicely illustrated and describes his matings of White and Buff Rocks, White and Buff Cochins and Bantams. He states that eggs from his yards are hatching remarkably well and he is prepared to fill all orders promptly. He still has a few good cockerels all up to standard weight, good shape and plumage which he will sell at bargains. He guarantees absolute satisfaction in all his dealings.

G. M. Whitford, of Arlington, Neb., will furnish Black Langshan and Barred Plymouth Rock eggs and stock at prices that are right. In his advertising this month he states he will duplicate all settings that hatch less than seven chicks and his price for eggs is reasonable.

Good, strong, healthy chicks, like good, strong, healthy children, depend upon the constitution and vitality of the mother. Many an egg hatches all right, but the chick fails to grow and mature from a lack of vitality. You can put vitality into the eggs, and hence into the chicks, by feeding vitality to the hen. This is a matter of great importance in fowls

Oak Park Poultry Co., "Exhibition House." 115 S. Humphrey Ave., Oak Park, Ill.

set aside for breeding. They need, most of all, animal food which imparts strong constitution and vigor. Darling's Pure Poultry Foods, Sweet Beef Scrap, etc., fill the bill exactly. See ad elsewhere in this issue.

W. B. Gibson & Sons, West Alexander, Pa., won at the Pitsburg show February 18 to 23, 1st, 3rd and 4th cockerel, 2nd and 3rd cocks, 1st, 4th and 5th hens, 1st pullet and 1st and 3rd pens, also five cash specials, including cash special for best collection on display. Judge Bridge authorized them to say that their first prize cockerel was the finest male bird in under color that he had ever seen. These birds were all bred and raised by Messrs. Gibson & Sons from their own stock.

The following is a list of winnings of R. D. Burnham, of Champaign, Ill., at St. Louis last fall. He was unbeaten at the county fairs: first on B. P. Rock pen; first on White Cochin pen; first and second on White Cochin chicks; first White Cochin Bantam pen; second on White Cochin Bantam; second Emden geese; second Bronze turkeys. Buff Cochin pen out of condition, but scored by Russell cockerel, 93½; hens, 94½, 93½, 93 and 92. The balance of the hens in the yard are equally as high scoring. These scores were made at end of August, 1900, and are not as high as they would have been had birds been in best of condition.

Mr. Charles Bloomer is selling eggs from his Single Comb White Leghorns at $2 per setting of fifteen, and those who want something really high grade in this line can get it from Mr. Bloomer at a very low price. He will be remembered as one of the prominent Chicago winners this season, and he makes no claims for his stock that are not substantiated by the records. He guarantees satisfaction and fills orders promptly. His address is 871 North Mozart street, Chicago, Ill.

Ed. Isley, Hope, Ind., was a winner this season at the Kentucky State Poultry Association show at Louisville, Ky. He breeds Barred Plymouth Rocks and Bronze Turkeys and guarantees to please his customers.

Ed B. Murphy, box 3, Carmel, Ind., writes his matings for 1901 were never so good as they are this year, and he is able to take care of all orders sent him for eggs. He will *guarantee* them to be *fresh* and *fertile* and also a good hatch. His yards contain many prize-winners, and he sends eggs from same yards he uses for himself. He will send his fine *Color Plate* Catalogue, telling all about them and a whole lot of things you ought to know, for only 10 cents.

## OAK PARK POULTRY CO.

Oak Park, Ill., can justly claim one of the most complete fancier's plants that can be found in many a day's travel. The Oak Park Poultry Company, 115 South Humphrey avenue, E. W. Biederstadt, manager, is located at Oak Park, Ill., Chicago's most attractive suburban town. The illustration given here shows their exhibition house, and is a complete, perfect house, that would delight the most fastidious fancier. Here can be seen their specialties in white birds, the White Indian Games, White Wyandottes, and S. C. White Leghorns, all prize winning, pure bred stock. While at present they have no stock for sale, they are booking orders for eggs. This place is a favorite resort of Chicago fanciers, and many visitors have attested to the quality of the stock and the perfection of the plant.

Mr. Biederstadt is a prominent Chicago business man, who takes his chief delight in his birds, that have proved winners at the Chicago show, and is also an en-

KLONDIKE INCUBATOR

You cannot fail to appreciate the value of Klondike Incubators and Brooders if you examine the principles of their construction and operation. Their simplicity makes them easy to run. Lack of delicate parts makes them durable. Results make them successful. Low prices make them popular. What more do you want? For free illustrated catalogue which gives full descriptions, prices and much information for poultrymen, address KLONDIKE INCUBATOR CO., Box 908, Des Moines, Iowa.

BARRED PLY ROCKS OF MONTAUK FAME

Bred in line. I can help you to WIN, or to exceptionally fine breeding birds. Twelve years experience in mating and breeding this variety. A RARE CHANCE to get Finest Stock Cheap for Quality.

A limited number of Eggs only will be sold at $3.00 per 13; $5.00 per 26.

R. W. DURYEA, Great River, Long Island, N. Y.

thusiastic dog fancier, being the owner of the famous Bull Terrier bitch, "Champion Dutchess Wight," and is always in attendance at Chicago's bench shows with his dogs.

"Marvel," the White Indian Game cock, illustrated here, took first prize at the

"Marvel," White Indian Game cock. First prize Chicago show. Oak Park Poultry Co.

recent exhibit of National Fanciers' Association of Chicago, and is one of the prominent attractions of these yards. Quality is the paramount issue in the Oak Park Poultry Yards and buyers of eggs will surely get good treatment and value received.

—o—

C. E. Vass, Washington, N. J., breeder of Buff Orpingtons, Buff Rocks and White Wyandottes, has a few trios of fine breeding birds for sale. His stock is of the highest quality and sure to please. He is now filling orders for eggs from his prize winners.

Ben S. Myers, of Crawfordsville, Ind., was a big winner on his Black Langshans at Indianapolis and Chicago this season. At Chicago his first prize cockerel was said to be the finest ever exhibited at that show. He has some grand cockerels yet for sale. Mr. Myers is being favorably received as a judge and has quite a number of shows booked for next season. He has a few open dates which no doubt will be arranged for soon.

H. E. Bates, of Galesburg, Ill., writes that he has sold all his surplus stock, but that he can fill all orders for eggs. He breeds prize winning White Rocks and Buff Wyandottes, and sells eggs from his choicest matings. A hatch which he had February 9 produced 12 chicks from 13 eggs, which is remarkable for the season of the year. He has a change of adv in this number and is selling eggs at the low price of $2 per setting.

Mr. J. L. Jefferson's first prize White Plymouth Rock hen at Chicago, 1901, half-tone of which appeared in March number, was described as a White Wyandotte. Mr. Jefferson breeds White Wyandottes of highest quality but the winning bird in question was a White Rock. His address is Box A, Des Plaines, Ill.

Mr. C. L. Hogue, of Battle Creek, Mich., reports a large trade in Barred Rocks this season and he has only a few cockerels and pullets left. Egg orders are coming in better than last year also, and prospects are bright with him for a record breaking season in this respect. Mr. Hogue offers his services as judge during the coming show season and gives assurance of satisfaction. He has had 20 years' experience with fancy poultry and claims to be Michigan's pioneer in this respect.

R. D. Burnham, of Champaign, Ill., writes that he has had his birds mated on his new farm since last December and now has some chicks out. The first hatch netted 11 chicks from 12 eggs. He has more than doubled his facilities and from the way the season opens he anticipates a great business.

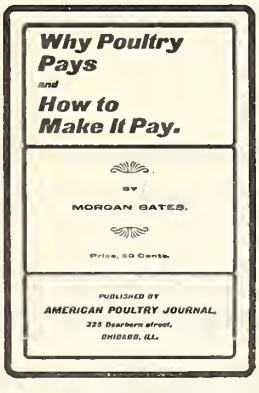
Ira A. Gregory, of Lexington, Ill., says that his stock is in excellent condition and that eggs from his best birds are testing over 90 per cent fertile. At the Illinois State show he won 1st on cock, which was pronounced one of the best shaped males in the class and he was even in color all over. He also won special for largest number of birds scoring 90 points and over.

Mr. Geo. H. Burgott of Lawtons Station, N. Y., generously withdrew his entries of Brown Leghorns from competition at the New York show in order that

"Hoosier States Winner." Black Langshan cock, score 95. Bred and owned by Thaddeus E. Allee, Greencastle, Ind.

he could judge the class. Owing to the illness of Mr. Howell, who was to place the awards, the management pressed Mr. Burgott into service. He claims that he would have had his share of the firsts had he competed and that he had an easy winner in cock and cockerel.

F. C. Bailey, Reading, Mich., has a change of ad in this number, and offers to send his circular free to all who write for it. Mr. Bailey is the well-known Buff Rock breeder, and has as fine a lot of breeding birds this season as he ever owned. His show record is one of which he may well feel proud, and is an assurance to his egg customers that they are getting full value for their money.



# The Short Route to Success

Our new book "Why Poultry Pays and How to Make It Pay," will tell you what you want to know and what you must know if you succeed with poultry. The book was written by Morgan Bates, who was for 14 years editor of **American Poultry Journal.** It is the newest book of the kind and has been pronounced by expert poultrymen to be the

**MOST COMPLETE AND THOROUGH TREATISE ON THE POULTRY BUSINESS**

which has thus far appeared. Chapters are devoted to various subjects, and just the points you desire to know are easily found. It tells how to start and how to keep going right after you have started. It instructs its readers in the methods of feeding and the best foods for layers, breeders and exhibition birds. It has chapters on "Diseases of Poultry," "Poultry Houses and Fixtures," "Success With Incubators," "Success With Brooders," and, in fact, covers every phase of the question. It is a complete and practical guide and directory to the best methods which have brought success to thousands of poultrymen. **It is a school for the amateur and a help to the expert.**

**GRAND SPECIAL OFFER** The regular price of this book is 50 cents. We will send it to you and give you a 15 months' subscription to American Poultry Journal for 75 cents, or the book will be given free for four subscriptions at the regular price of 50 cents.

Address **AMERICAN POULTRY JOURNAL, 325 Dearborn Street, CHICAGO, ILL.**

# News and Announcements of Poultry Associations and Specialty Clubs.

## THE AMERICAN BUFF LEGHORN CLUB.

The annual meeting of this club was held at the Coliseum, Chicago, Ill., Jan. 24, and elected the following officers: President, Charles L. Taylor, Chicago; eastern vice president, Harry M. Lamon, Watertown, N. Y.; western vice president, N. L. Pressnall, Munden, Kan.; secretary and treasurer, George S. Barnes, Battle Creek, Mich. Executive committee: B. F. Hislop, Milford, Ill.; Oscar Smith, Rochester, N. Y.; August D. Arnold, Dillsburg, Pa. Honorary vice presidents; James Dundas, Deer Park, Ont., Canada; Herman Fisher, Jr., St. Clair, Mich.; F. E. Olson, Galva, Ill.; E. G. Marquardt, Burlington, Iowa; C. A. Durling, Hopewell, N. J.; Frank E. Kimball, Denver, Col.

The dues for 1901 are now due and the secretary will be pleased to receive the same, also to list any and all breeders who have the welfare of this breed at heart. Write him at once. The club will offer an elegant silver cup at the Pan-American Exposition for the best cockerel, pullet and breeding pen; also a beautiful silver cup in each state that has ten members in good standing. The secretary wants to hear from you and would be pleased to have the honor of sending the by-laws and constitution of the club and placing your name on the list of membership. Write him today without any delay.

GEO. S. BARNES, Secretary,
Battle Creek, Mich.

## THE LOS ANGELES SHOW.

The tenth annual exhibition of the Los Angeles County Poultry Association was held in the New Electric building, Jan. 15 to 19, 1901, one of the most central locations procurable for that purpose, and fully justified the extensive preparations that were made by the show committee. This show differed materially from similar exhibitions held at this time of the year in the eastern and middle states, inasmuch as everything suggested warmth and comfort; flowers and vines were conspicuous in the decorations, while the exhibitors and spectators were clad in the lightest material and overcoats and wraps were entirely superfluous, but these ideal conditions without the stock do not make a poultry and pet stock show, and poultry, Belgian hares and thoroughbred cats were what people paid the price of admission to see, and in that they were not disappointed, for a finer display, quality and quantity considered, has never before been brought together in this city, and from the comments of many eastern visitors the exhibits would have given a good account of themselves in any part of the United States of America. The show occupied two floors, the first floor being occupied with the display of incubators and brooders, most of them in working order and hatching and caring for hundreds of chicks, and poultry supplies of all descriptions were on display in tastefully decorated booths. The two front windows facing on Fourth street were always filled with live stock of more than passing interest and proved a drawing card. Adjoining the poultry supply exhibits came a unique display of bantams, embracing almost all varieties; they occupied an elaborate three-story collection of cages, made of polished wood and belonging to one person. Next were the cats, which monopolized the balance of the floor space with the exception of some caged birds, but these were mostly suspended from the ceiling or hung from the walls, which made a pretty effect with the festooning of bunting and smilax, and made music with their song. Then downstairs were the poultry and Belgian hares. Every available foot of space was utilized—five isles with either chickens or rabbits on either side and not an empty coop. The fowls were exhibited in uniform coops, brand new and of the latest design—truly a sight to make a fancier's heart grow glad, such a revelation in quality, and showed conclusively the advantages of scientific breeding under a cloudless sky and an equable climate. Then the Belgians.

# EGGS FOR HATCHING.

***Do You Want the BEST?***

I know you do, for you want to rear White Plymouth Rocks that are better than your neighbors, Remember when you place your order with me you get eggs from

## 15 GRAND YARDS 15

At the head of each yard is a noted prize winner. Not a bird in the yards under weight, and all line bred, so are sure to reproduce themselves. Parties that bought eggs from my yards last season had no trouble winning the past winter. You know

## FISHEL'S WHITE PLYMOUTH ROCKS

Win every place shown, and in some cases never leave a prize for the **"OTHER FELLOW."** The cause of this: They **ARE BRED RIGHT** are **CORRECT TYPE, GOOD SIZE** and as **WHITE AS CHALK** and **STAY WHITE;** also have rich yellow legs. No little, narrow bodied, high tailed birds among them. This is why they are conceded to be

## "The Best in the World."

**SOME** breeders think it terrible, me claiming to have the "Best in the World," but you notice that I have always proven the claim to be true, for you always find **MY BIRDS** at the **LARGEST** and **HOTTEST SHOWS.** My recent great record at

## The Great Chicago Show, 1901,

where they won 1st, 2d, 3d cock, 1st, 2d, 3d, cockerel. 1st, 2d, 3d pullet, 2d, 4th, 5th hen, 1st, 2d, 3d pen; the A. P. A. cup for best two cocks, two cockerels, two hens, two pullets; all American classes; **THE RIGG CHALLENGE TROPHY** for best display American class. **GOLD SPECIAL** for best display all breeds; best display Plymouth Rocks; best display White P. Rocks; best cock, best cockerel, best pullet; White Rock Club Special. In fact, every special but one. This is a record that stands without an equal, and is without a doubt the greatest winning ever made by a specialty breeder at a large show. At St. Louis they made a clean sweep, winning every prize. At great New York State Fair, 1900, 8 out of a possible 10 prizes. They win everywhere shown. There is not a show of any note but what "FISHEL" White Rocks carry off some of the ribbons. I have 300 select breeders yet to sell, at prices that will sell them. Remember, my 24-page circular (new one, just out) is free.

**Eggs, $5 per 15.**

## U. R. FISHEL, Box A, Hope, Ind.

# HAWKINS' STAY WHITE WYANDOTTES

Win more prizes and sell for more money than any other strain. They have won all down the line this season, and judges all over the land pronounce them the ***WHITEST*** and ***BEST.*** They are in a ***class*** by ***themselves*** for ***quality.*** They have no ***close rivals*** at the big shows. You can get the ***BEST*** at honest prices of

**and pay the freight 500 miles from Toledo.**

Our Incubators are equipped with our patent pipe heating hot water system. Best grade copper. Superior method of ventilation. Made of 1st grade kiln-dried poplar. Double walls. Case within case and finished in hard oil and varnished.

**SPECIAL PRICES:** We are making special guaranteed prices on these excellent machines for the **next 30 days.** Send for free catalogue, No. F 1704, and special prices before you buy, or send 10 cents postage and we will include a year's subscription to leading poultry paper.

**HATCH-ALL INCUBATOR COMPANY, TOLEDO, OHIO.**

# GEORGE'S WHITE ROCKS

Make a record never equalled by any other breeder in the **WORLD** at America's largest and hottest show.

## BOSTON,

Jan. 1901, in the **LARGEST** and **HOTTEST** class ever shown, we won more first, second and third prizes than all other exhibitors combined, and this with 26 exhibitors. Also winning 13 of the 15 special prizes, as follows: For best display, for best cock and two hens, for best cockerel and four pullets, for best two cocks, two cockerels, two hens and two pullets; for best cock, for best hen, for second best hen, for best cockerel, for second best cockerel, for best pullet, for second best pullet, for second best breeding yard, for best collection of one cock, two hens, two cockerels and four pullets. Making a grand total of **27 Prizes** on 14 entries. We won **21 Prizes** at Boston, 1900, on 11 entries and **13 Prizes** on 11 entries in 1899. This record was not made at any State Fair, but at **BOSTON** in the largest and hottest class ever shown, and stands alone unapproached by any other White Rock breeder in the **World.**

**EGGS** from these prize birds.
1 sitting $5; 3 sittings $10.
2 sittings $8; 5 sittings $15; 100 $20.

If you want the **BEST** and honest dealings write to

***E. H. & S. H. GEORGE, Box 31, Groveland, Mass.***

# Buff Wyandottes,

## ROYAL STRAIN.

Winners this season at Chicago, Detroit, Battle Creek and Rochester, N. Y. I am now furnishing eggs from this grand flock of winning specimens. Send for catalogue giving full description of the best flock of Buff Wyandottes in the world.

***W. R. WOODEN,***

***Battle Creek, Mich.***

Their hutches were of many different designs and colors, but the occupants were a treat—such grace and color and all of the hare like type. The squatty, rabbity animal was not in this show. The spectators were admitted at 6 p. m. Tuesday, and on Wednesday everything was judged and the ribbons up. Those exhibitors that were accustomed to comparison judging said it was a foregone conclusion with them that with capable judges it would be satisfactory, and only words of praise were heard from those that had their birds judged by that system for the first time; in fact, there was not a discontented exhibitor or a single protest. It was a meeting of fanciers and sportsmen and it was conceded from every quarter that each award went where it belonged. The poultry judges were Messrs. S. Tyler, of Pasadena; Robert A. Condee, of Riverside; Charles A. Paul, of Los Angeles. Belgian hares, Henry Langley, of Birmingham, England, now of Los Angeles. Cats, Henry Langley. Officers of the association were: L. D. Hadley, president; Henry W. Kruckberg, secretary; George M. Pomeroy, treasurer; H. C. Dravis, superintendent.

H. LANGLEY.

## AMERICAN WHITE MINORCA CLUB.

The second annual meeting of the American White Minorca Club was held at Madison Square Garden, Jan. 24, 1901. The report of the treasurer showed the club to be in good financial standing; also added a number of new names to the list of members. The following are the officers for the year 1901: President, Frank Willing Leach, Tuckerton, N. J.; vice president, Charles L. Kelley, Watertown, Conn.; secretary, William Sapper, Erie, Pa.; treasurer, Charles W. Jerome, Fabius, N. Y.; honorary vice presidents for their respective states: Dr. J. W. Lyder, Akron, Ohio; William Nehrboss, Crittenden, N. Y.; L. A. Hockersmith, Benton, Ark.; M. J. Cullen, Carterville, Ill.; H. A. Stearns, Canon City, Col.; J. N. O'Neil, Toronto, Canada. To breeders who are not already members, who care to become such, I extend a cordial invitation to send application at once with $1 for membership fee and $1 for annual dues to William Sapper, secretary, Erie, Pa.

## A SILVER WYANDOTTE CLUB.

At the late Chicago poultry show a few breeders of Silver Wyandottes got together and laid the foundation for an organization to be known as the Silver Wyandotte Club of America. The advantage of such an organization, as shown by the other clubs and what they are doing, was discussed, and it was decided that it was time to bring the old-time favorites—the Silvers—to the front by an organization of their breeders.

The number of breeders present being small, it was decided that we would at that time do nothing more than to effect a permanent organization, fix a membership fee and annual dues, issue this circular to all known reputable breeders of Silver Wyandottes asking them to join, and then vote by mail upon such future action as may seem best to be taken in the interests of our favorites.

An organization was effected by electing T. E. Orr, 203 Shady avenue, Pittsburg, Pa., as president, and E. S. Tarbox, Yorkville, Ill., as secretary and treasurer. These two officers and the fol-

# Rhode Island Reds.

## The General Utility Fowl of the Twentieth Century.

Our WINNINGS the PRESENT year demonstrate without a doubt that we have MORE PRIZE WINNERS than any breeder in the country. Having won in 1900 nine firsts and sweepstakes for best male, Concord State Fair, Concord, N. H. Eight firsts and one second, nine entries at Brockton Show. Two firsts and special for best R. I. Red male bird in Fall River. Six first prizes, six entries, Malden, Mass. Forty-two prizes Philadelphia, including the special offer of $50 in gold and $25 in gold, also including nine firsts and nine seconds out of a possible ten each.

**1901**

Boston Show in the hottest competition. Forty-eight prizes, including four firsts, three seconds and eighteen specials. At New York, seven firsts and five seconds, which is a result unequalled by any breeder of any variety of any fowl. If you desire to obtain stock from the very best that there is, state what you want and write us for quotations.

**HOUSE ROCK POULTRY FARM,**
**Wollaston, Mass.**

lowing Silver Wyandotte breeders have each paid in $1 for membership fee and $1 for dues for 1901, namely: Mrs. Geo. M. Hanley, Hoopeston, Ill.; Henry Steinmesch, St. Louis, Mo.; Frank B. White, Oak Park, Ill.; A. C. Le Duc, Chenoa, Ill.; James Tucker, Concord, Mich; R. E. Jones, Flat Rock, Ind.; Richard Lyon, Morrison, Ill.; Joseph Winglewitch, 85 Tenth street, Middletown, Ohio; F. F. Davison, Shousetown, Pa.; D. O. Barto, Princeton, Ill.

While the club has a majority of Western members at the start, it is only because it was started at a western show. Many breeders east and west have mourned the lack of such a club, and it is the wish of its organizers that all who are willing to do something practical to advance the interests of this breed will join them in the club.

Send your $2 to the secretary and treasurer at once, with your suggestions as to the way in which the club can be most helpful, and they promise you careful consideration and a united helpfulness on the part of all that will be of advantage to each one.

—o—

### AMERICAN BUFF WYANDOTTE CLUB.

The club membership has nearly doubled since the first of January. Work on the catalogue is progressing nicely, and something worthy of the club is being attempted. The catalogue will combine a series of articles from experienced breeders of the variety, covering "Mating and Breeding," "Defects and How to Avoid," "Color," etc., etc., besides a history of the variety.

W. R. Wooden, Secretary,
Battle Creek, Mich.

—o—

The Fanciers' Association of Indiana will hold their next exhibition at Indianapolis, Ind., Dec. 12 to 18 inclusive, beginning in the middle of the week and ending in the middle of the week, which will give the breeders a chance to get their birds all home before Sunday.

They held one of the largest score-card shows in America the past season and will have a much larger show the coming winter. Prepare for Indiana's great event in December, 1901. They will step to the front, charging $1 entry fee and pay prizes in full classes—first, $5; second, $3; third, $1.50; fourth, $1, and fifth, 50 cents. Indiana's great show now stands in the front rank with the best shows held in America each year, such as Boston, New York, Chicago and Philadelphia. They hope the coming year to move up a few notches.

A number of specialty clubs are now trying to arrange to have their national show there on the dates above mentioned. One of the leading features of the show is that it comes early, and sales will be enormous, as the breeders at that time are on the lookout for stock to show at later shows, and they gather in large numbers at Indianapolis, where the cream can be found. The quality at Indianapolis is always the best, and the Indianapolis winners can be seen wearing the blue ribbon at a number of the large shows, such as Chicago, New York, St. Louis, Deroit, Bloomington, Cincinnati, Louisville and a number of others of lesser note.

Besides the cash prizes offered by the association there will be hundreds of dollars paid in specials. The show will be cooped again and everything will be

done that can be for the comfort of the exhibitors. Tomlinson Hall, where the show will be held, is conceded to be one of the best exhibition halls in the United States. They have had as high as 2,800 single specimens in poultry on exhibition, besides pigeons, dogs and cats, and can handle at least 3,500 specimens in the single entries of poultry.

The executive committee will announce their judges in the near future.

---

The first annual exhibition of the Melrose Bantam and Pigeon Association was held at Melrose, Mass., Feb. 21-22. Considering the fact that it was an exclusive bantam and pigeon show it was a great success, both as to entries and financially. There were many birds there that

have won high honors at Boston and New York. The Black Cochin class was the strongest of the bantam classes, of which there were nearly fifty entries. The Buffs were a close second with thirty-five entries. In many of the bantam classes there was hot competition. Mr. Knapp judged the bantams and Mr. Pulley the pigeons. There will probably be six silver cups offered next year, three to bantams and three to pigeons. Show dates for next year will be announced later.

---

At the annual meeting of the Sangamon County Poultry, Pigeon and Pet Stock Association the following officers were elected for the ensuing year: J. E. Palm, president; F. G. Eifert, vice president; William Hanselman, treasurer; H. A. Ragland, financial secretary; J. E. Lauterbach, corresponding secretary. It

They win at great Chicago Show, Jan. 1901, 3d cock, 4th pen, 5th hen—one pen entered. Won at La Porte, Ind., Nov. 26 to Dec. 1st, 1900, 1st cock, cut 2¾ on color; 2d cock, cut 1½ on color; 3d cock, cut 1 on color. These birds were in bad feather, wings but half out at time of showing. 1st, 3d and 4th hens; 1st, 3d and 4th pens; special for highest-scoring cock; special for best colored hen; special for highest-scoring hen; special for best colored pullet. Many females were cut but 2 and 2½ on color, in class of 61 birds. Theo. Hewes, judge. Birds are all line bred and farm raised. My pens contain all these prize winners. Eggs $3 per 15.

Write me. State Vice President American Buff P. Rock Club.

was decided to change the name of the association, and it will hereafter be known as the Springfield Fanciers' Association. The date fixed for the next show is Dec. 9 to 14, 1901, with D. T. Heimlich to judge the poultry. Judges of pigeons, hares, etc., will be chosen later. The last show was a great success, both financially and as to quality of poultry shown, there being over 600 head of poultry, while the Belgian hares and pigeons were out in force. Already preparations are being made for the next exhibit, which promises to be a hummer. Exhibitors should not forget Springfield, Ill., December, 1901.

J. E. LAUTERBACH,
Corresponding Secretary.

---

The annual meeting of the American Indian Game Club was held in Chicago, Ill., Jan. 24, 1901. After accepting the minutes of the last meeting forty new applicants were elected to membership, this giving the club a membership of sixty. The election of officers for the ensuing year resulted in the naming of L. B. Richardson, of Chicago, Ill., for president; C. A. Fields, Cedar Falls, Iowa, first vice president; E. B. Underhill, Poughkeepsie, N. Y., second vice president, and W. E. Stanfield, third vice president; C. S. Whiting, secretary and treasurer. The executive committee consists of the president, the secretary-treasurer; H. M. Carpenter, Sing Sing, N. Y.; John Skinner, Herman, Neb.; Dr. M. D. MacNab, Chicago, Ill. I am pleased to report the club in a very flourishing condition, and I desire to urge all friends and breeders of this grand fowl to join the club; the fee is but $1. The Pan-American Poultry Show, Oct. 21 to 31, will soon be here, and many tempting specials will be offered to members of the club. Come and join us and win them.

C. S. WHITING,
Secretary-Treasurer, Darien, N. Y.

---

At a recent meeting of the North Central Indiana Poultry Association, held at Logansport, Ind., the following officers were elected: H. F. Bergmann, president; Joseph E. Kreider, treasurer; W. A. Graffis, secretary. This is one of the oldest and largest associations in the state, as well as one of the most successful.

The date for their ninth annual silver cup show has been fixed for Jan. 15 to 21, 1902, and its success is already assured. Two judges will be engaged for the poultry, as has been done heretofore. Belgian hares and pet stock will have a special judge.

---

The date of the thirteenth annual show to be given by the Northern Illinois Poultry Association has been set for Jan. 6 to 12, 1902, the show to be held at Belvidere, Ill. There is every assurance that at this show there will be the biggest display of poultry, pigeons and Belgian hares ever brought together in this part of the state, as there will be cash prizes paid on individual birds and on pens, and there will also be a sweepstakes prize of $50 for the largest number of birds of any variety or color scoring over 90 points.

Charles McClave, of New London, Ohio, and George Holden, of Owatonna, Minn., have been secured as judges. The officers of the association will work hard all through the year to make the next show the greatest event in the history

of the association. Any one wishing further information in regard to the coming show should address Bert R. Lucas, corresponding secretary, Belvidere, Ill.

---

The Canon City Poultry, Pigeon and Pet Stock Association was organized at Canon City, Col., Feb. 14, with twenty charter members. The people in that section of the state are taking a great interest in standard-bred fowls, and the indications are that the association will hold a big show next winter. The president, Mr. A. J. Heller, informs us that he has traveled quite extensively over the country during the past ten years and has never found a locality where conditions were more favorable for the profitable rearing of fowls, both from the fancy and market standpoints. The secretary of the association is Mr. Charles W. Whipple, of Canon City.

---

The fourth annual exhibition of the Pittsburg Fanciers' Club was held at Pittsburg, Pa., Feb. 18 to 23, 1901, and compared favorably with the large shows of the season, both in number of entries and quality of stock shown. Competition was strong, and in some classes Chicago and New York winners were exhibited. There were about 3,000 entries in all departments and the poultry classes were well filled. The officers of the association are to be complimented for the liberal treatment of exhibitors and the business-like management of the show. The attendance was the largest in the history of the association. The American Polish Club held its annual meeting during the show.

---

The South Carolina Interstate and West Indian Exposition will be held at Charleston, S. C., Dec. 1, 1901, to June 1, 1902. The management is now arranging plans for the live stock department and propose to make it on broader lines than ever before attempted in the south. The exposition grounds cover 175 acres. Liberal premiums will be offered in the poultry department on all recognized classes. Correspondence is solicited with all interested, and it should be addressed to John H. Averill, director general, Charleston, S. C.

---

The Huron Poultry and Pet Stock Association held a very successful show at Goderich, Ont., Feb. 5 to 8. We are indebted to Mr. Joseph Mitchell for a full and interesting report, which we regret we cannot publish at this time. The next annual exhibition will be held at Exeter, and the class of fanciers in charge of the affairs of the association is an assurance of the success of the show.

---

The next Boston show will be held during the week of Jan. 14-19, 1902. All requests for information should be sent to Mr. Arthur R. Sharp, Taunton, Mass.

---

The next annual show of the Galva, Ill., Poultry Association will be held at Galva Dec. 10 to 14, 1901. F. E. Olson, secretary; A. B. Shaner, judge.

---

The Aurelia Poultry Association has been recently reorganized under the name of the Aurelia-Alta Poultry Association. We will have our second poultry exhibit at Aurelia, Iowa, Jan. 13-16, 1902. F. H. Shellabarger will judge the same. The

**Johnson's Light Brahmas**

Won every prize at the St. Louis Fair, 1899, a record no other Light Brahma breeder has ever made. Winners for sale. 5 elegant yards mated for the egg trade.

**FRANK P. JOHNSON, Box A, Howlands, Ind.**

**JORGENSON'S BARRED PLY. ROCKS.**

My birds are winners in strongest competion. They are large size, elegantly marked and the kind you will be proud to own. In addition to other regular prizes won at Racine Show, I had 1st cockerel and 1st pen. First prize cockerel was pronounced by experts to be a duplicate of the first prize bird at Chicago. I have some **FIRST CLASS BREEDING BIRDS** for sale, and am accepting orders for eggs from my choicest birds at $2.50 per sitting.

**CHAS. P. JORGENSON, 922 Forrest st, Racine, Wis.**

Secy Racine Poultry, Pigeon and Pet Stock Assn.

**Chess has the Winners**

**R. C. B. LEGHORNS**

That won 23 premiums this season at the Indiana and Kentucky State Poultry Shows at New Albany and Louisville. In strong competition took the best at both places and captured first breeding pen. Eggs only $1.50 per 15 from these prize winners. Also breed the finest of Barred Plymouth Rocks. Good stock for sale at all times. Satisfaction or money back.

**H. H. CHESS,**
**Box A, - - - Leesville, Ind.**

**Rose Comb Buff Orpingtons.**

**Eggs from two pens, imported direct, at $5.00 per 15.**

**Barred Plymouth Rocks.**

Eggs from four pens, scored by Bridge, at $1.50 per 13. High scoring and all above Standard weight. Mention A. P. J.

**JACOB HANDTE, Calla, Ohio.**

**White Wyandotte Purchase.**

Having purchased the entire stock of White Wyandottes owned by the Beaver Hill Farm, Beaver, Pa., T. E. Orr, Prop., which being one of the largest and best in America, it gives me, in connection with my own celebrated birds, one of the finest flocks of this grand breed in the Central West. This purchase includes all their prize winners, which were many, and their strain will be kept separate from my own so I will be prepared to furnish eggs from either lot and from the best matings money can produce. Price of eggs from my choicest matings are $3 per sitting; $5.50 for two sittings or $10 for four sittings. Have more cockerels and pullets now than I shall need and will sell part of them. Write for prices.

***HICKORY GROVE PLACE,***

following officers have been elected: President, A. M. Conner, Alta, Iowa; vice president, J. C. Lockin, Aurelia, Iowa; secretary, H. B. Green, Aurelia, Iowa; assistant secretary and treasurer, P. D. Wine, Aurelia, Iowa; superintendent of the show, M. Parrott, Aurelia, Iowa.

H. B. GREEN, Secretary.

---

At the annual election of officers of the Will County Poultry Association, Mr. William Webb, of Joliet, Ill., was re-elected president, H. Humphrey, vice president; T. B. Supplee, Jr., secretary, and F. C. Wilcox, treasurer. The next show will be held at Joliet, Ill., the third week in December, 1901. W. S. Russell, judge.

---

Howard Van Sycle, secretary of the Fanciers' Association of New Jersey, informs us that the next annual show will be held at Newark, Dec. 10 to 14, 1901.

---

The Kentucky Belgian Hare Association will hold its first exhibition at Lexington ,Ky., May 14, 15, 16. An attractive list of prizes has been announced. Only stock owned by Kentucky breeders will be admitted in this, the first show.

---

The second annual exhibition of the Van Wert (Ohio) Poultry and Pet Stock Association will be held at Van Wert, Dec. 31, 1901, to Jan. 4, 1902. Ira C. Keller has been secured as judge. Mr. C. E. Detter, the efficient secretary, informs us that greater interest is being taken in the association than ever before and the next show will be a greater success than the last.

---

Mr. L. M. Olds, secretary of the Ypsilanti (Mich.) Poultry Association, writes that the association is planning to hold one of the largest shows in the state next season. The dates selected are Dec. 31 to Jan. 3, 1902. James A. Tucker, judge.

---

At the annual meeting of stockholders of the St. Louis Fanciers' Association, held March 7, 1901, the following directors were elected for the ensuing year: E. O. Hunter, J. C. Crothers, J. H. Ahrens, Frank Grieseduck, Henry Steinmesch, R. C. H. Hallock, J. C. Salzgeber, F. L. Wetzel, J. A. Francisco. The directors elected the following officers: F. L. Wetzel, president; R. C. H. Hallock, treasurer; John A. Francisco, secretary. The date of the next show was set for Jan. 6 to 11, 1902. The secretary will be pleased to mail catalogue of last show giving full and complete awards to any one applying. Address,

JOHN A. FRANCISCO,
1202 Lincoln Trust, St. Louis.

---

The second annual exhibition, held Jan. 9-14, by the Gem City Poultry Association, at Dayton, Ohio, proved a very successful affair. There were over 800 entries, all classes being well represented, especially that of the Barred Rocks, they numbering 256. The quality of birds shown here were as good as can be found anywhere, and several received the remarkable score of 95 points. Judge D. T. Heimlich placed the awards, and gave general satisfaction. All premiums were paid on the last day of the show, and the management were highly commended upon the manner in which they handled their financial affairs. This is a business association, and has things on the boom. The membership is rapidly

## Ducks from Door-knobs.

Some incubators promise everything in sight; either ducks from door-knobs, or chicks from china nest eggs, and a full grown bird in a week or two. The

**PETALUMA INCUBATOR**

won't do that. It's just a good incubator—made for hatching eggs in the best possible way. It is made on scientific principles, of good honest material, by honest workmen. Consequently it will do all that a good incubator ought to do. We think our construction is a little better than any others; we are sure we take pains; we know we please the people. If you are looking for a machine that will hatch all the fertile eggs, you'll be interested in **THE PETALUMA.** Our large illustrated catalogue is sent free upon request.

**We pay freight anywhere in the United States**
We make a good brooder too.
Petaluma Incubator Co., Box 150, Petaluma, Cal.

F.B.W.Co.

increasing and from present indications the entries at our next show will far exceed those at our last. The next exhibition will be held Jan. 2-7, 1902, with James A. Tucker as judge. The management are determined to make it the banner show in this section, and will leave no stone unturned in carrying out their plans.

THEO FAULSTICH, Secretary.

The Sycamore Poultry and Pet Stock Association, Sycamore, Ohio, has elected the following officers: President, H. E. Kitcher; vice president, A. A. Snider; secretary, A. E. Bennington; treasurer, J. D. McEwen; solicitor, J. E. Gault; superintendent, J. G. Tuttle. The fifth annual exhibition will be held Jan. 1 to 4, 1902. George H. Burgott, judge.

At a recent meeting of the Indiana state board of agriculture it was unanimously agreed to hold the Indiana State Fair Sept. 16 to 21, 1901. It is proposed to make the 1901 meeting the greatest and most interesting fair in the history of the state. The premium lists will be issued early and a copy will be sent to all applicants. Address Charles Downing, secretary, Indianapolis, Ind.

Webster Poultry Yards, of Columbia City, Ind., won at Butler, Ind., as follows: Buff Rocks, 1st cockerel, 2d hen; White Wyandottes, 1st hen, 3d pullet, 2d cock, 2d cockerel.

*Daily Work.*

We are now rustling among 410 young Cochins and Barred Rocks. At this writing a snow covers the ground and as our chicks are in outdoor brooders it is a little more than play to take care of them. We have a movable roof over each yard and under this they will work, busy all day even in a snow storm, by throwing dry chaff under the roof. *O. E. Skinner, Columbus, Ohio.*

AN EGG-MAKING FACTORY.

Our illustration shows the well equipped factory of Humphrey & Sons, Joliet, Ill., where the celebrated Humphrey Green Bone and Vegetable Cutter is made. Undoubtedly the great favor with which the Humphrey Cutter has been received is, to a great extent, due to the superior facilities this factory affords for its manufacture. Messrs. Humphrey put out their machine with a positive guarantee that it will cut more green bone in less time and with less labor and greater ease than any other bone cutter made. There is no question of the value of cut green bone to the poultry raiser the whole year round; neither is there any question of the ability of the Humphrey Cutter, "the open hopper type," to cut it rapidly and easily. If you have not seen the Humphrey catalogue send for a copy—(a new edition, by the way, has become necessary). It gives the opinion of many leading fanciers and commercial poultrymen on the feeding of green bone, and contains blanks for a year's poultry record. You'll be glad to get a copy and they will be glad to send it to you. Address Humphrey & Sons, Joliet, Ill., and mention this paper.

*Brooder Chicks.*

A chick hatched as nature requires it in an incubator, and looks like a ball of down, is easily raised, if fed on dry grain and a different kind of grain at each meal, a variety is best; and remember, a hungry chick is the healthiest—don't overfeed. Never feed until crops are empty, and when five days old should be made to scratch for grain in straw cut short. Never feed chicks or hens mash. A hen or chick has a gizzard to grind her own food and if mash is fed the gizzard is idle and causes disorder of the stomach. The Black Langshans are the best layers on earth in winter and all seasons if bred right. *Jno. M. Sontag, St. Charles, Ill.*

**Porter's Barred Plymouth Rocks**

**W—I—N**

At the Bloomington State Poultry Show, under Judges Hewes and Russell we got the following winnings:
1st Cockerel scored 93.
1st Pullet scored 93½.
1st Hen scored 92.
1st Pen.
In a class of 159 B. P. R.'s and 57 Cockerels.

At New Albany Poultry Show, 1900, under I. K. Felch, Judge, we got the following winnings;
2nd Cockerel scored 92.
1st Pullet scored 94½, and a great beauty.
2nd Hen scored 92½.
3rd Pen scored 184⅝.

**EGGS** **EGGS** **EGGS**

We we will now mate up seven yards for Eggs, four yards for Cockerels, two yards for pullets and one yard Standard Mating. Eggs from the above yards will be $3.00 per setting. Incubator Eggs $6.00 per 100. We have 300 head of fine young stock yet for sale to quick buyers at low prices. Write your wants.

## A NEW RADISH.

The John A. Salzer Seed Company, La Crosse, Wis., are the introducers this year of a magnificent new radish, a radish fit for use every day of the year, hence they have named it "Salzer's Every-Day Radish." Of it they say it is a radish worthy to grace the table of every kind, monarch, president or citizen of the United States and the world.

There is nothing quite so rich, so luscious and fine, so tender and juicy and sweet and crisp, as Salzer's Every-Day Radish. It is a large red radish, shading into white, peerless in quality and beauty and is sure to give satisfaction. Not only are the Salzers introducers of new radishes, but they have a long list of vegetables that cannot be excelled anywhere.

Their catalogue is worth $100 to any wide-awake farmer and gardener and is mailed to you on receipt of but 5 cents postage.

## WISE SAYINGS.

In my twenty-five years with fowls I have never witnessed such an interest in the poultry industry as is manifested this season. It is simply wonderful. Just look over our poultry papers and see the names of breeders. East, West, North and South, everywhere.

* * *

The White Wyandottes have become justly popular on their true merit as market and home fowls. They are a true market bird and a typical fanciers' fowl, a stronghold in the show room and on the block—long may they live!

* * *

The Houdans are not only great layers, but are splendid table fowls, of good size, and are easily raised. Some do not seem to realize this. If you are thinking of taking them up, just remember what I have said, and see if it is not true.

* * *

In packing eggs for shipping, pack firm, and use a good strong basket. See that the handle is strong. It may save an endless amount of trouble. Some are not careful enough about these things.

JOHN M. WISE.

# Questions and Answers.

Our Subscribers are invited to make use of this department whenever we can be of service to them. All questions are answered in the order in which they are received. If your question is not answered in this number, look for it next month.

*Editor American Poultry Journal.*

DEAR SIR:—I am a subscriber to your journal, and in the past have received very satisfactory answers to all questions asked in relation to poultry raising. So I will venture to ask you a few more:

How long after laying will eggs remain good for hatching purposes?

Which is best, a very dry or somewhat moist yard for young chicks?

What are the best poles for roosts, flat or round?

At what degree of temperature does it become too hot or cold for the welfare of grown chickens in their house?

What is the best method of keeping eggs, anticipating raise in price, etc.?

Lopez, Pa. J. S.

The length of time which eggs will remain good for hatching varies according to the strength of the germ and conditions under which the eggs are kept. The fresher the egg the better the results. We would not advise keeping them longer than two weeks. They should be kept in an even temperature of about 60 degrees and should he turned daily. Under these conditions eggs could be kept 30 days and then produce some results.

A dry yard is best for young chicks.

A square pole with the edges rounded off makes the best roost.

The temperature of a nice spring day is the most desirable for the poultry house.

The best method of holding eggs for high prices is to put them in cold storage. Strictly fresh eggs may he kept several months if properly packed in salt. We believe that the best method in the one with water glass described on page 708 of December number A. P. J.

*Editor American Poultry Journal.*

DEAR SIR: Will you kindly advise if there is a fowl native to the island of New Zealand and what the special qualifications are if any?

Are there any in the United States? I thank you in advance for the anticipated favor. G. A. P.

Butler, Ind.

The only native New Zealand fowl is one called the Apteryx. It is a wingless one and is almost extinct. The poultry found there are all imported birds.

*Editor American Poultry Journal.*

DEAR SIR: I have fifty hens which I am keeping for eggs. Thirteen of them are pure-bred White Leghorns, the others mixed breeds. I feed cracked corn, wheat, oats, buckwheat in the morning and a warm mash of beef scraps, clover meal and corn meal at night. I am getting on an average eight eggs per day, which I think is not nearly as many as I ought to get from so many fowls. If you could give me a pointer which would enable me to get more eggs, I would be very glad. I have a good warm house in which two-thirds of them are kept.

Tioga Center, N. Y. C. H. B.

We are sorry that we cannot offer you some suggestions which might prove of value hut the information you give is entirely to meagre to even hazard a guess. You are certainly not getting as many eggs as you should. The articles of feed seem to be all right. You do not say, however, how much you feed to a given number of hens. Neither do you state how much house room you have or whether the entire flock is kept together. In fact you do not give any details of housing or management and these items are the whole thing when it comes to getting eggs. Read the article "Winter Feeding" on page 23 of January number.

*Editor American Poultry Journal.*

DEAR SIR: I would like to ask you some questions. A year ago I bought two dozen scrub hens and after seeing your journal became interested in Standard bred fowls. I sent for a number of settings of eggs of Buff Cochins, Light Brahmas, White Wyandottes and Barred Rocks. I raised about 90 in all. Last fall I purchased a breeding pen of Buff Cochins, which cost me about $12. I became quite interested in fine poultry but the harn on the place where I rented was no good. I boarded it up inside and stuffed the space between, with straw to make it warm, but still my chickens don't seem to do very well. A great many must have taken cold and contracted the roup. I don't really know if that barn was too warm or too cold or what the matter is. Could it not be too warm? Won't fowls catch cold more easily when they are warmly housed and then go out in the cold, than if they were hardened to cold weather? How much of a house should I have for about 100 chickens, in order to keep them profitably? Where can I get the best plans of poultry houses and would it pay better to get the movable houses as I have to rent and don't know how long I will stay on the place. How many birds can I keep on a piece of ground 280 feet square. I thought of huying a 100-egg incubator and begin slowly. Am I on the right road or not? What would you advise me to do? My health is failing and I must have outdoor work. I like poultry and want to work up gradually as a breeder of fine stock. Do you know anything about the Belgian Hare business?

Humphrey, Neb. A. V. B.

We believe under the circumstances that you would do well with fowls if you will become thoroughly posted and start in on a small scale. The fact that you like the business will be quite a factor in your success. In a case like yours we always feel an interest in seeing the party succeed and would gladly give you columns of instruction and information if time and space permitted. In order to cover such cases as nearly as possible, we have just gotten out a book on "Why Poultry Pays and How to Make It Pay." It treats the matter in a thorough and exhaustive manner and tells plainly just what the title indicates. We also have one on "How to Build Poultry Houses" which gives plans and illustrations of all kinds and styles of houses, fixtures, etc. We will mail either of these books to you for 50 cents each or the two together for 75 cents. The harn you refer to may have heen too warm, hut we doubt it. It is entirely possible to have your birds too warmly housed and colds and other evils result therefrom. A house for 100 birds should he divided

into about seven or eight pens 12x12 each pen to accommodate about 12 or 15 birds. A piece of ground 280 feet square could be divided into 20 pens 28x140 feet and under proper management 25 to 30 hens could be kept profitably in each pen. Your idea of starting in on a small scale is all right, but starting with 100 hens is not on a small scale. Relative to the Belgian Hare business will say that there seems to be money it for some people, but in your case we believe you would do well to try poultry first.

---

*Editor American Poultry Journal.*

DEAR SIR: Will you kindly answer the following questions in the next issue of of the A. P. J.?

What should eggs be packed in for winter use, and when should they be packed?

For the Chicago markets should broilers and ducklings be dry picked or scalded?

I have a pullet that I wish to mate during the season to two different males. Now how long will it be after I have put the second male with her before I can be sure that the eggs were fertilized by him?

Osage, Iowa. M. L. W.

For information relative to packing eggs see answer to J. S. in this number.

Broilers and ducklings for Chicago market should be scalded. Send to Sprague Commission Co., 218 So. Water St., Chicago, for a copy of their booklet containing full information for shippers of poultry. It is free.

Eggs will be fertilized by the last male after the fourth or fifth egg has been laid.

---

*Editor American Poultry Journal.*

DEAR SIR: Please answer the following questions. In your November number you say "a good layer can with very little practice be detected by the formation of her head and eye." What is there special about the head and eye of a good layer? Are Minorcas good winter layers? Is there a rose comb White Minorca?

New Haven, Ind. D. McC.

It is claimed by many experienced breeders that the best layers of any variety usually have a neat, finely shaped head, and the eye is bright, intelligent and rather restless looking. It is a condition hard to describe but easy to discern with experience. The Minorcas are good winter layers if properly housed. We have never seen or heard of a rose comb White Minorca.

---

*Editor American Poultry Journal.*

DEAR SIR: Will you please tell me through the columns of AMERICAN POULTRY JOURNAL what is the best kind of basket to use in shipping eggs for hatching and how to pack the eggs and mark the basket? MRS. G. G. M.

Chariton, Iowa.

Many breeders use the ordinary splint baskets, which may be obtained anywhere for 5 cents each. The eggs are wrapped in paper and packed in chaff. Sometimes the paper is not used. All kinds of suitable material from chaff to cotton and sawdust is used. The best plan with these common baskets is to line the sides and bottom with excelsior. Make a lot of small nests from the same material just large enough for the egg. Put the eggs in them and close the excelsior up around the egg. Fill the basket and put a heavy layer of excel-

# Snugly Tucked Away

There are often a thousand lice on one fowl or hog where a careful inspection would not reveal a dozen. When Lee's Lice Killer is used, it kills not only the mites on the roosts and about the poultry house, but also all the body lice on the fowls. That's just the difference between Lee's Lice Killer and cheap imitations. They all kill some lice, but Lee's Lice Killer gets them all. You can take a lousy chicken or hog that has been treated with other lice killers and insect powders, and by use of Lee's Lice Killer bring to light more lice than you ever dreamed existed on a chicken or hog.

## Lee's Lice Killer

Is applied to tbe roosts for poultry; on bedding or rubbing posts for hogs. It kills all mites and lice on the roosts or wherever applied and it then evaporates, forming a gas of the same weight as air. Tbis gas or vapor penetrates the feathers of the chickens or the bristles of a hog, killing all insects on their bodies. A portion of the fluid evaporates more slowly, remaining about the place for a long time, disinfecting the premises and excluding all insect life. Lee's Lice Killer is never sold in bulk. When you buy it in our original air-tight packages you get it full strength, undiluted. For sale in every State in the Union: endorsed by Poultry, Farm and Stock Journals everywhere. Send for handsomely illustrated booklet with testimonials and vainable information to the raiser of poultry and stock. Special introductiory offer to points where we have no agent.

***Price, qts., 35 cts.; half gallons, 6o cts.; gallons, $1.00.***

***GEO. H. LEE CO., Omaha, Neb.,***

***Or No. 8, Park Place, New York.***

## BAILEY'S BUFF ROCKS

**WIN MOST**

At three big shows. Score 92¼ to 94 by Bridge and Russell. Judge Bridge scored 5 hens 94, 93¾, 93¼, 92¾, 92. They weighed 7¾ to 9 pounds. Four grand yards mated to winning males. Eggs $2 per 15; $3.75 per 30, that will hatch winners. Pen 1 is headed by Gold Mine Jr., score 94. Eggs exclusively from this pen $3 per 15. A fine trio left at $5; another at $10; 4 cockerels $1 each. Satisfaction guaranteed. Free circular. Write.

**F. C. BAILEY, Route 1, Reading, Mich.**

sior on the top. Take a piece of cotton goods and stretch tightly over the top under the handle and sew it around tbe sides and ends. Use a darning needle and cord. Take a shipping tag whicb tbe express company will furnish you free, and write on it the address and tie to the handle. There are a number of patent baskets advertised in AMERICAN POULTRY JOURNAL which are handy others. Tbe weatber does not get cold enough to injure eggs if properly packed and not unduly exposed to the outside weatber.

---

*Editor American Poultry Journal.*

DEAR SIR: I would like to ask you two questions. Is broken glass good for poultry in place of grit? Is partly burned bone of any value to feed to fowls? C. W. S.

Baldwinsville, N. Y.

Broken glass makes poor grit. We would not advise the use of it as tbere is some liability of the birds being injured in swallowing it. Broken cbinaware is just as cheap and much better. Burned bone is of no value whatever. It is not even a good substitute for cbarcoal. Bone witb the substance and life all burned out of it is no more fit for food for fowls than meat burned to a crisp is fit for people.

---

*Editor American Poultry Journal.*

DEAR SIR: Please describe in your Journal tbe Single and Double mating systems, also line breeding. I am new at tbe business and don't know how to mate my birds. J. L. N.

Greencastle, Ind.

See answer to C. E. M. in this number.

---

*Editor American Poultry Journal.*

DEAR SIR: Please answer the following in the next issue of the AMERICAN POULTRY JOURNAL. Does line breeding hurt the vitality or cause the breed to get smaller? For instance, take a pair of fowls and breed their progeny back to them, does it decrease their size?

What is the difference between what they call a "full-featbered" and "American" Partridge Cochin?

Can you ship eggs in cold weather and get a good hatch? F. E. M.

Louisville, Kan.

Line breeding will not decrease the vitality of a flock if practiced intelligently. Your suggestion is all right for the first season. Read the article on page 234 in the March number of AMERICAN POULTRY JOURNAL.

Tbe difference between full feathered and the so-called American Cocbins is principally in the body leg and toe featbering, which on the full-feathered birds is much more profuse tban upon the others.

---

*Editor American Poultry Journal.*

DEAR SIR: Do the Silver Laced Wyandottes occasionally throw chicks with single combs? I have stock from two noted breeders and last year I bad a good many single combs. I do not know wbat to think about it. They were first rate in every otber respect, large, well built and well laced. E. M. T.

Delrey, Ill.

Tbis is not an uncommon occurrence. It happens frequently in some of the best flocks and is liable to bappen in any one.

---

*Editor American Poultry Journal.*

DEAR SIR: Can you tell me through the JOURNAL what kind of seed to sow in

a peach orchard to make the best green pasture for chickens? I have seen a report from some poultry man that green rye would stop hens from laying. Can you tell me if this is true? J. D. S.

Dyer, Tenn.

Alfalfa is one of the best green foods and we do not believe you could do better than with it. Rape is also a very desirable plant for the purpose. We hardly think that green rye will stop hens from laying. We know of many cases where the birds do well on it.

---

*Editor American Poultry Journal.*

DEAR SIR: Will you please explain through your most valuable journal single and double mating, also line breeding. Would it be a good idea to mate a two year old cock to one year old pullets, and cockerels to hens two years old? Will you please explain a few points of the English Red Caps and the Silver Spangled Hamhurgs? C. E. M.

Brazil, Ind.

You will find double mating thoroughly explained on page 599 of the October number. If you do not have it send 5 cents in stamps for a copy. We cannot take the space here to explain it. Single mating is the mating of exhibition colored birds to produce the same. Line breeding is fully explained on page 234 of the March number. We cannot give you an intelligent description of the breeds you mention without practically quoting the standard, which is copyrighted and cannot be reproduced. Your ideas relative to mating as regards the age of the birds are all right.

---

*Editor American Poultry Journal.*

DEAR SIR: Would a room sided with common inch siding put on in a workmanlike manner be warm enough for an incubator? Can eggs be shipped and afterwards hatched successfully. If so how far can they be shipped. G. L.

Fairmount, Ind.

A room such as you describe would be all right in which to place an incubator if the temperature can be kept reasonably even. That is the main point in selecting a location for the machine. Eggs may be shipped almost any distance with assurances of a reasonable hatch if they are carefully handled enroute and are properly packed. We have known them to produce good results after having heen shipped 3,000 miles.

---

*Editor American Poultry Journal.*

DEAR SIR: Several of my yearling Buff Rocks have been afflicted with a disease which I cannot understand. Usually the first symptom, I observe, is a weakness of the legs, that is, they totter from one leg to the other; later the neck is bent so that it forms a loop projecting forward, the head being set hack on the shoulders. I have examined the neck and find it takes some force to straighten it, and it goes back just as before.

They eat until the last stage when they cannot seem to be able to get their beaks to the ground.

All afflicted before have been hens, now I have a 1½-year-old cock acting the same.

Their combs are hright and red; they are not very fat and, I do not think, overfed. In the summer they had free range and there was no large quantity of anything for them to overfeed on. Now, they have mash in the morning and wheat and oats at noon and night in their scratching shed. Have free range

**White Rocks.**

## EPPERSON'S BARRED PLY. ROCKS

**and Mammoth Bronze Turkeys**

My birds are all farm raised. Will have five yards for 1901. Eggs, $3 for one sitting; $5 for two sittings. No more stock for sale until fall. Satisfaction guaranteed. Reference, Champaign National Bank. No turkey eggs for sale. Farm three miles from city.

***E. H. EPPERSON, Box 226, Champaign, Champaign Co., Ill.***

on fine days. They also have grit, oyster shells and plenty of water. Please help me out if you can. E. E. N.

Columhus, Wis.

We do not know what the trouble could he unless it is rheumatism. We would suggest that when the stiffness of the neck is first noticed, you rub it well and often with some good liniment. Try this and let us know the result.

---

*Editor American Poultry Journal.*

DEAR SIR: Please be kind enough to answer the following questions: I have had three birds troubled with some disease unknown to me. They sit around sleepy and lazy and in about two weeks they become so they can hardly walk. I killed one and upon examination found a large gall hanging to the liver. The other two I killed when they first became affected. What was the trouble with them? In another case a bird had a brown colored lump about half the size of a cranberry growing on the top of the beak below the nostrils. I caught her and by lifting it a little it broke off and the shell of the beak came off, too. Others were affected hut the lumps finally disappeared and they got well again. One of my old birds was sick for some time and finally died. She sat around all the time and toward the last could not walk or eat. Upon examining her after she died I found between the skin and the flesh a hig bag holding ahout a pint of very clear water. What was the matter with her? A. A.

Jersey City, N. J.

In the first case the fowls were no douht troubled with a form of liver disease known as biliary repletion. It is caused hy too large an accumulation of bile in the gall hladder which distends the organ. It is absorbed hy the blood vessels and causes death. An attempt to cure the disease would hardly he profitahle or successful. In the second case the hirds had chickenpox or sore head. These scabhy excrescences should not he removed. Anoint them frequently with carholated vaseline. The old bird was afflicted with ahdominal dropsy which in young birds is supposed to be due to anaemia and in old ones to the ohstruction of venous circulation. There is nothing to be gained by treatment.

---

*Editor American Poultry Journal.*

DEAR SIR: Will you please inform me where I can obtain a copy of the Standard of Perfection? C. W. W., JR.

Van Wert, O.

We can send it to you postpaid for $1 which is the regular price fixed by the American Poultry Association.

---

*Editor American Poultry Journal.*

DEAR SIR: I am huilding a house 16x10 feet, 5½ feet high at back, 7½ in front. Am putting in windows 36x40 inches, two of those in the south side, 10 inches from the floor. It is shingled, sided in and battened good. How many chickens will it accommodate to advantage? Leghorns are the fowls. Would it be big enough to divide in two. How large a yard would I need to keep them in laying condition. I would he greatly obliged if you would enlighten me on this suhject. Will a 4-foot fence confine Golden Wyandottes or not? J. H. E.

Essex Town, Ont.

Your house could he divided into two pens 8x10 feet and make good quarters for Leghorns. The house as you have built it is a little larger than is necessary for one pen and not quite large enough

for two. 12x12 is a good size. In each of the 8x10-foot pens you could keep about 10 birds. Under these conditions they should have as much yard room as you can give them. Each pen should have for best results, a yard not less than 10x100 feet, although good results could be obtained with less room with proper care.

A four-foot fence will confine Golden Wyandottes if they have been raised in close quarters. Birds brought in off a large range will not be contented in small runs and will readily fly over a four-foot fence. They will do so anyhow if confined in bare runs alongside growing vegetation.

—o—

One of the most profitable and most generally useful articles about a modern farm is a sprayer of some kind. No poultry farm is considered completely equipped in this day unless it has a sprayer. It is the most satisfactory and economical way of applying lice killer white-wash, and can be used not only inside the houses but outside for fences, and in cellars, in fact, wherever it is necessary to apply any such solution. Then, too, almost every poultry farm is cultivating more or less fruit, vegetables and other crops and there is almost no

end to use for a good sprayer in these lines. The Deming Company, Salem, Ohio, make more than a dozen varieties of sprayers with brass working parts, patent automatic Kerosene Emulsion Sprayers, etc. The Century Sprayer, shown by the above cut, is one of their popular orchard sprayers. It is very durable in construction, has brass cylinder, brass ball valves, Deming Automatic Agitator, and everlasting fabric plunger packing, and the liability to get out of order is reduced to a minimum. How to spray is learned from "Spraying for Profit," an illustrated 72-page book which readers of our paper can get from them at 10 cents per copy. Their spray pump catalogue will also be sent with this book on application, with an "X-ray" photo of the Century Sprayer, showing working parts.

Mr. Geo. H. Northup, Box 231, Raceville, N. Y., reports a very large trade this season in both stock and eggs. His strain of Black Minorcas is and always has been very popular and in great demand. He claims in his adv. that his birds have never lost a special for large size and that they have won more prizes for his customers in strong competition at New York, Boston, Washington and other leading shows than any other four strains combined.

**Just as I Expected.**

When you found I had a GOOD thing in Buff Rocks, you wanted them all. Well, you have got them. You have drained me. BUT I HAVE GOT ANOTHER GOOD THING! IT'S EGGS. $5.00 buys 15. My matings cannot be beat. But for "Heaven's Sake" don't order them by the crate.

H. D. FOSTER, Gowanda, N. Y.

**Barred Plymouth Rocks and M. B. Turkeys.**

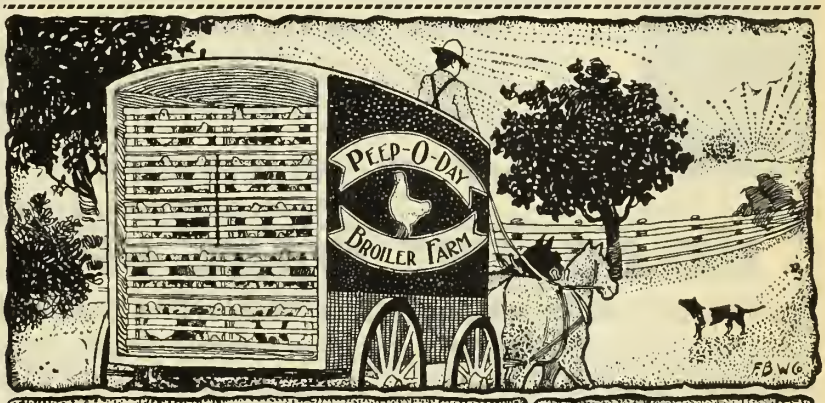
100 more Barred Plymouth Rocks for sale from my prize winners. Won 1st, 2d and 3d pullet and 1st pen at Southeastern Wisconsin Poultry Show, in Jan., 1900. Barred Rock pullets and hens and a few pullet-breeding cockerels, $1 each. Exhibition breeding cockerels, $2. This stock is good—not pretty good—but GOOD. Turkeys $2. They are pure M. B. and monsters. My birds are grand in shape and in color and barred to the skin. Barred Plymouth Rock eggs $1 per 15, from either one of 4 grand pens. If you want good stock and fair treatment send your order to

J. D. BUCKLES, Walworth, Wis.

**Brook's White Rocks.**

I have now mated up my breeding pens of White Rocks and can fill your order for eggs at $2 per sitting of 15. My breeding birds are big healthy, fine-shaped specimens, as white as the whitest and fit to win at Chicago. Eggs at above price from the best females, mated to my 4th-prize cockerel at Chicago this year.

OSCAR E. BROOKS, Edison Park, Ill.



THE INEXPERIENCED

**STARVE THEIR CHICKS**

by not giving them food rich in protein which they need to develop them. If you will **begin right**—feed our foods from the time the chicks come from the shell, we can reduce the mortality and give you pullets which will begin laying when five or six months old.

**DARLING & COMPANY'S**

**Beef Meal, Concentrated Meal and Beef Scraps contain from 60-65 Per Cent Protein.**

They cost no more than others, but go much further.

Push your broilers, develop your chicks and get lots of eggs by using our goods. Our Booklet, "Fill the Egg Basket" tells you all about them. We send it free upon request.

**R. A. McCLELLAND, Yorkville, Ill.**

# Eggs From World Beaters!

**Barred, Buff and White Rocks.**

Barred cockerels scoring up to 95; pullets 93½, Buff cockerels 94½; pnllets 94½. White cockerels 95; females 96 15 eggs $2; 30, $3.50. Pen headed by 95 Barred cockerel, 15 eggs $3; 30, $5. Warrant a good hatch. Birds scored by Rigg and Russell.

**J. T. MALLOY, Box 30, Laurel, Iowa,**

# WRIGHT'S WHITE WYANDOTTES. BLACK ROSE COMB BANTAMS.

15 regular and several special prizes on 19 entries at Racine, Wis., this season, iucluding silver cup for best display on Bantams, birds scoring from 95 to 95¾. On Wyandottes we won 1st hen, 1st and 3d pullet, tie for 2d. Have others scoring within a fraction of the winners. I have the two best males exhibited at this show and one of them is for sale (score 94). Am now booking orders for a limited number of eggs, either variety. at $2 per 15. You get the same kind of eggs that produce winners for me, and they will do it for you. You will not make a mistake in sending me a trial order.

**FRED L. WRIGHT, Racine, Wis.**

## CUBAN FOWLS.

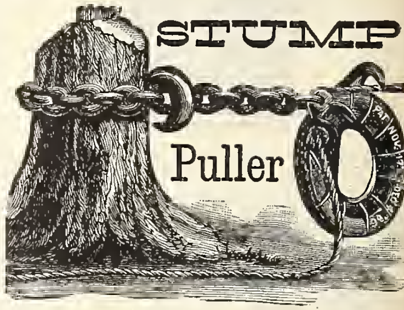
*Editor American Poultry Journal.*

DEAR SIR:—I have just been presented by a gentleman (who owns a few fowls) with an egg that measures 6 inches in circumference and 7½ inches the long way. He had five others the same size. He claims they were laid by Cuhan birds. I have searched the AMERICAN POULTRY JOURNAL, but cannot find trace of this hreed. Will you kindly give a description of the Cuban fowl in the next issue. He says three of the Cuhan eggs are equal in weight to five White Leghorns. I presume this would he considered quite a large egg. He has only two of those birds and they were hatched the 24th of last May. Just commenced laying.

The above communication has been received from a suhscriber at Belleville, Ontario, and if any of our readers can give any information regarding the Cuban hirds we would he pleased to hear from them. We are inclined to helieve that the eggs are abnormally large for some reason, probably the overfat condition of the hirds which, while they may have come from Cuba, are prohably a mongrel breed. We have seen Minorca eggs nearly as large as these.

## A HARD PROPOSITION.

A piece of stumpy land is ahout the hardest proposition that a farmer can run against. With the modern appliances such as are manufactured by the Milne Mfg. Co., of Monmouth, Ill., it is an easy matter to clear a piece of stumpy ground. Their Hawkeye Stump Puller or their 1 X 1 Grubher will do the work to perfection and with great ease and rapidity. The accompanying illustration shows their patent wire rope coupler by which



the chain which goes around the stump is fastened to the wire rope, by means of which you can fasten at once to any stump or tree standing anywhere along the line of the rope without waiting to wind up until the end of the rope is brought to the stump or tree you wish to pull. If you have a piece of stumpy ground it will pay you to send for the Milne Catalogue. It is full of information on the suhject of clearing land. Mention this paper in writing them.

## *House Cleaning.*

Most poultrymen are too careless about keeping a nice, clean house. Disease never lurks in clean, pure buildings. A good plan is to clean out once a week sure and oftener will not hurt. I clean out once a week regular, and since I have made this a practice my fowls are seldom affected with any disease. Then, besides, the droppings are very valuable as fertilizer. Spread them on evenly over your truck patch. *Geo. Hazlett, Pettit, Tippecano Co., Ind.*

# BLACK LANGSHANS.

One cock and a few choice cockerels, hens, exhibition and breeding stock left. Extra good breeders $5 each, 2 for $9, 3 for $12; fair to choice at $2 to $3 each, $7 per trio; exhibition stock at $7½ to $10 each, 3 for $20. **THE LAST OFFER.** Order at once direct from ad. Big value, extra cheap considering high quality. Bred from a 96-point cock and 95-point cockerels, all grand in typical Langshan shape and fine in color, very free from purple barring. Eggs from imported stock at $5 per 13 straight; eggs from best pens, American stock, $3 per 15 straight.

**IMPORTED STOCK DIRECT FROM CROAD'S YARDS, ENGLAND.**

Last shipment arrived Dec. 22. At Hoopeston, Ill., tied on 1st cockerel, won 2d and 3d cockerel and a good share of prizes on hens and pullets. At Paxton, Ill., won 1st cock, 1st hen, 1st and 2d pullets. If you are looking for a grand show bird, breeder, pair, trio or pen, write me before placing your order.

**GEO. S. DUFFIN, Hoopeston, Ill.**

# CHAMPIONS of the SOUTH!

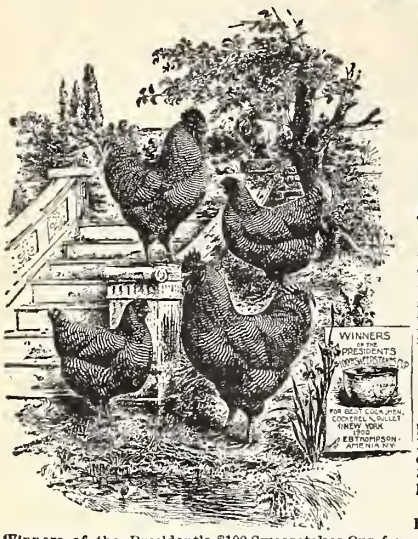
**HONESTLY AND TRULY,** we have the choicest and most noted exhibition and breeding stock in Dixie. **JUST THINK OF IT!** At the great Arkansas State Show, one of the very largest and best ever held in the South, we entered 50 birds and 42 proved winners against the pick of a dozen States. Won first prizes in every variety we breed. For years we have been telling you the high quality of our stock, and surely the above most remarkable and unheard of record ought to be convincing.

**Yes, Still Giving Away Bargains.**

**1000 Grand, Line-bred Exhibition and Breeding Stock to Select From. 1000**

Barred Rocks, Indian Games, Silver Wyandottes, Light Brahmas, Buff Cochins, Pit Games, Pekin Ducks, Wild and Bronze Turkeys. A trial is all we ask. So for your own sake, try us, for we will please or it costs you nothing.

***Ouachita Valley Poultry Farm,*** ***G. W. BROWN, Prop., Camden, Ark.***



Winners of the President's $100 Sweepstakes Cup for best ck., ckl., hen and pullet at New York, 1900.

# THE "RINGLETS" Soar Still Higher

**at New York the world's record of**

## E. B. THOMPSON'S BARRED P. ROCKS

**Four Years in Succession** was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the **Annals of the New York Show, winning, during four years in succession more than three time as many first prizes** as any other exhibitor, and as many **First Prizes** as **ALL Competitors Combined, Twice as many Cups and Specials** as all, including the **Superb Challenge Trophy**, value $100, for best ck., ckl., hen, pullet and exhibition pen. **$100** Silver Cup for the finest exhibit; **Grand Special Prize** Sweepstakes Cup value $100, presented by the President for the best Plymouth Rock cock, ckl., hen and pullet, **any variety.**

### MY CLEAN SWEEP

**1st, 2d, 3d, 4th and 5th PRIZES ON PULLETS**

has never been approached in Madison Square Garden, and stands **alone and unequalled. The "Ringlets"** also holds the **World's Record** of 1st on Exhibition Pen **at New York three years in succession.** With their 1900 record the **"Ringlets"** have won at **New York** a grand total of **77 prizes, 31** of these are **1st and Specials,** being **17 more 1st and Special Prizes** than won by any competitor in the history of the show.

**GRAND STOCK FOR SALE,**

In any number. **600 Choice Breeding Cockerels. RARE BARGAINS in Yearling Breeders. Show Birds Fit to Win in the Fastest Company. Eggs** from **Finest Exhibition Matings,** one sitting **$5**; two sittings, **$9**; three sittings, **$12**; four sittings, **$15. Richly Illustrated 24-Page Catalogue** on application. It is full of original illustrations and New York winners from life.

## Eggs That Will Hatch Winners,

FROM

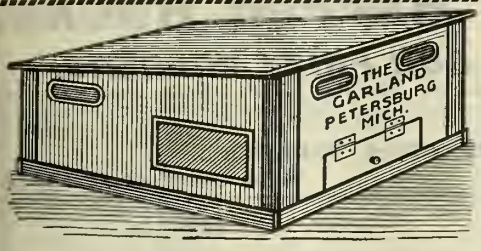
**A. P. Worthington's Quillhurst Farm, Elyria, Ohio.**

Light Brahmas, direct from Felch. R-c. Brown Leghorns, 1st Galva and Galesburg. S-c. Brown Leghorns, 1st Painesville, Wellington and Toledo. White Wyandottes that are white and great layers. White Langshans, White Indian Games and S-c. White Leghorns. Eggs $1.50 per sitting. Satisfaction guaranteed. 2,000 hens mated for broiler eggs at $4.00 per 100.

## BAILEY'S BUFF ROCKS

Win most of the prizes at three large shows, scoring 92¼ to 94, by Bridge, Russell, Tucker and McClave. Pullet "Pure Gold" scores 95½, now for she is up to weight. A full sister 95. Both have been winners. Hens and pullets weigh 7 to 9 pounds. Four grand pens mated—the even, golden buff kind, bay eyes red ear lobes and clean shanks. Eggs that will hatch winners. Part from each pen $2 per 15; $3.75 per 30; $10 per 100. "Gold Mine Jr.," score 94, heads pen 1. Eggs from this pen exclusively, $3 per 15. I guarantee a good hatch or more eggs free if you say fault was mine. A fine trio left at $8; also a few cockerels that are right, $2 to $5 each, Free circular. Perfect satisfaction or money returned. Write

**F. C. BAILEY, Route 1, Reading, Mich.**



## We Place Our Standard High

And then strive each year to outshine the best achievements of the year before. Our mastery of the markets and our thorough determination to undersell, have placed us conspicuously above all others in bargain giving. During the next 90 days we will offer Naylice Insecticides at prices that will move tons of it to all parts of the world. Naylice and Liquid Naylice is the standard of excellence and is used and endorsed by thousands of poultry and stock keepers throughout the United States and foreign countries. Naylice Insect Powder will rid your poultry of vermin as rapidly as you can apply it—kills lice instantly. Special price, $1 per doz. for 12 oz. cans. Liquid Naylice, the best liquid vermin destroyer in existence. Special price, 50c per gallon can, crated for shipment. For $1 we will ship one 1-gal. can of L. N. and ½ doz. cans of Naylice. Why let vermin eat up your poultry and profits when you can so quickly and so cheaply put a stop to it. We manufacture the "Garland," the brooder that is different from all others. Our catalogue is free.

**THE RAISIN RIVER BROILER PLANT, Petersburg, Mich.**

## Barred Plymouth Rocks.

Winners at Indianapolis and Danville, Ill., with the following scores: Cock, 91½; hens, 93½, 93½, 93, 93; cockerels, 93½, 93½, 93, 93, 92½; pullets, 94¼, 94, 94, 93¾, 93½. At the great Columbus, Ohio, Show, I won 1st on cockerel, 1st on breeding pen (tied on 1st pullet), and Silver Cup for highest scoring male and female.

***Eggs $3 per 15 from same yards I breed from.***

**DANIEL CHRISTIAN,**
**Huntington, Ind.**

## QUIRK'S BROWN LEGHORNS

We are now booking orders for eggs for spring delivery. At Michigan Fanciers' Association show at Battle Creek, Dec. 4-7, 3 birds entered; won 1st on Cockerel, 1st on Pullet. ## AT THE

# O. K. White Plymouth Rock Farm

We have a choice matlug composed of the following high-scoring females: 92, 93, 93, 93, 93½, 93½, 93½..94½, 95, 95, headed by a graud cockerel scoring 95½, from which we offer eggs at $2 per 15. Poor hatches through fault of eggs duplicated at half price. This pen is remarkably white throughout, with rich bay eyes, low combs and vigorous constitution. Mated for best results by au expert breeder and judge of 20 years' experience. Don't miss this bargain.

**H. E. RINEHART, Mgr., West Cairo, Ohio,**

---

# Leffel's Unconquerable Barred Rocks

## Always Win Lions Share of Prizes.

First Prize Pullet, Cleveland, O., Show, December, scored 94½ by L. G. Jarvis, Guelph, Canada.

If you do not believe it **SEND AND GET HIS CATALOGUE** and it will tell you who scored his birds. He stands in front, with highest scores by leading judges. I. K. Felch gave one of his cockcrels score of 95 points, and wrote across score card, every doubt given against this noble big follow; weight, 11 lbs. H. A. Bridge gave one of his birds score 95 points. B. N. Pierce cut one of his cockerels one-half in color. L. G. Jarvis, Guelph, Canada, scored 4 birds 94½. J. Y. Bicknell scored cockerel 94½. Charles McClave, 93½ scores of birds. I have exhibited 30 times in past 8 years and won 29 times on cockerel, and tie the other one score. Sharp Butterfield scored 3 cockerels in one show 93½. Send for my catalogue and see my winnings and scores, and who scored them, and you will say he leads the procession in winnings.

## Never Lost on Breeding Pen

in any score-card show, nor any pullet where they were weighed and weighed correctly. Eggs $3 per sitting. Only lost once on first cock. I won all prizes at Springfield, O., Aug. 21-24, 1900, all prizes offered. My strain won all prizes at Urbana, O., Aug. 14-17, 1900, this season making 30 times I have exhibited in 8 years. No breeder ever made such record.

**Ten Times I Have Won Every Money Prize Offered. Eggs $3 per sitting.**

500 cockerels—choice ones—for sale, and pullets in any number. I have a grand lot of show birds for winter shows. They never fail to win for me, and they will win for my customers. Residence, 363 South Fountain ave. Farm one-half mile from city. 265 acres.

***GEO. M. LEFFEL, Springfield, Ohio.***

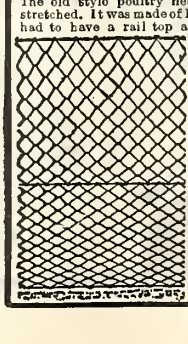
## IT NEVER SAGS
The old style poultry netting could never be properly stretched. It was made of lightest wire and being "flimsy" had to have a rail top and bottom to make it worth anything. That made it expensive and less effective. Our



**Patent "ACME" Poultry Netting**

avoids all these deficiencies. Is made of strong wire with extra heavy strong wires top & bottom and in the middle. Stretches well and stays stretched. Note the graduated mesh; from 1¼ in. at bottom to 3 in. at top. Made from 36 in. to 72 in. high. It will please anybody seeking a good netting. We make Lawn and Farm Fencing and Gates. **Catalogue Free.**

**The Detroit Fence Co., Detroit, Mich.**

## HOLLIS' WHITE ROCKS.

I think that ten years of exclnsive breeding of White Rocks ought to teach me how to get good ones. Other people have found it so and so will yon. I have the right quality at the right price. Eggs, $3 per 15; $5 per 30.

C. A. HOLLIS, Hudson, Iowa.

## Bonniwell's Buff Rocks

Still holds the record at the great St. Paul Show. Winnlugs this season were 1st, 2d aud 3d hen, 2d cockerel, 1st pullet, 1st pen, best cock and best display. The class was hlg and quality the best. My first hen scored 94¼. I have a limited number of eggs for sale from best birds. They are large, well-shaped birds with good combs, and are the proper shade of Buff. Burdick's Nugget Strain.

H. H. BONNIWELL, Box 395, Hutchinson, Minn.

## Stone City Poultry Farm.

The record of my birds in the show room pnts them in the front ranks. They are the kind that win. My surplns stock is uow closed out, but I am ready to fill orders for

***Eggs for Hatching.***

Fertile eggs from healthy, high scoring birds. You will find no better Rocks anywhere. I won first on cockerel at Palmyra, Ill., scoring 92½, I. K. Felch, judge. Seud for price list.

*JAMES CHRISTOPHER,*

Kickapoo Poultry Yards, Heyworth, Ill.

## HOUDANS

(Line Bred Since 1874)

***The Standard of Houdan Excellence in America. The Large, Dark Typical Kind.***

**Wonderfully Proficient in Egg Production.**

Price of Eggs: One setting $5.00; Two settings $8.00; Three settings $10.00. Positively uo reduction on larger orders.

THOS. F. RIGG, Iowa Falls, Iowa.

# BARRED ROCKS.

**FELCH'S VERDICT** was that my first prize cockerel at the Indiana Poultry Association Show was the best Barred Rock cockerel he scored last season. He reached the remarkable score of 94 points. **I have many other birds in my breeding yards just as good as he is.** Some of these are now for sale at reasonable prices. My entire exhibit at the Kentucky State Poultry Show scored from 92¼ to 93¾. Eggs after May 15 at the redneed price of $2.50 per sitting.

**EDW. McCULLOCH, New Albany, Ind.**
**Sec'y Indiana Poultry Assn.**

# Buff Wyandottes.

Winners at Chicago. Winners everywhere. Nothing better than the line bred "Denison Strain." Try them. Males heading one yard score 91½ to 94½; females 93 to 94½. Eggs $3 per sitting. Place your order early. Incubator eggs, from good breeding stock, $10 per 100.

**MRS. J. M. DENISON & SON, Elgin, Ill.**
**Sunny Slope Farm.**
Mention American Poultry Journal.

# You Can Beat the Band, or the Express Co. Either,

By buying eggs for hatching. You do not have to pay two rates on them as on breeding stock. You can raise your own winners, save that $10 to $25 per show bird you paid Brown or John Jones, and laugh at your neighbor because he said there was nothing in it. We sell you the eggs from our best matings at only $3 per sitting of 15 or $5 per 30. Will positively make no further reduction as we send you from the same pens we set from in our own yards. Remember, we breed Barred Plymouth Rocks exclusively, and have had twenty year's experience with this breed. We have furnished winners in many of the largest exhibitions of the past, also winning in our own exhibit at Cedar Rapids, Ia., Jan., 1900, the most valuable prize ever offered on this variety, by the American Poultry Association—the grand $50 sweepstakes cup, for best cock, cockerel, four hens and four pullets in American class. Mention this paper in writing me. Also send for our 1901 circular, which is free.

**F. H. SHELLABARGER, West Liberty, Iowa, U. S. A.**

# Boyd's Black Minorcas

## Were Good Enough to Win

The creamy prizes at the great Cleveland, Ohio, show this season, including 1st and 2d cock, 1st pen and other seconds and thirds. Also won at the great Chicago Show, 2d cock, 1st and 2d hen, 1st and 2d cockerel, 1st and 2d pullet, 1st pen and specials for best cock, cockerel, hen and pullet and best display. These birds won in competition with crack birds of the East. Is this class of stock good enough for you? I can furnish you birds at reasonable prices. Eggs from winners only $3 per sitting. Eleven years a breeder of Black Minorcas.

**W. J. BOYD, Glenville, Ohio.**

## Thoroughbred Eggs

$1 per 13, straight. Pea-comb White Plymouth Rocks, Buff Rocks, Buff Wyandottes, Buff Leghorns and White Langshans. Send for my show winnings.

**GEO. STELZER, Oshkosh, Wis.**

**"No Cochins Like Hanchett's"**

## Magnificent Buff Cochins.

Such superb shape and color and soft massive feathering is very seldom seen. If you feel that you want the best possible quality, send for my elegant booklet. It's free!

**H. N. HANCHETT, Box A, Jackson, Mich.**

## Just a Word

**Regarding our**

**Buff Cochin Bantams!**

Last season they were fine; this year finer. We have never shown them that we did not win. Only one trio left that we will sell. Eggs shipped after March 1st. Extra choice, $2.00 for 13; others $1.50 for 13. Orders booked now.

**G. C. FLEGEL & SON, Westville, Ind.**

# For Heavens Sake

Don't order eggs by the crate, as I have only four pens of each, White Plymouth Rocks and White Wyandottes and only six cracker-jacks in each pen. Eggs $2 per sitting of 15.

**JOHN S. PARKER,**
**Tallmadge, O.**

Do not buy a Brooder or Incubator until you have investigated the "Shaub." Hot water heating and good ventilation. Prices the lowest. Send 4 cts. stamps for new illustrated catalogue.

# *Williams'*
# *White Wyandottes*

***Were the Hottest Babies in the Bunch.***

At the great Iudlsna Poultry Association Show, at New Albany, Ind., Dec. 24-29, 1900, in competition with 800 birds and in a class of 80 White Wyaudottes. With only 14 birds entered I won 1st and 3d cockerel, 1st and 2d hen, 2d pullet, 1st pen and six specials sud the highest scoring pen lu the show. My customers will get eggs from a pen headed by a 95-point male bird mated to females scoring 93¾, 94¼, 94¼, 95, 95, 95¾, 96, 96¼. If you want quality, write me.

***T. L. WILLIAMS, 218 Willard Ave., New Albany, Ind.***

# Mammoth Strain Light Brahmas,

**as bred by**

## H. T. ROGERS, Cainesville, Mo

**are Great Prize Winners.**

At the Cainsville, Mo., Show, against birds that have since won at St. Louis and other large shows, we made a remarkable record, which proves the Mammoth Strains are as good as the best. First cock, 1st hen, 1st, 2d and 3 cockerels, pullets and pens; also every special, including the grand prize over all. EGGS from our great St. Lonis, Kansas City and Cainsvillc, Mo., winners, $3 per 13; $5 per 26. Have mated two grand pens for early shipment—"Big Bng," a 94 point cock, with pullets 95 to 96½; Monarch cockerel, 94 1-2, with hens 93 1-2 to 95.

# Champion Buffs.

**Rocks, Wyandottes, Cochin Bantams.**

Won more firsts than all competitors combined. Eggs $1.50 from prize peus.

Also pedigreed Belgiau Hares. Seud for free circular.

# Miller's MILLHOOK FARM

# Special Prices on Eggs

***We want to become acquainted with every reader of this paper. We want you to know something of Millhook Farm, of the good poultry we breed, how careful we are in mating our breeding stock and the good care we give them so that they will produce good, strong, fertiie eggs that will hatch strong, healthy chicks.***

***The best way for us to get acquainted is for you to send us an order for eggs. If you want any eggs for hatching from the best pure-bred stock in this country, you can get them from us at less than one-half their actual value.***

## $1 per Sitting of 13 Eggs.

### CONDITIONS:

Yru must say that you saw our advertisement in this paper and your order must not be for less than two sittings and cash must be sent with the order.

**VARIETIES** { Barred P. Rocks, White P. Rocks, White Wyandottes, Brown Leghorns, Buff Leghorns, R. C. Br. Leghorns, Light Brahmas, Black Minorcas.

These are the only varieties that we will sell at $1 per sitting. For prices for other varieties and on fowls see our catalogue.

### OUR GUARANTEE:

We guarantee every egg bought from us to be true to name and that they will reach our customer in good condition and hatch good enough to satisiy any reasonahle person.

Eggs sold at $1 per sitting will he from the same stock from which we sell eggs at catalogue prices and from the same stock we breed from ourselves. Order direct from this advertisement and save unnecessary correspondence.

### OUR CATALOGUE.

Perhaps you do not know that we issue a very complete and handsome poultry catalogue: well, we do, and if you are interested in poultry, even just a little, you will surely want this hook. We will name just a few of the good things it contains: We show in colors B. P. Rocks, Buff Cochins, Black Langshans, S. C. Brown Leghorns, Black Minorcas and Buff P. Rocks. We tell you how to build poultry nouses and yards; how to prevent and cure all diseases of poultry; how to feed and care for your poultry from the time they are hatched until they are full grown. We illustrate and describe forty of the leading varieties of poultry, answer hundreds of important questions, give lowest prices of poultry and eggs and much other useful information. This book contains 84 pages and should be in the hands of all who are interested in poultry. Sent post-paid for 10 cents. Address

## Chicago Winners Again!

1901 finds us in the front. At the big show we won on Toulouse Geese all 1sts and 2ds; Bronze Turkeys, 1st cock, 3d cockerel; 5th pullet, 2d pen, 2d display. Buff Leghorns, 1st cock, 2d hen, 3d, 5th cockerels, 3d pullet, 1st pen, 1st display, and silver cup. Also 1st largest display, all varieties in show, and 2d display on water fowls. We have never failed to a first on each variety exhibited at Chicago for the last three years. We have several pens of fine Golden Wyandottes this season. Circular, giving winnings, prices on stock and eggs, free. Stamp for letter.

**B. F. HISLOP,**
**Iroquois Co. Milford, Ill.**

# HECK'S

## WHITE PLYMOUTH ROCKS

Are now laying eggs which will produce the winners at the shows next season, just as sure as they have done it in the past. We won more prizes at more large shows last season than any other breeder in America. Chicago, Toronto, Can., Cincinnati, Indianapolis, Memphis, Tenn., and New Albany, Ind., in the largest class ever shown in the State. No State Fairs included in this list. They were all winter shows and meetings of White Rock Club except one. **This makes Heck's White Rocks the leaders till someone equals the records.** You can now get eggs from my choicest matings at $5.00 per 15. Birds scoring from 95 to 96½. You get the same kind of eggs that produce winners for me.

**FRANK HECK, box 12 New Albany, Ind.**

Sec'y. and Treas. American White Plymouth Rock Club.

# HEADQUARTERS

**for High Scoring**

# BARRED PLY. ROCKS.

Indianapolis, Dec. 1899—1st and 2d cocks, 94½, 94; 1st hen, 94; 1st cockerel, 94; pen, 187⅝. Jan. 1899—all firsts but one. At Indianapolis, Dec. 1900—1st cock, 1st and 2d hen, 1st cockerel, 3d pullet and 1st pen.

I have many fine birds to select from. All from the above high scoring birds. Breeders or show birds for sale. Prices reasonable. Write for price list. Mention A. P. J.

I am now shipping eggs from my very best birds at $3 per sitting. You can depend upon them to produce winners.

***DO YOU KNOW***

# *Scott Deaner?*

If not you had better get acquainted with him and his prices for poultry and eggs for **1901.**

## Please Read Carefully.

The prices quoted for stock and eggs are as low as I can afford to make them and send you birds and eggs from first-class thoroughbred stock. Any breeder who offers to sell at a less price must either furnish you with inferior stock and eggs or lose money. I have birds in my yards that are hard to duplicate for quality. They are premium winners. I showed at Rockford, Ill., (F. H. Shallabarger, judge,) 24 birds and received 17 firsts, 4 seconds and 3 thirds. At Freeport, Ill., I showed 30 birds and received 25 firsts and 5 seconds. My guarantee on eggs are 7 chicks from each sitting or duplicate same at half price. I replace broken eggs free of charge.

### Can You Ask for Anything Better Than This?

You may order of different varieties if you wish to make up one, two or three sittings. Order direct from this ad and get what you want at prices that cannot be puplicated for the quality of the stock. **Remember I guarantee everything I ship and refund the money if not exactly as represented.** I have bred fancy poultry for thirty years, and will send a score card with each bird if desired.

**Mating and Scoring Birds a Specialty. Terms within Reach of All.**

# Egg Farms *and* Egg Farming.

**By Henry M. Ladd, Proprietor Crescent Farms, Cleveland, Ohio.**

AT the present time we have reached in this country the most active period in the whole history of the poultry industry. Never has there been such widespread interest, never so many able journals devoted exclusively to the interests of the poultry world, never such an immense output of such enormous value as now. Figures are uninteresting and we are familiar with the tables perhaps, but they show conclusively that the poultry business, conducted as it is today, is one of the largest and most profitable industries known in our country. It demands brains and capital, and Americans have both, and investing these they made it pay large and handsome profits. More than ever in this country, where dollars count, the poultry "fad" is taking on a practical aspect. "How much is there in it for me?" becomes the absorbing question with many in these days. This naturally leads them to consider the egg-farming branch of the industry, for here in the eggs that the hen lays through the year you may find the foundation, the corner stone, the bed rock of the poultry business as a business. Without joking, the egg is a stable article. It is in the market to stay, because people will have eggs the year round, whatever they may cost. Good market eggs bring an income at all seasons of the year. Undoubtedly the egg business is the best paying part of the whole industry in the long run. It means a steady income, a sure income, and one obtained with comparative ease. No wonder that egg farms are springing up all over the country. I am in correspondence at the present time with many who are just starting in the business and who have sought my advice and help. Some are cautiously starting in on a small scale. Others are building plants to produce hundreds of thousands of eggs to help supply the constant demand in our larger cities where prices are especially good. It is to help all such that this article is written.

The first question to arise is how and where shall we get our laying stock, and what breed shall it be? The question of breed is a debatable one. The answers might be many and various if all the breeders were allowed to speak at once. Each has his best layers and probably they are for him though they may not be for me. On Crescent Farm we have a comparison school. Here, side by side, under exactly similar conditions, are White Leghorns, Brown Leghorns, White Wyandottes, Barred Rocks, Buff Rocks, Black Minorcas and Buff Cochins. These, omitting the last are supposed to be the principal champion laying breeds. Now, taking all things into consideration, amount of food consumed, the effect of cold weather, ability to stand housing and the egg yield for the entire yield, the preference stands in about the following order: White Leghorns, White Wyandottes, Buff Rocks, Brown Leghorns, Barred Rocks, Black Minorcas and Buff Cochins. It is generally admitted without any question that the White Leghorn is the great egg producer both for size, quality, weight and number of eggs. It is not, however, generally known that, unlike other breeds, the nearer the type the White Leghorn is bred the better layer it becomes. It takes great care to breed good layers. They must come of bred-to-lay stock. They must be hatched out early enough, but not too early. They must be strong and vigorous from having farm range when young and growing. Many mistakes are made. For example, people going into the business think that they will buy as many eggs as necessary and hatch out their own fall and winter layers. They wait till the season is pretty well advanced and then think they can hatch out just what they will need for fall and winter when eggs are scarce and prices are high. They wake up about the first of May and go to hatching. Fall comes along. In October the pullets look as if they were just about to lay, but they don't, they simply keep on eating. You hope on into November. They have not laid yet, but they look like it, and keep on eating, and this they will do into January, and you blame the pullets and condemn the whole business. When eggs begin to drop in price your pullets think it is time to lay. You look at the feed bills and say, "It don't pay." "Egg farming is not what it used to be." Of course it don't pay that way. You did not start right. Starting right is the key to success. When fall comes and the would-be egg farmer realizes that he cannot induce his pullets to lay because they were not hatched out early enough, in sheer desperation he looks around to find someone who will stock him up with fall layers, but they are all in the same boat, or if they have fall layers they are too precious to sell. I know of only one firm that makes a specialty of stocking up egg farms with early hatched fall and winter layers of the very best bred-to-lay and properly fed-to-lay stock at reasonable wholesale figures.

Having obtained your laying stock the next thing is to persuade it to lay. The right food, enough of it, but not too much of it, plentiful exercise, fresh air, pure water, warm but not heated houses, plenty of room, no crowding and the hen will do the rest.

Non-fertilized eggs are the best for market. A non-fertilized egg contains no germ of life and therefore cannot decay. If left a long time it will merely dry out a little. But eggs should be sent to market put up in neat boxes, marked "Special," and guaranteeing absolute freshness. Any little specks of dirt or stains should be wiped off with a wet cloth soon after the eggs are gathered. Cared for in this way eggs will bring a fancy price in any market. Will it pay? Indeed it will. It will pay better than almost any other business that you can enter.

## Eggs and Their Uses as Foods.

Farmers' bulletin No. 28, issued by the U. S. Department of Agriculture, Washington, D. C., is now ready for distribution. It treats of eggs and their uses as food and will prove of interest to all poultrymen and all persons who desire to know something of this common article of diet. It has chapters upon the use of eggs, description and composition, flavor, digestibility, marketing and preserving, dessicated eggs, egg powders, egg substitutes, possible danger from eating eggs, importance and growth of the egg industry, etc. It also gives a list of the farmers' bulletins available for distribution, among which are numbers 41, fowls; care and feeding, 51; standard varieties of chickens and ducks and geese, 64. Our readers can obtain copies of these bulletines free by addressing Hon. Jas. Wilson, Secretary of Agriculture, Washington, D. C. They contain much valuable information and should be read by all poultrymen.

# Mr. Wooden Replies to Mr. Curtis.

The writer's article in your March issue seems to have brought out some thought and consideration on the part of, presumably friend Curtis, of the Reliable, which is given utterance in the April number of that paper.

Were it not for the fact that he fails to comprehend the meaning of my remarks in the March JOURNAL I would congratulate myself that he was with me in thought and would say nothing.

I have no issue to take with his article except in so far as it charges me with painting the standard bred poulty business black. I did not nor have I ever claimed that there was any more disreputable work in the poultry business than in any other business, but what I did claim, and what he practically admits, is that there is no way of restraining the evil tendencies that do exist.

That they exist he will scarcely deny. It does not necessarily follow that all is corrupt because some evil practices are permitted, but such as do exist should not be permitted to rest without earnest effort to eliminate them.

He cites the Quincy Soldiers' Home and states that the inmates should not be thought a "drunken lot" because 10 per cent of them squander their pensions in drink, which is all true. But, Friend Curtis, would not the institution be subject to severe criticism by the 90 per cent of respectability if it made no effort to stop the 10 per cent of drunkenness? If the roystering action of the minority encroached upon the rights of the majority, should not some decided effort be made to restrict them?

We of the American Poultry Association know that some evils exist and are practiced in the business. All breeders and exhibitors having experience in the show room will admit it. And now, as Mr. Curtis puts it, "What about it?"

There is this about it. If the American Poultry Association does not now, when the time is right and opportune, take some steps toward placing the business upon a better plane toward eliminating the petty disrepute that attaches to many shows, then it is time that it was buried, and an organization created that will keep abreast of the times and be a credit to the industry.

As he states, it is a very large undertaking and is certainly no boy's job. And it is also true that too much should not be attempted, but rather put matters in the way of evolving into something practical and elastic enough to meet the needs of the institution and restrictive enough to insure effort for improvement. But because it is no "boy's job" should we hesitate?

Because we are afflicted with disease which requires energy, time and patience to cure, should we be indifferent and submit to its ravages?

Because it requires skillful manipulation to finance any organization sufficiently strong to protect itself, should we abandon the effort? Most assuredly not. We all know that there is much attending poultry exhibitions that should be held in disrepute. It may have tainted but a small percentage, yet abuses exist and if possible should be eliminated. The task of correction may be a heavy load, yet should be cheerfully taken up and carried by the fanciers of the country. Present a practical plan and they will.

As to plan, it must be the consensus of opinion of the entire fancy. No one mind can evolve it from the vague and shadowy ideas so far brought out.

For my own part, I can see one essential necessary to success, and that promises difficulty. That is making it an object for individual exhibitors, judges and associations to become constituents of the American Poultry Association.

When that is done financing will be an easy matter. When that is done there will be no lack of membership and no hesitancy on the part of either individuals or associations to pay tribute to the national association. At present there is no object in joining the A. P. A., no advantages or privileges gained. If it depended upon annual dues from its members for life and support, with its present ineffectiveness, it would not have membership enough to form a drill squad.

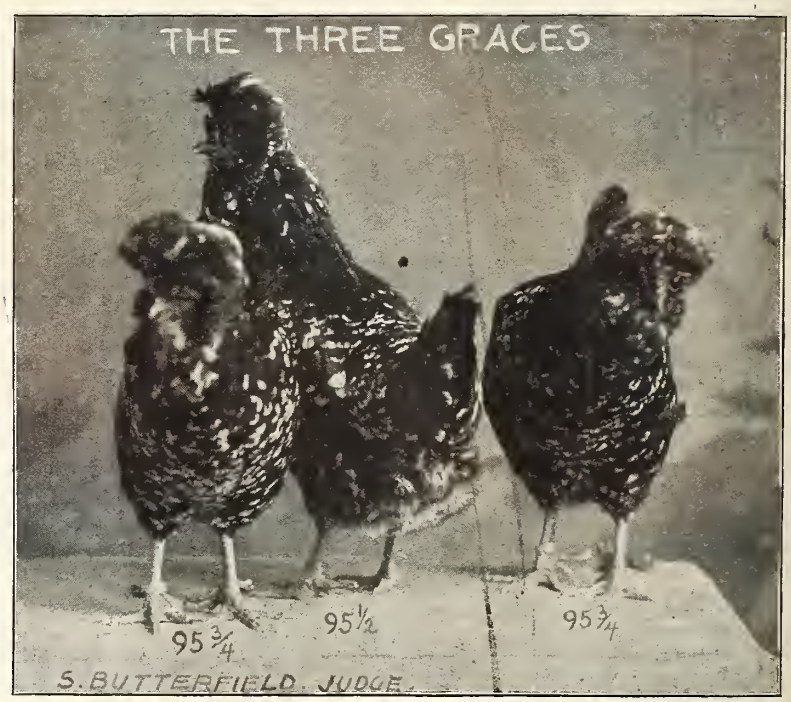
Its present constitution permits of local associations becoming constituent members, and how many has it? Let the association put itself in shape where it can protect individuals and local associations by suitable regulations which it can enforce and they will freely pay yearly tribute. If the national association can assure local constituent associations that they will be protected from competition in dates, etc., that judges must stand by contracts made with them, that individual exhibitors will be restrained from practising wrong and fraud, that the record of such shows shall be made a part of the record of the national association, etc., will it not induce association membership and support? If judges can be assured that the local association will be compelled to live up to its contracts, and that association judges will be preferred, will it not induce judge membership?

If the individual is assured of protection against fraud and imposition, will it not induce individual membership? And with such support will it be difficult to finance such an organization? I think not.

However, Mr. Curtis says that we would be "amenable for damages" if we falsely accuse, etc., and for this reason we should hesitate to undertake this responsibility of guarding and protecting individuals and associations against encroachment on the part of those evilly inclined. But the association need not become accusers in the strict sense of the word, and instead should be arbiters or judges over difficulties arising and upon all charges brought, to pass judgment through its proper boards or committees either national, territorial or state, based upon evidence and positive proof brought before it. Under no circumstances should the national association be placed where it must indorse action of this magnitude taken by local associations. Let it protect itself by adjudicating all differences, passing upon all charges and inflicting all penalties based upon actual and positive proof. Such authority should not be reposed in local associations where prejudice or temporary excitement might govern.

With such safeguards thrown around itself as could be done the American Poultry Association should no more hesitate to assume these responsibilities than Mr. Curtis would to back up the claim made in the standing notice headed "Guaranteed Advertisers" always found on the editorial page of his paper.

However, I am glad to see that Friend Curtis appreciated the necessity for something being done, and that the time is opportune for action, and I firmly believe that when we have all had the time to give the matter that consideration which it deserves, we will not be seriously frightened at the magnitude of the scheme. As Mr. Curtis suggests, it may be possible to eliminate show room

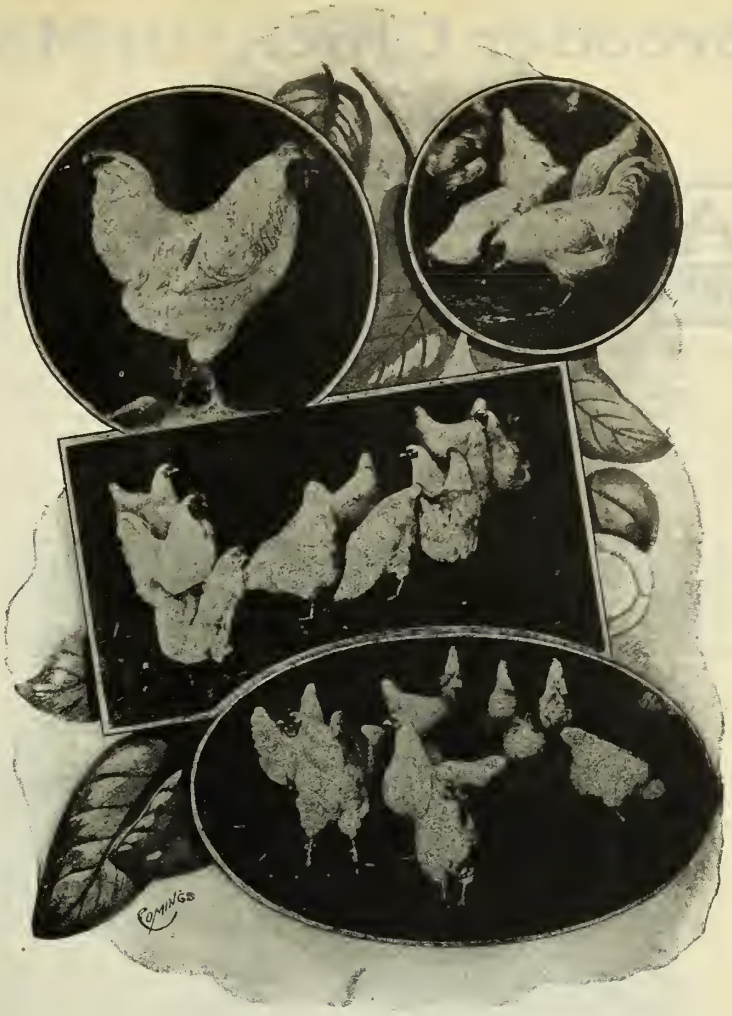


Houdans, property of J. H. and F. A. Waddell, Wauseon, Ohio. "Quality talks."

evils by educating the individual, but as large as the task of carrying out the suggestions of the resolution may be, it certainly would be a "boy's job" in comparison with the moral suasion necessary to bring reform through work upon individuals. There is one thing, however, of which I am firmly convinced, and that it that we will find it necessary to do more than approach this matter gradually and with timidity; in fact, we will have to get right into it good and hard to make the old A. P. A. the effective organization which it should be, and which the interests of the industry demand of it. Of this I am as firmly convinced as I am that when the time comes for action the editor of the Reliable will be found with his coat off aiding in carrying the responsibilities that will be necessary to plant poultry shows where they are never pointed at as instances of trickery or wrong.

## White Wyandottes; Past and Future.

No one who studies the poultry question either from a practical or fancy standpoint can help but acknowledge and be impressed with the rapid strides this most popular of varieties has made. We all appreciate that Barred Plymouth Rocks are or have been for many years the leading variety from both standpoints. Every farm nearly has them, and the poultry shows have always had as many barred rocks as any two other varieties shown, but alas what a difference now. Look at the three largest shows held last winter, New York, Boston and Chicago, and you will observe that the White Wyandottes outnumbered the barred rocks in each one, showing that this breed today stands at the head, not second in popularity but first, what is the cause? Simply this, there are no qualifications a barred rock possesses that a White Wyandotte does not, and in addition from a marketable standpoint there is a much larger per cent that can be sold for breeding purposes—in other words they are not so hard to breed true to color and shape. I am not condemning the Plymouth Rocks for outside the Wyandotte family they are in my judgment the finest all purpose breed known, but facts demonstrate that the public are fast becoming impressed with the superiority of the Wyandotte family. I first became imbued with the coming popularity of the White Wyandottes six years ago, and from that time have bred them exclusively, and never have I regretted my decision to discard all other breeds for this one. They are so gentle, so beautiful, such layers and in every way so useful that I am decidedly their champion. I am breeding them on the lines of attempting to overcome what few defects are known to this breed as nearly as possible. There are no birds used in my breeding pens that have a serious defect of any kind and if all breeders of this variety would be more careful of their matings there is no reason why this grand breed cannot be brought nearer to perfection than any breed has so far attained. The demand for this variety is increasing each year and the year 1901 has been the banner year. All over the world you can see the increasing demand for this variety. I shipped two trios to Australia this season and I am creditably informed they are fast becoming the leading fowl there as well as here. Raise *good*



Snap shots from Hickory Grove Place, Joliet, Ill., owned by F. C. Wilcox.

*White Wyandottes* and let the people know you have them by judicious advertising and fair treatment and you will have no difficulty is disposing of them, but poor ones, like other breeds, are less saleable. I inclose you some cuts of some of my breeding pens taken in their natural position and if any one, can upon careful study of their form and looks criticise this breed for looks, shape or useful qualifications then they would criticise anything.

*F. C. Wilcox.*

*Joliet, Ill.*

## The INCOMPETENT JUDGE

We have been very much interested in the articles written by some of our fellow fanciers upon the subject of judges and their qualifications. Some good, sound advice has been given, and we believe the time is at hand when the incompetent judge must step down. We have visited quite a number of leading poultry shows and have noticed in a few instances judges scoring birds which they knew very little about, and we have wondered how such work could be allowed to go on from year to year and not bring disaster to the fancy poultry business. We have only noticed this state of affairs when scoring Light Brahmas, as this is the only breed we profess to know anything about, having made them a special study for twelve years. We hear the same complaint all along the line, however, and feel sure there is ground for kicks. Brother fanciers, in united action something can be accomplished. Let the many specialty clubs take the matter up and through the American Poultry Association accomplish the desired end. We may be wrong, but in our judgment the show room where comparison judging is used is the ideal place for an incompetent judge. It is only a matter of look and leap, a kind of hit or miss "I'll light upon this" game, with no record left behind telling the story. We believe as some one has said before that "this method was hatched in the mind of an incompetent judge."

Many ideas have been expressed for the betterment of existing conditions. One which we favor is the passing of an examination and the issuing of a certificate to the person who passes a satisfactory examination before a committee appointed for this purpose by the American Poultry Association. Let us have immediate action in some way.

We see no reason why a bird scored by one judge could not be at once scored by another and receive the same score. Did we hear some one say this is asking too much. Well, perhaps we are, and we will modify it some by allowing a range of one point. Will this be sufficient? Did you say yes? But we have seen a range of four points. What then? "Incompetent judge."

# Brooder Chicks in May

By G. C. FLEGEL, Westville, Ind.

AS this is the month that many chicks will be put in brooders, we should look carefully to the sanitary condition of the brooder. The weather will be generally fine and the temperature undoubtedly warm and it is necessary that care be used in regulating the heat, as the brooder will be too warm for the chicks. On many days the heat can in all probability be turned off entirely through the middle of the day, as the chicks will be out of the brooder on the ground, and right here I wish to say, don't make the mistake of keeping the chicks confined to the brooder; let them out; let them be on the ground all they want. This is one of the best cures of leg weakness I know of. I have seen chicks that could not stand owing to confinement to the brooder, that in six hours after being on the ground could straighten up and walk fairly well and in two days were so thoroughly strengthened that a stranger could not tell they ever had leg weakness.

Let them out on the ground at all times; they will seldom stay out until they become chilled, as they soon learn the way to the brooder, where it is warm.

This is the month when extreme care must be taken not to overcrowd the chicks. It can be easily done, and overcrowding is the prime cause of the great mortality of brooder raised chicks. Never under any circumstances put more than fifty chicks in what is commonly rated a 100-chick brooder. They will not thrive, and those which do survive will not be the fine, strong, active, finely developed fowls they should be, and if but thirty-five young chicks are placed in the brooder, there will be no difficulty in raising all or nearly all to maturity, and there will be the satisfaction of knowing that they are fowls that will give returns in a substantial manner to repay the cost of raising.

Feed is quite a consideration in this connection. Never feed more than the chicks will pick up clean. It is an expensive idea to leave feed by the chicks continually, as there is more or less waste, and then the liability of the mash (if any is fed) souring is very great, and this means disaster to the hopes of raising brooder chicks. Be sure to change the water in the runs or brooders often so as to keep good, pure and fresh water before them at all times and the same with small grit. These are a few of the necessities connected with successful raising of brooder chicks.

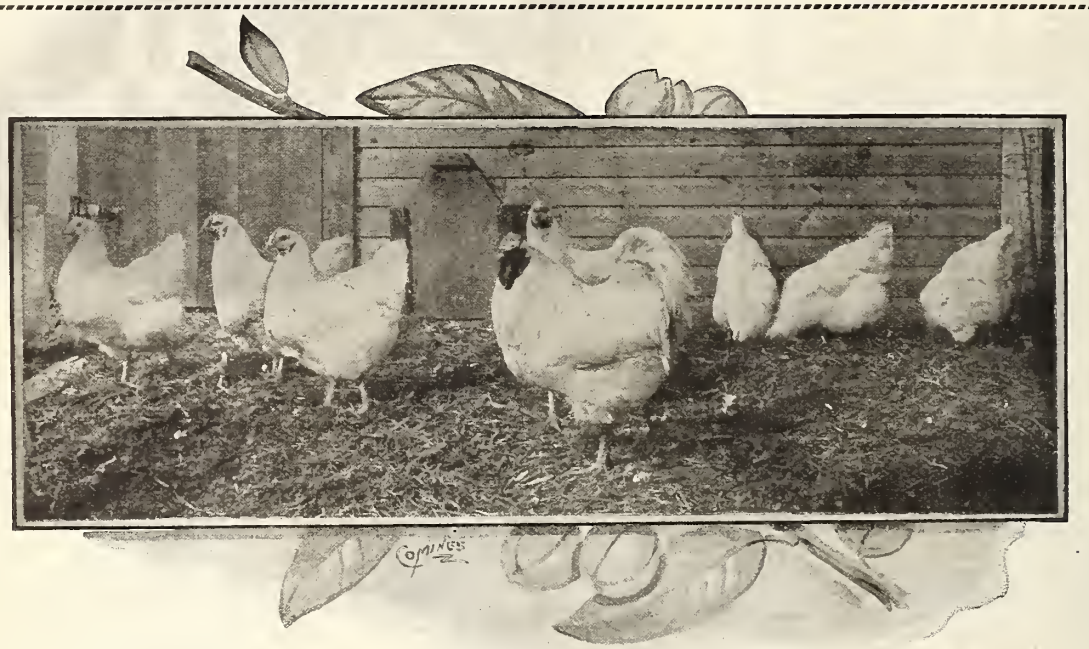
It is said that cleanliness is next to Godliness. This applies most forcibly in respect to the brooders. Don't let them go for a week or more without cleaning them out, but give them a cleaning every other day at least, and every morning is much better, and above all don't be afraid of getting them *too clean*—it can't be done. The chicks appreciate a clean brooder and show their appreciation by the health and rapid growth of the flock. It is a fact that filth in brooders induces and aggravates disease.

It is seldom that a sick or droopy chick is seen in or about a brooder if the following conditions are observed. Do not overcrowd; feed what they will pick up clean at each meal; keep plenty of fresh water and grit before them at all times and DO keep the brooder CLEAN. If these essentials are followed out it will be seldom that the chicks will be found ailing and bowel trouble will be the exception rather than the rule. In fact it will be found that if properly cared for a greater per cent of chicks can be raised to maturity in brooders than under hens.

Some poultry men seem to think that all that is necessary to do to raise chicks in brooders is to keep the lamp full and burning, feed them three or four times a day and then let them care for themselves. This is the greatest mistake a person can make. Don't get the idea into your head that there is no necessity for work after the chicks have been placed in the brooder, because there is, and this work must be done, too. I do not mean by this that a brooder requires more attention than does the hen and her brood, because it does not, but it does require a certain amount of care that must be given it or we might as well quit. Besides being cleaned regularly, the brooder should be moved to clean ground at least once a week, as by so doing the chicks are given fresh, clean, healthy earth to scratch and work in, thus promoting growth and health to the greatest degree.

It is wrong to get the idea into one's head that there is not much work connected with poultry raising, because there is work, and while it is not of the heavy, tiresome kind, yet there is work and plenty of it, and it must be done if one wishes to make a success of the business. While this may be discouraging to some, there is no use in beating about the bush. A person might as well know first as last that the work is to be done and then do it.

Those who give their brooders and the chicks hovered in them the closest attention are the persons who will have the greatest amount of success and realize the largest profit and greatest satisfaction from the knowledge that his



Gen. Alex and Mates. Owned by F. C. Wilcox, Joliet, Ill.

flock is as near perfection as is possible for him to get them.

I want to impress on the minds of those who are using brooders for the first time this season these facts once again. Don't overcrowd, feed judiciously, and keep the brooders clean.

## The Best Hatching Season

**By H. B. Geer.**

Years ago,, when I used to buy a good many eggs for hatching in the north and east, I was imbued with that old fogy idea that still clings to some—that May hatched chickens were inferior to those hatched earlier in the season. Hence, I used to place my orders in March, with instructions to ship as early as possible; that I wanted April hatched chickens. One man that I distinctly remember—a breeder at Watervliet, Mich., wrote me in reply that they still had winter up up there; his chickens were all housed, and that he could not guarantee his eggs to hatch satisfactorily so early in the season. I told him to hold the order and to ship when he thought I would get best results from the eggs. He did so. The eggs were set the latter part of April, and I got the best batch I ever had from shipped eggs, and raised every one of the chickens, too.

On two or three other occasions I bought eggs from a leading breeder of White Leghorns in New York state, and urged early shipment, and in each case I was advised to wait until later before the eggs should be shipped. But I wanted the eggs, and so they were forwarded against the judgment of the shipper; and with indifferent hatches, too.

So, after a time, I came to know by experience that for a sure hatch and a thrifty, quick growing chicken, the May sitter and the May chicken were the surest.

May is the natural hatching month of the birds and the wild fowl. They nest and hatch after the trees have leafed out, and the surface of the earth has been warmed up generally by the sun's genial rays; and the insect life awakened as well. Without the latter the mother bird could not provide food for her young; therefore, animated by natural instincts, she awaits the call of nature before nesting. She knows that the leafless trees and the barren, brown earth would afford her no subsistence for her young.

Coop the hen with her May hatched brood out in the open, where the chickens may range about at their will; but, with the mother hen and her protective coop near at hand, and then be assured that they will thrive and grow more rapidly, and mature fully as early as those of earlier hatching.

*Nashville, Tenn.*

Mr. H. L. Nelson, 39 Potomac avenue, Chicago, changes his ad this month and calls special attention to his S. C. Brown Leghorns, which have won in strong competition. He is one of those breeders who believe that liberal treatment of customers is one of the surest and quickest ways to build up a large trade and he gives more than value received by selling eggs from his high grade birds at one dollar per setting. He also breeds Barred Rocks of exceptional merit.

## Standard Weights Preferable.

**By W. R. Pollock, New London, Conn.**

I

As I was one of the members who favored that "White Rocks" be judged according to the Standard at the New York meeting of the "American White Rock Club," perhaps a few words in regard to the position taken by me at that time will not be amiss.

I claim that when the judge applies the Standard he should apply it to all parts of the bird. If the Standard says nine and one-half pounds for cock and seven and one-half pounds for hen, all other parts of the bird being equal, should not the bird that was nearest the standard weight win over the bird that is three or four pounds overweight? Is it fair to the exhibitor who follows the Standard to turn down his bird when the only reason for so doing is that the winning bird is larger and has exceeded the rule by which the bird is judged? The resolution offered at New York was to correct a fault. If a bird under weight is practically disqualified, why not the over-weight be controlled to a certain extent? The resolution passed at New York allowed a liberal latitude in excess of standard weight.

Now, a few words in regard to the shape of the bird. In breeding the birds so large you are getting away from the Plymouth Rock shape, as was plainly demonstrated by the many large birds that were shown at New York; some of them, in fact, most of the ten-pound females, being as heavily cushioned as a Cochin, and it was conceded by all the breeders at the New York meting, that birds bred to such large size were bred to the limit in weight, and that the established standard weight was a great deal nearer the average weight of Plymouth Rocks. "White Rocks" bred to the Standard will not have little narrow bodies or high Leghorn tails.

The argument advanced in regard to the large size birds is that their commercial value is increased because when selling a bird more pounds are disposed of. That may hold good in some localities, but it would not go in the east. Here the first question the marketman asks is: "How old are they?" And the next, "What weight will they dress?" When informed the weight will be eight or nine pounds, he refuses them. They are too large. You can sell ten birds here that will dress five pounds where you can sell one that will dress eight, and if you are obliged to dispose of the large birds you must take less than market price. Large poultry of all descriptions is not readily sold. I was asked last winter to sell some turkeys for a friend in New York state. The first sale was one hundred turkeys to weigh from seven to twelve pounds and only ten to weigh from fifteen pounds upward. The consumer always desires the medium size fowl.

Single Comb Brown Leghorn cock, "Julius Caesar I.," owned by A. D. Coleman, Belding, Michigan. He heads Mr. Coleman's yard No. 1, mated for cockerels.

As the egg production of a hen enters into the commercial side of the question it was conceded by each exhibitor of White Rocks at New York that, taken as a whole, the females that were standard weight would produce more eggs than the females that were greatly in excess of standard weight. The larger the bird, the less active and the smaller the egg production. The bird will lay a larger egg, but eggs sell by the dozen and not by the pound. Let me give a little sketch of my experience in breeding "White Rocks." I have been breeding the "White Rock" for ten years. I will admit it is difficult to bring young birds to standard weight for early fall shows unless the birds were hatched in February or the first of March. If hatched in April from a large mating, you can get a bird up to weight, quite often; but that is all; it is an ungainly looking fowl and only partially developed. Cock birds weighing thirteen pounds and hens weighing ten or eleven pounds never produce such good results as are obtained

from birds nearer the standard weight. This seems to be the universal experience of large breeders of Rocks in my locality. Briefly let me say, that the competition between exhibitors is so keen and so many good birds are shown in exhibits that the "weight" question enters largely into the awarding of the prizes and we claim—

*First.*—It is not fair to the fancier to allow that the overweight be the dominating factor in deciding the awards at our exhibits.

*Second.*—These large birds are "White Rocks" in name only and not in shape. The fine lines of the bird are lost in the large angles it develops.

*Third.*—It is not a normal bird but an abnormal development.

*Fourth.*—It is not as salable as a smaller bird.

*Fifth.*—The number of eggs produced by the female will not be as large as that of the bird nearer the standard weight.

*Sixth.*—It is deceiving the public by allowing them to assume that all "White Rocks" are of that size and build.

The above are six reasons in favor of adhering to the present Standard. Unless some better argument is advanced than that the excessive overweight overshadows all the other good qualities the bird possesses, I shall still contend that the present Standard is all right.

Just a word in regard to the "funeral" Mr. Fishel predicts. As far as the action taken by the breeders at New York is concerned, he need not purchase the crape for the obsequies this year. We believe in progression in the right way and are up to date sufficiently to realize that the overweight specimen is a step in the wrong direction, and will not acknowledge that White Cochins with featherless legs are White Rocks. Not in this Twentieth Century.

All AMERICAN POULTRY JOURNAL readers interested in Light Brahmas and Light Brahma Bantams are urged to send to Geo. W. Hillson, Amenia, N. Y., for his new illustrated catalogue.

# Success With Turkeys.

*By S. B. Johnston, Boggstown, Ind.*

THOUSANDS of poults are hatched this month all over the land and the important part of it is in starting them right. They should not be fed at all for 24 to 36 hours after hatching but the first thing to set before them is some fine grit to pick at. If the weather is not too damp when they are hatched and if you have plenty of range take the hen and poults away from the house giving the hen from 15 to 18 of the youngsters to mother in the early spring, and 20 or more later. Look after them daily with only a little feeding at morning and night to keep them tame and so they will not stray away. They will usually grow faster and larger than those that are raised and fed with other poultry around the yard.

Too many poults are fed to death, that is they will be fed five and six times a day around the house, which is all right if you have the range, but one should be very careful and use good judgment and feed pure feed and feed regularly the same hour each day. Turkeys that are fed to death are starved one day and gorged the next. One should be very careful and never neglect feeding his poults when they are depending on regular hours for feeding.

Poults are very sensible and will watch for you at the hour for feeding and if you fail to appear they are disappointed and the neglect seriously affects them. Many times whole broods have died on account of lack of food at the proper time. We should also be very careful to watch for lice, as they are a great enemy to poults.

By careful watching and using lice remedies for prevention and cure and lice ointment on head and under wings you can keep the lice away until the poults are large enough to take care of themselves and run at large. By that time they can keep themselves rid of lice. Also be very careful to keep them dry, as dampness is very fatal to young poults. The food for our poults is very simple, as we use millet seed, scraps from the table, also oat meal, which makes a very fine feed, giving them a change to soft feed such as corn bread soaked in sweet milk pressed dry before feeding, and clabber cheese made as you would for table use. Feed these articles alternately so they will not tire of one kind of food and as early as possible in life get the young poults to eating cracked corn, then you have no trouble in raising nice large birds.

## NOTICE OF TRANSFER.

This is to certify that I have sold to Mr. W. A. Greene, of New Albany, Ind., the first prize White Plymouth Rock hen at Cincinnati, 1900. This bird is one of the best females brought out at the shows last season and as a breeder cannot be excelled. She is in Mr. Greene's best breeding pen and is a valuable addition to his own high grade winners. There can be no doubt about the good results his egg customers will get from the eggs he is now shipping.

*Frank Heck.*

*New Albany, Ind.*

## Confessions of a Reformed Hen-Raiser.

(Address of W. C. Calkins, Esq., before Galesburg Poultry Association.)

Mr. President, Ladies and Gentlemen: Among this gathering of representative men, who have devoted many hustling, tbinking years to the worthy industry of farming, there are doubtless many who have made a success as henologists. Among such I feel strangely out of place. It was not permitted that I should sit among you as a listener and absorb rather tban radiate wisdom on the subjects you have assembled to discuss. It was not permitted that I should be left alone with my sorrow and allow a bitter chicken experience to remain locked up in the safe deposit vault of my inner consciousness. But, on the contrary, your committee, with a lack of sympathy which I never expected in those who call themselves my friends, insisted tbat my experience in raisiing poultry was too valuable to keep from a waiting world.

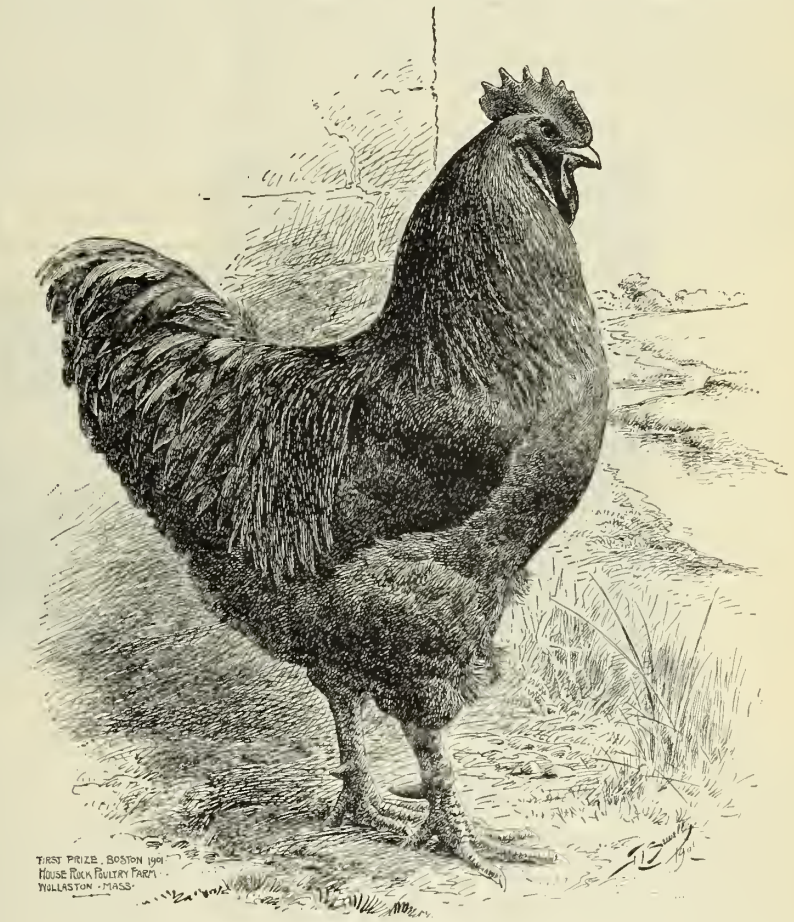
Not long ago a man named Erastus Wyman wrote a book entitled, "How to Succeed in Business." Tbe book was just published and placed on sale when its author failed for $2,000,000. It does not necessarily follow that this unfortunate incident detracted from the value of the book. People decided that if they read it carefully and then pursued a course directly opposite from that outlined by Erastus, tbey stood a rare chance of being successful. From this point of view my remarks may have a two-fold value to those of you who contemplate making a specialty of the chicken industry; they will either discourage you altogether or point out the only possible way to make a failure as complete as mine.

I woke up one morning with $4,000 and an idea. I still have the idea. It was this I learned from observation that the average hen could make a table d' hote dinner off a manure heap and lay an egg every working day. I also learned that this proud city of ours was entirely at tbe mercy of a few indifferent, non-union hens, distributed among the farmers round about, for its supply of fresh, sweet-scented eggs. Putting the two togetber (the money and tbe idea), I thought I saw a chance to promote an industry which would rival John D. Rockefeller's oil plant when it came to a matter of declaring dividends. It was evident that there was nothing to do but collect a large, choice company of fowls, give them a happy home, and then lean back in my bounteous office chair and softly murmur, "Lay on, McDuff," or wbatever their various names happened to be.

I, therefore, purchased a tract of rolling prairie. It was covered with a heavy growth of green, blue grass, shaded in spots by stately elms and flowering catalpas, and irrigated by a sparkling, babbling brooklet. It was a spot that would make a hen's life one long dream of happiness. It was a resort that would bave coaxed eggs out of the most barren prospects. It was here I built a chicken house of such mammoth proportions tha' it resembled a snowshed on the Norther Pacific. It was built on the most im proved plan of architecture. I gathered my ideas from personal visits to all the poultry farms in the country that were worth while, and every time I visited a new one I came home and changed my plans. There was an entire suite of rooms for every particular grade of chickenkind. Tbere were drawing rooms for the aristocratic and hospitals for the feeble. Tbere was a souvenir building for the Plymouth Rocks; there were temples for tbe Brahmas, improved footbaths for the White Leghorns and china closets for the Cochin Chinas. I hired a small boy to do the scratching for them, so they might sleep during the early morning hours. I built a stable for my horse and delivery wagon, sunk a well, fitted up an office and bought a burglar-proof safe in which to keep the eggs pending a rise in price. Then I began to look around for tenants. This was difficult. At that time all hens looked alike to me. I was compelled to take the seller's word as to their pedigree and habits. I have since learned that hens, as a rule, do not always carry out the agreements of their former owners.

After getting into touch with every man in Illinois who had a hen he was willing to part with, I secured enough to open up for business. The first roll call showed 375 present. Statistics show tbat one energetic hen will lay one egg a day, on an average. I did not have an average around the place, so I substituted a good, soft, well upholstered nest for each one of the 375. In a short time, through the courtesy of a dozen haughty roosters which I introduced among those present, and with the help of two steam-heated incubators, I swelled the total number to 1,260. Then I felt that my troubles were at an end. I had spent enough money to supply the town with eggs for years at Easter prices. I had purchased everything from sachet powder for the prevention of lice to ground bone for aiding their digestion. I bought drinking fountains, hovers, footbaths, steam heaters and egg cases. I naturally supposed that it was all over but putting the income in the bank. I was hugging the delusion. It soon developed into a proposition of stupendous proportions. My health began to fail and my placid brow, on which my earlier years of struggle had left no mark, became as corrugated as a washboard.

I decided to secure a manager for my plant, one who knew tbe hen business, and give myself a needed vacation. I employed a man who came to me well recommended—by himself. He claimed he had made the chicken business a life study; that he was on speaking terms with every hen in Knox county; that he knew every ill that chicken flesh is heir to; knew all their little troubles, their faults and their accomplishments. When I thought of all he said he knew, I wondered how I got him so cheap. As soon as he entered the place he became a universal favorite. Day after day the hens grew more fond of him. Tbey would eat from his hand, climb upon his knee and permit him to shampoo them and manicure their toenails. I turned the whole business over to him and went away on a two months' vacation, thinking that the next hen census would show a remarkable increase, and tbat the absolute control of the egg market of the world would be in my grasp. But I



Rhode Island Red, first prize Boston, 1901. Owned and bred by the House Rock Poultry Farm, Wollaston, Mass.

reckoned without my host, also without my manager. When I returned to the scene of my labors, bringing with me the latest style of cash register to figure up the profits, I found out of 1,260 happy, well-contented hens only 27 were gathered to welcome me, and some of them did not seem particularly glad to see me. The attendance reminded me of a Galesburg Sunday-school right after the scholars had their Christmas tree. I was never able to find out to my entire satisfaction just where the rest of those hens were. If any of them had been guilty of an egg in my absence there was no evidence of it. Doubtless some were visiting their neighbors, others had married and moved away, but my manager assured me that the great majority had passed into the dim-hazy unknown. It was evident that there was not a hen family of all that little community but mourned some dear departed. What I had fondly hoped to rear was robust, able, ambitious, conscientious hens, who, as soon as their education was completed, would voluntarily start out in the cold world with their mother's blessing and scratch for themselves. Instead, through the efforts of my manager, I had raised a lot of pampered pullets who were too languid to scratch, too blase to chase butterflies, who would not eat a ladybug unless it had been dressed and garnished, who considered it bad form to lay eggs, and demanded worms right off the ice.

Here we see an analogy of human life. Many men have pondered over the fact that a hard-working laborer of the submerged classes, in the face of adversity, will rear a large, thrifty family, while the multi-millionaire is not able to bring up in luxury a single child. In the same way consider the hen. She will pick up a seemingly precarious living in a cinder pile and the neighbor's garden plot, will cross the streets in front of trolley cars, run the gauntlet of cats, dogs, coons and other midnight prowlers, and live to become a great-great-grandmother. But just take that same identical hen, shield her from the world's rough hands, give her a nest of velvet and rosewood, feed her on Pratt's Pre-digested Pellets for Pullets, water her from a carbonated drinking fountain, take her for a walk each day along some sheltered promenade, put her in bed each night and awaken her with an alarm clock—and does she reward you for all this loving care? No; on the contrary, she ceases to be a producer, and the only reason that she does not become a social parasite is because she becomes a corpse.

Somewhere on some arch, tablet, monument, or other enduring memorial someone inscribed this portentous thought:

"Of all sad words of tongue or pen,
The saddest are these: Don't trust a hen."—*Agricultural Advertising.*

## Cure for Bowel Trouble in Chicks.

*Editor American Poultry Journal.*

DEAR SIR: In response to your recent request for an article from me on the subject of bowel trouble in chicks will say that this is a question that has puzzled many a fancier and breeder, your humble servant among the hundred and perhaps one with almost as many remedies. This trouble, as we all know, begins very early in the life of the chick, and is therefore harder to handle than it might otherwise be; the main causes are improper brooding and feeding. We might say a great many things of benefit on that part of the subject, but brevity is what you want, and so we will give you in a few words our experience on this part of the subject.

We have cured very bad cases in chicks three to seven or ten days' old with the following and the best remedy we have ever known or tried:

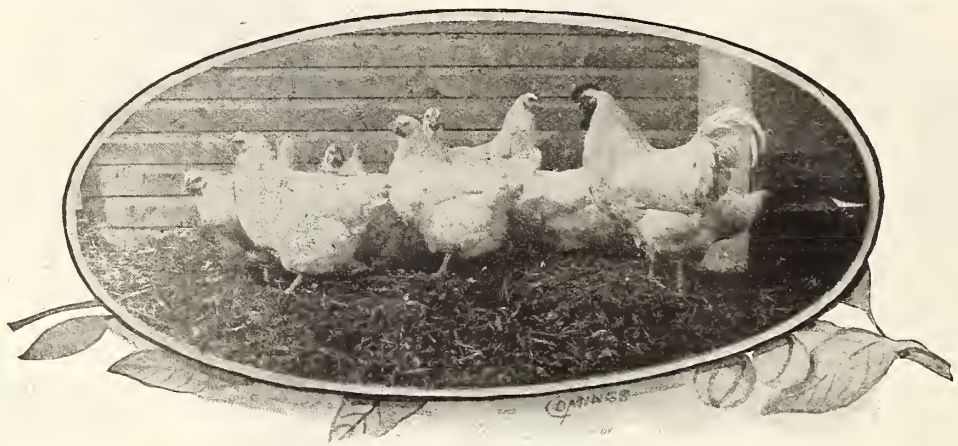
Recipe—Take 2 dr. rhubard, 2 dr. soda, 2 dr. peppermint plant, 2 dr. pulverized cinnamon, 1 pt. boiling water.

Strain and add granulated sugar enough to make syrup. Then add ½ gill French brandy. Bottle and keep well corked.

We use two teaspoonsful to one pint sweet milk. Give it by inverting a cup in a very shallow pan, with only a half-inch space to drink from.

If the remedy is used in time we believe it will cure in from twelve to eighteen hours. *Wm. F. Coats.*

*Old Homestead Poultry Farm, Columbus, Ind.*



F. C. Wilcox's White Wyandottes, Joliet, Ill.

## Objections to Barefoot Brahmas.

*Editor American Poultry Journal.*

DEAR SIR: I notice an article on Barefot Brahmas by A. M. Stocking in your April issue, and I wish to here take exception to some of his remarks. Firstly, he says that the feathers on the legs of the Brahma are objectionable, because of the filth that they acumulate in the pens and houses. I have yet to find a Brahma that is an unsightly one because of this objection, and I endeavor to obtain as many leg and toe feathers as I can possibly get. Why do my birds not get so dirty—because I keep everything clean about them. Secondly, he states they are objectionable as a market fowl and present an unsightly appearance when dressed. This I have not found to be the ease, as I have seen nearly as many Brahmas dressed as any bare leg breed and have yet to find this objection. Thirdly, he says that the leg and toe feathers do not add to the beauty of the Brahma. In my opinion they do, if bred on them, as the Standard calls for. What is a Brahma without these feathers? They are simply culls, or may possibly be called Columbian Wyandottes, which breed I have a snap shot of, taken from a poultry journal some years ago, therefore, Mr. Stocking, this breed was found then and was found wanting, as I never hear of it any more, which is good reason that it did not take. If you desire to perpetuate the bird of your choice, you have a perfect right to do so, but don't call them Barefoot Brahmas, for a Brahma without feathers on its legs and toes is not a Brahma. The true Brahma is here to stay..

My experience leads me to say that the Light Brahmas and Black Langshans are the fowls for all purposes. They are noble birds and are worthy of any amount of eare given them, but eaution is necessary in feeding, else they will become to fat for egg produetion. The Langshans are excellent layers and good table fowls, as also are the goood old Brahmas. I cannt pass an opinion between them, as both are very high up in my appreciation.

I would like to see a revival of these two noble breeds, there are others, I know, but these are my ehoice.

Wishing you a continued success with your paper, such as you have had the past year, as regards the make up of your journal and all will be well. You are at liberty to publish this article if you wish, as I am ready to baek up all I have said. I have no stock or eggs to sell. Yours very truly,

*Albert Cooper.*

*Sunny Slope Poultry Yards, Gwynbrook, Md.*

## THE HEN.

I AM the Hen,
And I'm all right, too.
It may be hard
For you
To realize my real worth,
For when
You see me
Scratching round the
yard.
Digging up the seed
Your wife planted.
In the flower bed,
And raising Old Ned
With the earth
In general, you fly
Off your base
And shy
A brick bat at me,
And get red in the face
And chase
Me 'round the lot.
You don't stop to think what
A hot
Proposition I am,
Nor what I've got
To my credit.
Why, man, don't you know
That I contrive
To lay 13 billion dozens
Of eggs
Every year I'm alive!
Thirteen billion dozens!
Let that soak
In your cranium a while,
And tell me then
If you think the hen
Is a joke.
Why, don't you know
That a lot of folks 'ud go
Dead broke
If it wasn't for me.
I don't want to crow
Nor hoost or
Push myself like a rooster,
But I'm here to say
That I'm not afraid
When it comes to eggs
Of anything that goes
On two legs.
I lay
The whole push in the shade.
You hear me cackle!
It's true
There are a few
Things I won't tackle,
But when it comes
To shelling out
The stuff that raises
The mortgage off the farm
I'm about
The only real warm
Thing there is.
And that's
The reason why
Your hats
Ought to come off
When I waddle by.

—*Agricultural Advertising*

## STANDARD BRED vs. PURE BRED AGAIN.

Permit me to commend your efforts in trying to induce poultrymen to be more precise in the use of their terms. W. R. Wooden says of the idea embodied in his resolution: "It means much to the American Poultry Association and means life or death to the fancy." While that is specific and goes right to the mark, and can not be emphasized too much, I think fanciers need to check up all along the line. As long as "do as you please, hit or miss," rules the poultry business there will be no substantial progress made; in fact this, one of the greatest of American industries, will lose what little recognition it now receives.

The use of the terms *thoroughbred, pure-bred* and *standard-bred* may seem of little importance, but as the question is up it is of enough importance that we should make an honest effort to get on the right side. The article by Mr. Geer in the last issue of the JOURNAL is a nice discussion of the subject, but at the same time it is not very helpful in the way of arriving at definite conclusions. In the first place the dictionary does not fully cover the matter under discussion, and in the next place "a musty and dusty dictionary" is not the highest authority. Specialists in any line will beat the dictionary every time. While the dictionary gives the usage (now or several years ago), they make the usage. For instance, terms applying to trotting horses are made by the trotting horse fraternity. Terms applying to Shorthorn cattle by the breeders and associations.

Now, the editor of the J URNAL has said: "Properly speaking, the word thoroughbred means only a running horse." We believe it is not putting the matter too strongly to say that this definition of the word is rigidly adhered to by all up-to-date agricultural colleges, associations and publications. It remains for poultrymen alone to use the name of a horse in describing their stock.

While the use of the terms pure-bred and standard-bred are certainly permissible and necessary at times, standard-bred being more expressive, their use is frequently unnecessary and is at times unwarranted. If we say White Wyandottes the fancier will understand at once that we mean a group which agrees in essential characteristics, a particular variety, and to establish a variety they have been bred "through to a purpose." To him it would not signify anything to add either of the terms under discussion, and to the uninitiated it would not make the conception much clearer. The horse." We believe it is not putting the matter too strongly to say that this definition of the word is rigidly adhered to by all up-to-date agricultural colleges, associations and publications. It fancy is in its incipency and our associations are in the formative period, but we think poultry terms should mean something and should be clear cut as they are in the better organized associations. When shepherds wish to designate a pure-bred registered Shropshire sheep they simply say a Shropshire, if it has a touch of other blood they call it a grade Shropshire; if it has not been registered they call it an unregistered Shropshire. Poultry terms should be just as expressive and should be used with just as much precision. When we say White Wyandotte it should mean a standard-bred specimen of that variety.

Summarizing then, we have first the term *thoroughbred*, which, if you *will* use it, may or may not mean the kind of fowl the fancier is putting his good money into; but it *is* the name of a breed of horses and is generally so used.

Secondly, the term pure-bred, which may mean any one of several different things.

Third, the term standard-bred, which means according to the standard of perfection, and you know exactly what it means every time you see it.

Put me down as favoring the use of the term *standard-bred* every time you want to designate the variety of fowl the fancier is putting so much money and time into.

## PHILADELPHIA MARKET REPORT.

PHILADELPHIA, PA., April 19, 1901.

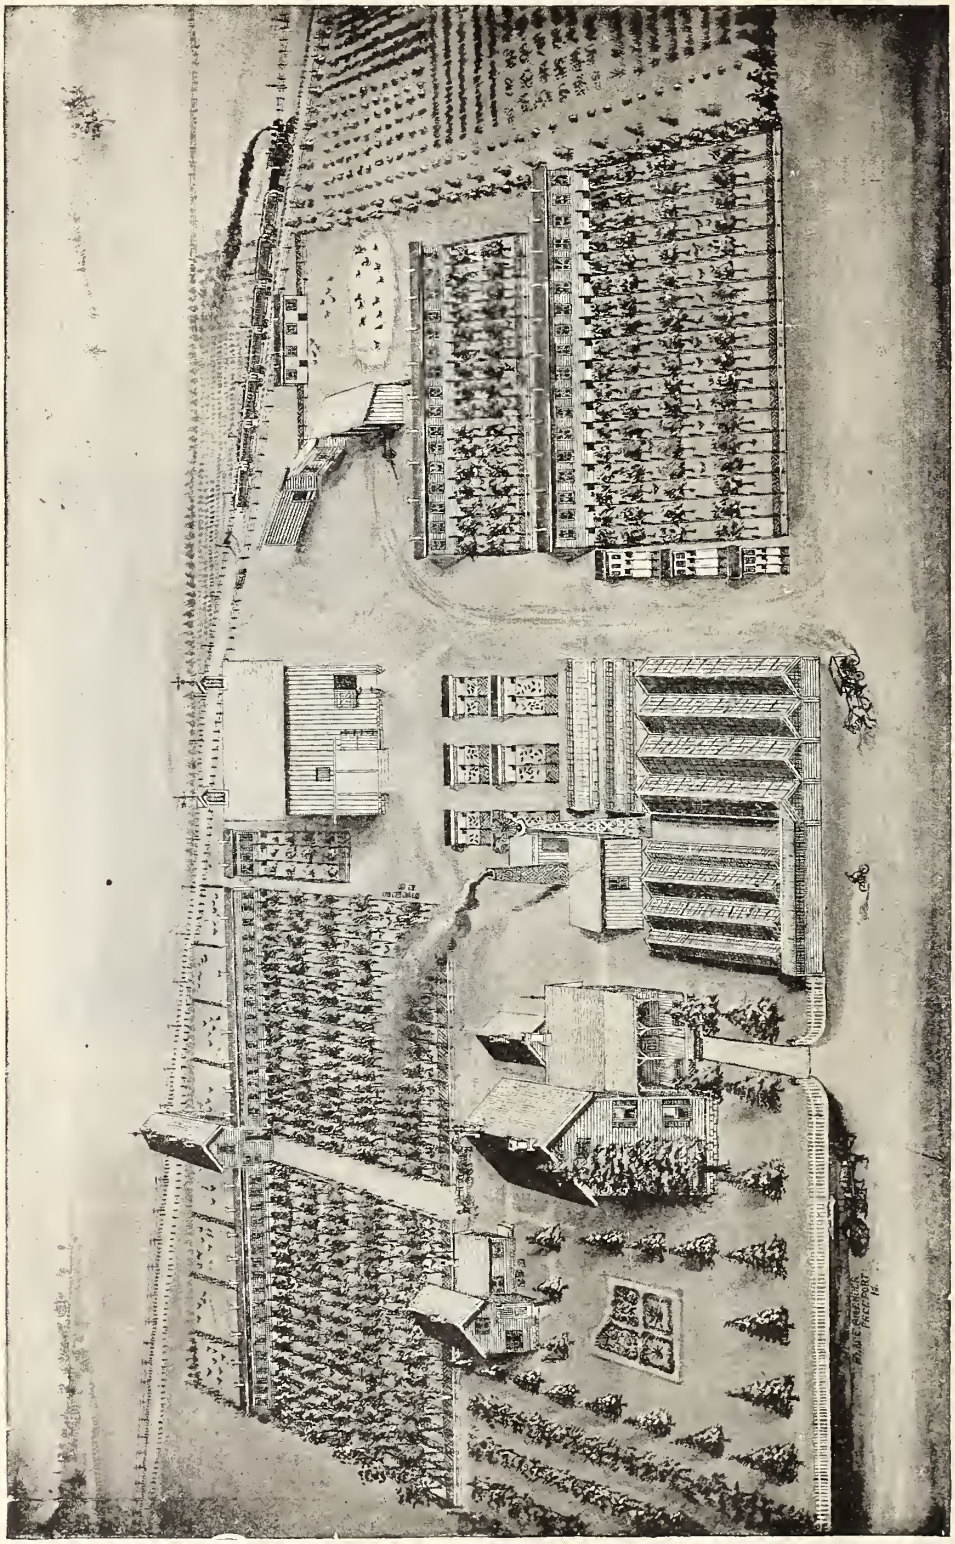
*Editor American Poultry Journal.*

GENTLEMEN: Following we present selling prices in our market: Fresh eggs, 13½ to 14c per doz.; live fowls, 10 to 11c; old roosters, 6½ to 7½c; ducks, 10 to 11c; winter chickens (3½ to 5 lbs. to the pair), 14 to 18c per lb.; broilers (2½ to 3 lbs. to the pair), 25 to 30c per lb.

*Dressed Poultry.*

Fowls, 9 to 10c; old roosters, 7c; roasting chickens, 11 to 13c; dry picked broilers and fryers, 15 to 30c per lb. as to quality. Yours truly,

*Philip Quigley*, 345 So. Front St.



Sunflower Poultry Farm of John Bauscher, Jr., Freeport, Ill.

# Bauscher's Sunflower Poultry Farm.

The accompanying illustrations are made from photographs taken on the famous "Sunflower Seed & Poultry Farm" at Freeport, Ill., owned and managed by the well known breeder and expert, Mr. John Bauscher, Jr. Much has been written concerning this model farm and its up-to-date methods, Mr. Bauscher having established a reputation as a breeder which has extended over this entire country and Canada as well as in many European countries where he has many valued customers.

The steady increase in Mr. Bauscher's business has made addition to his plant and facilities necessary from time to time, until today he owns what we believe to be one of the largest poultry houses in the country, it being 330 feet long and fully equipped throughout with every poultry appliance which adds to the health and well being of his fowls.

One of the principal reasons for the great success Mr. Bauscher has attained in the poultry world is the fact that he gives the closest personal attention to every detail of the business. While he has in every department competent men, fully able to carry on the business, he still keeps a watchful eye on it himself, and sees to it that every customer is fully satisfied.

The shipments from the "Sunflower" farm are very large—so large that the Illinois Central railway has laid a special side-track to Mr. Bauscher's shipping house. Mr. Bauscher writes, however, that he does not have an express office on his place and that no other poultry man does, either. He does not want to deceive the public in this respect. But representatives of the express companies call at his office every day and secure several hundred shipments (more than a great many offices handle in a week).

Some idea of the expense of conducting a farm like this may be gained from the fact that Mr. Bauscher spends in advertising alone nearly $5,000 a year in addition to putting out 85,000 of his large "Poultry Guides." This guide, one of the most practical of all poultry books, is sent to any address for 15c to pay expenses of mailing. If you haven't seen a copy send for one.

We can heartily commend Mr. Bauscher, his stock and his methods. He is doing the poultry business good service.

## BUFF LEGHORNS AS LAYERS.

(By Geo. F. Curtis, Fenton, Mich.)

Early in the nineties I suffered from my first severe attack of chicken fever, and though I have taken repeated treatments for the same, the disease seems to grow and become more firmly fixed as the years go by, until my physician (my wife) has given up in despair and pronounces my case incurable. My first symptoms were a sudden fancy for the Buff Cochin, followed almost immediately by a determination to possess some of my own; to that end I purchased a setting of eggs, paying the owner an exorbitant price, so it seemed to me, though if I remember rightly it was but 75 cents. In due time I was the proud (?) possessor of five sturdy chicks, four buff and one white; though why one should have been white I am to this day at a loss to know, and why there should have been "no feathers on the side of his legs in the place where the feathers ought to grow." However, with this as a start, I bred Buff Cochins for a number of years, purchasing eggs from some of the best strains in the country, and were I today in the poultry business for simon pure exhibition birds, I should still be breeding Buff Cochins. They were my first love, and I shall always take a deep interest in this grand breed; but though I had become a confirmed chicken crank in every sense of the word, I wanted something besides feathers, and that something was eggs, which I failed to get in any amount from my Cochins.

About this time I began to notice accounts of the wonderful laying powers of the Buff Leghorns, and being fully decided that nothing but buff would ever satisfy my fancy, I determined to try the Buff Leghorns; and so thoroughly satisfactory did they prove, that I am today as enthusiastic over my Leghorns as ever I was with Cochins.

The Buff Leghorn today sets the pace for the world in buff color; nothing can exceed the beauty of the soft lustrous buff of the female, and the more brilliant metallic buff of the male. Their bright red combs and pure white lobes bring out the rich golden buff of their plumage to the best advantage. Where can you see a more pleasing sight than a flock of these graceful fowls on a green lawn, the bright green making a most artistic background.

As for their practical qualities, they are most persistent layers of large, white eggs, and are the finest of table fowls. They are hardy and quick growers, and will thrive and grow fat on one-half the feed the larger breeds consume.

Now, a word for the Buff Leghorn Club. It is a well-known fact that the specialty clubs of the various breeds are doing much to push to the front and popularize their several breeds; but in order to do this they must have the support and co-operation of the breeders. For some time past but little has been heard from the Buff Leghorn Club; but with its new officers, we predict that in the year 1901 it will show new life and energy, and we hope every breeder of Buff Leghorns will join the same.

The above illustration is of Gold Mine, Jr., a Buff Rock cockerel, owned by F. C. Bailey, Reading, Mich. He is a fine specimen of the breed. He is large, has a nice bay eye, fine under color (was cut only ¼ point on back color). He is almost solid Buff throughout. Mated to him are twelve fine hens and pullets scoring 92¾ to 94 by Bridge & Russell. Mr. Bailey's last record: In a large class of fine individuals (Buff Rocks) at Saginaw, Mich., January, 1901, Tucker, judge, 1st pen; 1st, 2d and 3d hen and 2d cockerel with Gold Mine, Jr. Score, 94. A light effect appears in fluff color. It is the fault of the cut. His under color is truly fine. His sire was 2d cock at Chicago, 1901.

## INDIANS BUILD A RAILROAD.

Out in Wyoming the Burlington railroad is building a line down into the Big Horn Basin country, and the contractors succeeded in interesting a lot of Crow and Sioux Indians from the reservation near by and engaged a number of them on the grade. At first they were lined up each with scraper and a team of horses and at the word, with a yell, they started to race, that being the sport dearest to the Indian heart. But after the "boss" got them in line again and explained that they were there to "move dirt" and not to race horses things went more smoothly, and most of the bucks have developed into good workmen.

And so it happens, that within a few miles of the battlefield where Custer and his brave men of the Seventh Cavalry made their last stand in 1876, these warriors and sons of warriors, many of whom no doubt took part in the massacre, are peacefully taking up the white man's burden and "make 'em heap sweat."

## BREEDING POULTRY IN THE SOUTH.

[The above communication is in response to an inquiry from a Florida subscriber which we forwarded to Mr. Brown for answer. Much of the advice is worthy of the consideration of amateur breeders everywhere.—Editor.]

*Editor American Poultry Journal:*

In regard to the queries on southern poultry culture, we have been breeding pure bred poultry here in the south for fifteen years, and our plant being the first exclusive poultry plant in this state, had many ups and downs, and mostly downs and a hard road to travel. We did not at first expect to make poultry a business, as we were otherwise engaged, yet the fever was on us so for our own gratification and amusement built up and thoroughly equipped, as we supposed, a first class little poultry plant. Then our troubles began, for having no knowledge whatever about poultry nor any one to advise us we bought and paid a first class double price for all the experience we have gained, and even now in looking back we often wonder why, when disaster and failure were on every hand, we did not give up in disgust and quit, for truly no breeders ever fought the battles we have fought and lived to tell the tale. We made every mistake known in the poultry business and twice disease wiped out our entire stock, yet with all this we realized that poultry had been made a success, so were determined to succeed, and with a bull dog grip held on, and today have one of the largest, most complete and successful plants in all the southwest. Just here let us cite a few of our mistakes which are most common to all amateurs, which may be of some help, and at the same time answer the inquiries made you by our Florida friend. Go slow, for you must crawl before you walk. Don't undertake to handle every variety, for there are several, and it is simply impossible to handle them all successfully. We had the nerve to tackle forty-two varieties, and of course found it a losing game, so began to drop one by one, and our money also. Select one or two or a few varieties, such as Plymouth Rocks, Wyandottes, Brahmas or Leghorns, any of which we have found to be admirably adapted to the south. In fact the Barred Rock, Silver Wyandottes and Indian Games we have found to be the best all round combination money makers bred. Select those that suit your fancy best, watch and study them closely, building up and enlarging as circumstances justify. And in selecting your stock don't, above all things, buy poor, cheap, haphazard bred birds because they are cheap, for they will prove far the dearest in the end. Get the best, for quality is the basic principle on which all successful plants have been built. You may not realize nor appreciate the value of this great truth, yet it is far the cheapest and best to get only choice, first class line bred stock, even if only one pair, for cheap, poor stock is not only a waste of money, but much valuable time as well, for it is simply impossible to succeed with such. Start right or not at all. Build good, substantial houses and for the south use only open houses—we have experimented largely along this line—and while the close, tight houses are a necessity in the colder climate, yet in the south such are an abomination and fit only to breed lice, disease and disaster. For a small plant houses 8x16, with solid walls all around excepting the southern side, which should be open, will give much more satisfactory results. The above size will answer for two breeding pens 30x150 feet, with a center partition, and will accommodate from twelve to fifteen birds in each and give better results than to have all running at large in one flock. And for artificial incubation we heartily recommend the Reliable, which we have found after many years with a number of other various makes to be one of the best, most perfect, self-regulating machines on the market.

*G. W. Brown.*

*Camden, Ark.*

## GOLDEN WYANDOTTE CLUB.

At a meeting of Golden Wyandotte breeders, held Jan. 26, 1901, in the Collisuem, Chicago, the American Wyandotte Club was organized, with Robert E. Jones, Flat Rock, Ind., as president; W. A. Doolittle, Sabetha, Kan., as first vice president; J. S. Wray, London, Canada, scond vice president; A. L. Ringo, 333 Rookery building, Chicago, as secretary and treasurer, and Ira C. Kellar, Prospect, Ohio, as chairman of the executive committee.

The object of the club is as follows:

*First*—To bring the merits of the Golden Wyandotte fowl before the public and secure notice of the breed in the poultry journals and premium lists of poultry shows.

*Second*—To further in legitimate ways the interests of club members in breeding the Golden Wyandotte fowl.

*Third*—To encourage by united action the breeding and exhibition of Golden Wyandotte fowl in every state and territorial province and county on the American continent.

*It was resolved*, That the chairman of the executive committee select a vice president from the Golden Wyandotte breeders of each state, territory and province, and forward such names to the secretary for publication.

*It was resolved*, That each state vice president should have control of all matters concerning the shows of this fowl within his own state, and that a copy of all premium lists, with report of awards of each show held, be sent to the secretary, to be filed for future reference, aud awards concerning his fowls included in his annual report.

**Prairie State Incubators and Brooders**

Are used exclusively by the U. S. Government Experimental Farms.

**343 First Premiums.**

Largest catalogue published. Contains fifty color-plates. FREE. Ask for No. 2.

**Prairie State Inbubator Co.,**

**Homer City, Pa.**

The initiation fee was fixed at $1, the same to accompany the application for membership, per annum. The dues were fixed at $1, payable in advance.

*It was resolved*, That the American Golden Wyandotte Club offer in each state having twenty members, each having paid in advance dues for the current year, a special prize cup, fully engraved, at such show as a majority of the members may agree upon.

*It was resolved*, That Golden Wyandotte breeders make a united effort to present an unequaled exhibition of the fowl at the great shows of Buffalo Boston, Chicago and New York for the season of 1901-1902.

Application for membership and payment of dues can be made to the secretary and treasurer, A. L. Ringo, 333 Rookery building, Chicago, Ill. Copies of by-laws are ready for mailing.

**To make cows pay, use Sharples Cream Separators.** Book "Business Dairying" & Cat. 213 free. W. Chester, Pa

**Tilden's Barred Rocks.**

Bred large, with fine, even barring. They won 1st cock, 2d and 4th hen, 3d cockerel, 4th pen, in a class of 90 at the Galesburg Poultry Show, Nov. 26-30, 1900. Stock for sale in season. Eggs $2 per sitting of 15; three sittings $5.

**B. J. TILDEN, Galesburg, Ill.**

**BUFF ORPINGTONS.**

Winners of every first in Chicago, Toledo and Detroit but one. Circular free. J. M. Williams & Co., North Adams, Mich.

**CORNELL'S LEGHORNS, BUFF and WHITE, at New York and Boston.**

My Leghorns have won the highest honors of any strains of this variety at New York and Boston. They have been line bred for ten years and to day lead all other strains for breeding and exhibition purposes.

My Buffs have won 1st on breeding pen for five successive years at America's leading shows. 1st PRIZE BREEDING PEN AT MADISON SQUARE GARDEN IN 1897-1898-1899. 1900 AT BOSTON. 1901 AT NEW YORK. No other strain of Buff Leghorns has ever won 1st on breeding pen at the great New York show for so many years in succession.

At BOSTON 1900, they won four times as many 1st prizes as all competitors combined, and every special for which they competed, including the American Leghorn Club Cup for largest and best exhibit.

My White Leghorns have been well known winners for years. Besides my own great exhibit of Leghorns, my birds have won in the hands of customers, first prize during the past two seasons at New York, Boston, Philadelphia, and other leading shows throughout America.

Besides their show record, these birds are great layers. My matings are this year finer than ever, and I am now booking orders for eggs for hatching at $3.00 per 13; $5.00 per 26; $8.00 per 50; $15.00 per 100. Catalogue Free. Satisfaction guaranteed.

# Market Report.

CHICAGO, April 20, 1901.

*Editor American Poultry Journal.*

GENTLEMEN: For the next two months it will pay poultry breeders to attend to the marketing of their broilers, as during May and June they bring the best prices. There are the best broilers on the market this spring that there have been for several years and we look for the best prices. Broilers to bring a good price should weigh 1½ lbs. each during May, and during June from 2 to 2½ lbs. each and should be shipped alive.

The receipts of poultry of all kinds are light, market firm and higher. We are selling as follows:

Live Poultry: Chickens: Hens, 9½ to 10c; young roosters, without spurs, 9½ to 10c; old roosters, 5 to 6c; broilers, 1¼ lbs. each, $2.50 to $3.50 per doz., 1½ to 2 lbs. each, $4.00 to $5.50 per doz.; old ducks, 10 to 11c; geese, $4.00 to $10.00 per dozen according to size; turkeys, 7 to 9c; pigeons, $1.75 per doz.

From now on all poultry should be shipped alive as it is impossible to ship dressed stock without ice. Ship all poultry to arrive Tuesday, Wednesday, Thursday and Friday of each week with the exception of heavy hens, which should be shipped to arrive on Wednesday of each week.

Eggs are steady at 12c and we do not look for much difference in the egg market for the next month or so.

We see no reason for poultry breeders to sell to local dealers. They should ship direct to headquarters and get all there is in it. Local dealers do not handle goods without a profit. For the benefit of those who are not familiar with the manner of handling poultry for our market we have gotten out a booklet giving directions for making coops, preparing and shipping poultry so it will bring the highest market price, which we will be glad to send free to those asking for it. We will also furnish market reports and shipping tags.

For the next few weeks poultry will be confined in yards and will have no opportunity to run around and pick up gravel. For that reason all poultry breeders should keep a supply of mica crystal grit, crushed oyster shell, bone, meat, blood meal, etc., before the poultry as it will not do well on grain only.

They should also keep a sharp lookout for lice as more poultry die of lice than of cholera. If a goodly supply of mica crystal grit is kept within reach of the poultry and it is kept free from lice there will be no trouble with disease.

Sprague's Lice & Insect Killer is guaranteed to keep poultry free from lice and mites. Such confidence have we in it that we will warrant it to give entire satisfaction or refund the money. We will be glad to send our circulars and price lists free on application.

We hope to hear from your readers when we can be of service to them.

*Sprague Commission Co.,*
A. H. Sprague, President.

Fred E. Pile, Cleveland, Ohio, writes us that he is receiving egg orders from all sections of the country, and is doing a larger business in eggs than any previous year. This was to have been expected, as he won the lion's share of regular prizes at Cleveland and practically all of the specials, including the $100 John Zepp cup. Two weeks later at Chicago he won many of the best regular prizes and gold special for second best display.

# THE FANCIER IN THE POULTRY YARD

THOS. F. RIGG, Iowa Falls, Iowa.

We regret to announce that on account of the serious illness of Mr. Rigg he has been unable to send in his article for this number of A. P. J. He wishes us to state for the benefit of those who have written for special information on various matters that these will have his attention in time for next month.

## Chicks Must be Started Right to Make Winners.

THE shows are past for the season, and the breeder is reconciled to his fate; if he was victorious he does not hesitate to let the people know it; if he has failed no doubt his mind is made up as to the cause of his failure. So we go to work with renewed energies, trying to correct, if possible, the faulty places. The intelligent breeder studies well his pens, and right carefully does he support the weak places in either male or female by giving strength to that particular point, and day by day do we watch the results of the several matings. More quality is what we need and must have—quality against quantity all the time. I am in favor of large birds, but I believe there is a limit to all things. Many times (and this year not excepted) have I taken a choice pullet or hen and mated her to bring out some one point that I was desirous to obtain for the next season's breeders. True, there is quite a little labor in looking after so many hens. Still, past experience has taught me that it pays in the end. Better see to it if you have anything in your possession good enough to produce what you need rather than look to some one else for it.

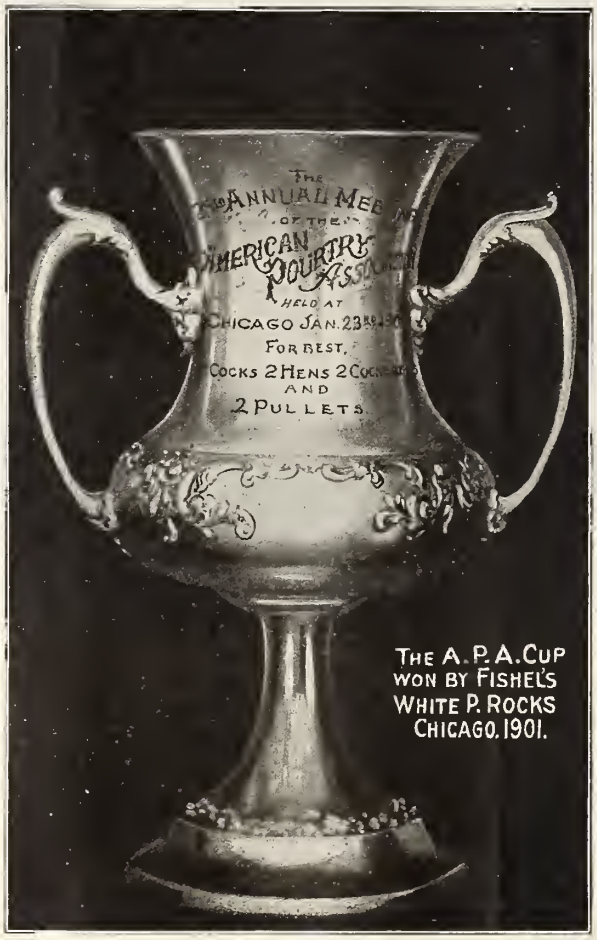
A successful poultry man must be a judge not only of the correct system of mating but he must know how to select strong, vigorous stock. A fowl that is afflicted with any malignant disease, such as roup, canker, cholera, consumption, etc., should be cast out entirely. I know it takes courage to kill a good bird, but we must do it if we will succeed. A bad case of indigestion often leaves a fowl unfit for service during the entire season.

Now that our pens are made up of strong, healthy stock, properly mated, we are ready for the season's work (as we are getting ready to go to the show). This is surely the opportune time to begin, and when biddy brings out the little chirper take care that we mould its destiny by the treatment it gets during the first few days of its existence, for countless thousands are consumed by haste. The old adage, that "Haste makes waste," holds doubly true in starting the chick on the road to fame.

Experience is our best teacher, and do not be persuaded that much food is required for the first few days. An infant will cry with pain when it is overfed, and likewise the wee chick suffers. How drawn and pinched they look, because they are in such pain; and then that wailing cry, how it grieves us to see them perish and know that the wrong we have done them is so very hard to undo.

I have a friend who seems to think warmth is the all-essential thing; just so they are kept warm, it matters not what we feed them. I prefer to think that dryness is one great requisite, together with a good, warm brooder for cover. The person to whom I just referred claims the atmosphere of the brooder house proper should register 90 degrees, using the hot water pipe system under hover. Consequently the chicks are hot-house plants, stunted and never a prize winner will we find in this set; but rather let us keep the wee ones for a few days under the hover, just opening the brooder long enough to feed them and see that there are no dead ones after three days we let them out into a glass run, where they can exereise and get warmth enough from the hot water tank in brooder (you will observe by this that I use the individual brooder). After one week we gradually give them a little airing each day, and unless the weather is very severe they will be able to go uncovered at the end of two weeks. I put my last brooder of chicks out on the main floor today and they are now twelve days old, strong and scratching and screaming for more to eat all the time. I now feed Spratt's Poultry Food in the morning, a little cracked wheat thrown in the chaff where they run. At noon I give different things, sometimes potatoes chopped fine, shepherd's sprouts chopped fine, dandelion lettuce; afternoon a little cracked corn in chaff, just enough to keep them scratching, and when I have milk I prepare a food for evening by boiling sweet milk, thickening it to a mush with equal parts of corn meal and middlings and while yet hot stir into this mixture dry bran until the whole is a crumbly mass, this is quite palatable and they grow rapidly fed in this way. You will observe that the milk serves to provide meat for the small chick, and I believe it is better for them until they begin to throw out their feathers. Another thing I wish to mention and that is the necessity of keeping brooders on coops scrupulously clean and thoroughly disinfected. This can be done cheaply and easily by dipping a cob in Minor's Fluid and place just inside the coop. A weak olution of the same serves as a lice extreminator and now that we have made a right start let us not think that our work is finished and that some fine morning of next winter we will wake up to find the place swarming with "prize winners" lest we are disappointed. I may begin here at another time and tell how we must work on to the end.

*Mrs. J. H. Orebaugh.*



American Poultry Association Cup, won by U. R. Fishel, Hope, Ind., at Chicago, 1901.

## A WOMAN ON SINGLE MATING.

I see that at the meeting of the Illinois State Poultry Association, held at Quincy last January, one of the speakers remarked that "even the farmer's wife can raise poultry." Why, of course she can, as well as the farmer can raise corn, and when the farmer's wife once becomes interested in pure bred poultry she will think about it, talk about it and want to read about it, and I say emphatically subscribe for the poultry journals. Right here I want to say, keep your journals.

The articles that do not interest you now are just the ones you will want later. When we first began to read the journals we were particularly interested in incubators and brooders and read everything we could find on the subject. As I said in October's AMERICAN POULTRY JOURNAL, we hatched the chickens all right, but raised very few. Then we brought out the back numbers of the poultry journals to find the reason.

We were convinced that our breeding stock lacked vitality and we decided (the girls and I) that we would have only one breed of fowls and that they must be Barred Plymouth Rocks. Now the advertising columns of the journals received our attention.

Our order sent off, we again brought out our journals, expecting to learn all about Barred Plymouth Rocks, but I have to confess that we are like the man we read about: "We don't know where we are at." It may seem presumptuous for one of my limited experience to express an opinion, but I should like to say how the matter appears to me, and if I am away wrong perhaps some of the successful ones may set me right.

Most of those whose writings I have seen and who enter into details are double mating advocates. Some of these say they do not think double mating right, and only practice it because it is the only way to produce both males and females that meet the requirements of the standard of perfection. Others say double mating is right because it is the only way by which both male and female can be produced that will meet the requirements of the Standard. It appears to me as if the framers of the standard of perfection had made up a description of a pair of beautiful birds and called them Barred Plymouth Rocks, and that the breeders of Barred Rocks have to make birds to suit this standard.

Now this is the way I understand it. To meet the requirements of the Standard, Mr. A. mates two pens of birds, one to produce cockerels and the other pullets. A number of pullets are taken from the one pen, a cockerel from the other, and at the poultry shows they receive highest awards as best breeding pen. Mr. A. takes them home and, to get cockerels for next year's shows, he mates his high-scoring male with females so dark that the farmer would laugh at them if he saw them in his wife's yard. To get next year's prize-taking pullets he will mate the females from his show pen with a male lighter than the Standard allows, but so handsome that they need not be ashamed to be seen with him anywhere. In short, there are two families not even related to each other, and if Mr. A. should breed that pen as shown at the fair the result would be as much a cross as though he had mated a Buff Rock male with his prize-winning females.

Just here it occurs to me that the standard gives one color description for Buff Rock male and another for female, and the same is true of the other buffs, as well as all the parti-colored breeds excepting Barred Rocks.

Now, in spite of all this, or maybe because of it all, we have decided to take our place in the ranks of the single mating advocates, and we are glad to see there are not a few who say that both high scoring male and female can be produced from one mating. We would be glad if some of the successful ones will tell us whether we may hope to succeed by the following method:

We will have one pair of high scoring birds from prize winners and breed in line by single mating pair. From this mating we hope to get high scoring birds, both male and female. Besides the prize winners (?) there will be dark females and light males.

Now here is a question I want answered. If from this mating we get one pullet, good in all Standard requirements, and another pullet the equal of the first in everything except color, she being dark with distinct barring, and we mate these pullets back to the sire, may we expect good results May we not reasonably expect Standard males from the dark female and Standard pullets from the light one? Can this properly be called single mating?

We are very anxious to succeed and doubtless there are other beginners who will be profited at the same time.

Published the first of each month by
GEO. G. BATES, Editor and Proprietor.

FRANK HECK, Associate Editor.

Subscription price 50 cents a year in advance.

When delivered by carrier in Chicago 60 cents a year in advance.

Payment for AMERICAN POULTRY JOURNAL, when sent by mail, should be made by money order, registered letter or stamps.

Write name and address plainly, and if JOURNAL does not come regularly and promptly, write us at once.

In requesting change of address be sure to give the old address as well as the new one. This is important.

Advertising rates will be furnished on application.

The reliability of new advertisers must be ascertained before an insertion of an ad in the columns of AMERICAN POULTRY JOURNAL can be made. This is a business matter, the justice of which is readily seen, as protection to the readers who answer advertisements.

Alway say when writing advertisers, that you saw it in the AMERICAN POULTRY JOURNAL.

All copy for advertising and manuscripts for publication should reach us not later than the 20th of the month preceding the date of issue.

## The Plymouth Rock World Keokuk, Iowa.

We have purchased the business and good will of the "Plymouth Rock World," published at Keokuk, Iowa, and devoted to the interests of Barred White and Buff Plymouth Rocks and their breeders. All contracts for advertising will be carried out by us and advertisers will have their cards inserted in A. P. J. till the expiration of contract. Subscribers will receive this journal each month for such time as they have paid to "Plymouth Rock World," and those who are already subsrcibers to A. P. J. will have their subscriptions exteuded. To both subscribers and advertisers we desire to state that we will at all times endeavor to give them such service as will justify a continuance of their patronage, and we are pleased to add them to the already large family of A. P. J. readers and advertisers. We are arranging to greatly enlarge our field in every way and new plans which are to be adopted from time to time will make AMERICAN POULTRY JOURNAL all that a representative publication of the kind should be and will make it of undisputed value and of undoubted service to every breeder of poultry in the land. The liberal and undivided support now being accorded the JOURNAL by a majority of poultrymen everywhere is evidence of still greater results in the future.

## He Wants a Change.

*Editor American Poultry Journal:*

Pardon my suggestion, but why not run in your paper a few Bantam, Polish, Hamburgs aand Game cuts for a change. This Plymouth Rock and Wyandotte steady diet by all the poultry press is getting awful tiresome. Give us a change. I believe your paper is the one to set the pace. Yours truly,

*W. H. B.*

The above letter from a subscriber no doubt voices the sentiment of many others. It reminds us of a similar one received recently accusing us of prejudice against the Dorkings. We wish to again disclaim any preference for any one or more varieties. Our endeavor is to procure as varied a lot of illustrations for each number as is possible. In looking over the last three numbers of A. P. J. we find that in the reading columns of February issue there are eleven different varieties of fowls represented. In March there were fifteen and in April sixteen. This is surely not a "Plymouth Rock and Wyandotte diet." We will admit, however, that a number of good breeds are sadly neglected in this respect and herein may be found food for thought by the breeders of those varieties. Why does not the poultry press present more illustrations of Bantams, Anconas, Andalusians, Dark Brahmas, Black, White and Partridge Cochins, Dorkings, Dominiques, Hamburgs, Javas, Polish, Black Spanish, and many others? As far as AMERICAN POULTRY JOURNAL is concerned it is up to the breeders of these varieties to answer, because we are always glad to publish illustrations for our advertisers free of charge and they alone are responsible for non-appearance of their favorites. The reason why there are more cuts of Plymouth Rocks and Wyandottes used is because there are more breeders of these varieties and the fowls are more popular. Why do these conditions exist? Let those interested answer.

## Poultry Journals at the Pan-American.

The superintendent of the live stock department of the Pan-American Exposition has arranged for the maintenance of a reading room where poultrymen will find publications of special interest to them. Copies of AMERICAN POULTRY JOURNAL will be found there not only during the time of the poultry exhibit, but from the opening to the close of the exposition, and all poultrymen are invited to look up AMERICAN POULTRY JOURNAL, which will contain items of special importauce during that time.

## Now is the Time.

We believe with Mr. W. R. Wooden, whose remarks appear elsewhere in this number, that now is the time for the American Poultry Association to rise to its opportunities and fill the position it should have occupied long ago. The interest in Standard bred poultry is rapidly increasing and this fact is so clearly evident that there is no chance for argument. This increasing interest should be fostered and further enlarged and in no other way can the greatest good be accomplished than by an active, well organized association working with this end in view. If it is true, and it is, that the breeders of horses, cattle, and even dogs, can maintain legislative bodies for the advancement of their interests and for controlling the exhibitions, and to some extent the transactions of those interested, it is idle to say that poultrymen canuot do likewise. What is needed is for the poultrymen to get together and do something. It is not for the lack of brains and energy that we have not long ago remedied the evil. It is simply negligence upon the part of those interested. The "petty disrepute" referred to also exists and we do not believe in trying to smooth it over and cover it up. The great rank and file of poultrymen know that this is one of the unpleasant parts of the business and they also know that there is rottenness in high places that needs to be suppressed. Why should we deny it? Are not the people engaged in rearing Standard bred poultry human, and is it not folly to presume that there is no necessity for laws which will bring wrongdoers to justice? We think that these circumstances are not out of the ordinary nor to be unexpected. This proposed reform is one of the utmost importance and we hope to see the matter thoroughly agitated and something tangible result therefrom.

## Premium Contest.

Those awarded prizes in the Premium Contest which closed April 19 were as follows:

| | | |
|---|---|---|
| 1st prize— | Jas. P. Behe, Pennsylvania | 117 |
| 2nd prize— | Eph. Bolin, Illinois | 61 |
| 3rd prize— | F. H. Towne, Vermont | 60 |
| 4th prize— | Wm. W. Bailey, Ohio | 51 |
| 5th prize— | J. N. Bowen, W. Virginia | 50 |
| 6th prize— | Calvin Ott, Illinois | 49 |
| 7th prize— | G. W. Warden, Michigan | 46 |
| 8th prize— | Aaron Homan, Ohio | 44 |
| 9th prize— | Walter Foote, Illinois | 40 |
| 10th prize— | Henry K. Southard, Ind. | 39 |

This was a very close contest. We thank all of you who have takeu part iu it and we know you will join hands with us in congratulating the winners.

Should we not hear from you inside of 10 days in regard to special premiums, we will renew your subscription according to the number you have sent in. We would like to have you continue taking subscriptions for us.

## A Little of Everything.

We have again opened a department devoted to "A Little of Everything," aud believe that our readers will find therein many valuable and timely suggestions upon seasonable subjects. These short items anticipate the questions arising in the minds of many breeders and the points brought out are covered in a brief, terse manner, easy of comprehension. A. P. J. advertisers and subscribers are at liberty to contribute to this department as often as they desire. Look over these items. You will probably find just the information you have been wanting. It is also probable that you can enlighten some fellow breeder upon some point, and we suggest that you send in an item now for the June number. Make it short. Write it upon a postal card.

Items of an advertising nature cannot be used. This department is for the sole purpose of instruction.

## Eggs $30 per Case.

Alaska Commercial Co.
Dawson, March 16, 1901.

*Geo. G. Bates, Esq.*

Dear Sir:—I received your favor of Feb. 5. Am much obliged to you for forwarding me a copy of your POULTRY JOURNAL, but unfortunately shall never receive it, it being against the rules to carry second class matter in the mails to this district during the winter months.

Fowls are not raised at present in the Yukon district; there are only four live chickens within a radius of 500 miles of this place, so you see the chance of getting subscriptions for your journal is very slim.

Small frozen chickens sell here for

from $2 to $3.50 each. They are brought here frozen in the fall.

Frozen eggs sell for $15 per case, and fresh eggs, or as near fresh as it is possible to get them, $30 per case.

I give you the above information because I infer you are not acquainted with this district; it is not impossible to raise poultry here, and I would be pleased to give you any information on the suhject you wish. Yours truly,

*John Young.*

The above letter is one of the many interesting ones received in our efforts to increase the suhscription list of A. P. J. This one will give our readers an idea of the conditions as they exist in the Yukon district as regards the poultry industry If, as our correspondent states, it is possihle to raise poultry in that territory, it seems strange that more people are not engaged in the husiness and that such prices should prevail. Three dollars and a half for chickens and $1 per dozen for eggs for eating purposes are rather stiff prices. If some enterprising poultryman can figure out how to get his market stock and eggs to the Yukon district at a reasonable cost over that of production, it would seem that his profits would rival those of the successful gold seekers.

## Changes in the Standard.

A new edition of the Standard will be ready in a few weeks, and it will contain all the changes made at the Chicago meeting of the American Poultry Association. To all who have purchased Standards of us during the past year we will be pleased to send an errata if they will make request for same. This errata gives the complete changes, including a full description of the new breed, the Partridge Wyandottes.

## What of the Future?

[The editorial in April number "Does Money Move the Poultry Press?" seems not to have been thoroughly understood by our correspondent, whose article drew out the statements and we give his reply below. The idea we wished to convey was that money did not influence the press in an inconsisteut or illegitimate manner, which is the impression one would gain from Mr. Taylor's assertion. With reference to what qualifications one should possess to offer intelligent criticism of the argument against excessive weight, we take the stand that he should be experienced in breeding birds to standard requirements and therefore be familiar with the conditions met with. There are several questions to be considered and results to be conclusively proven before the matter can be finally settled. Here are some of them. Is the demand for excessive weight a reasonable one? Is it possible to get excessive weight and conform strictly to the standard? Are the standard weights just what they should be? If so, why want overweight birds and if not, why not change the standard? If typical birds of excessive weight can be produced can they be raised in sufficient number that a breeder can make his business profitable with no demand for the lighter or standard weight birds? Will not the bird so much over standard weight lay fewer eggs as a rule and therefore overbalance by loss in egg production what is gained in meat production? Is not the mortality greater amongst the overweight specimens? There are other questions of an equally unsettled nature. The burden of Mr. Taylor's remarks, however, has to do with alleged changed conditions of the poultry business and it is to these that we desire to call the special attention of our readers. He is undoubtedly right in some of his conclusions and he presents them in a forcible and convincing manner. The future of the business is an interesting study to those engaged in it for the financial returns to be derived from it. Is the strict fancier losing his hold as far as dictating the size, shape and color of our fowls and is he being whipped into line by the commercial interests of the industry and forced to adapt himself to conditions which are not beneficial or justifiable? It seems that the inclination upon the part of some to yield to the demand for excessive weight is a step in that direction.—Editor.]

After reading the editorial in April issue, "Does Money Move the Poultry Press?" a fellow hreeder remarked: "Looks like the fluttering of a wounded bird." I cannot take that view of it. I consider it a fair, square and safe declaration to stand hy, and one that the JOURNAL adheres to. Besides it is a square admission that money does make the press go mostly one way, simply hecause that way is best paid for and what is there wrong in that? It may be the wrong thing is paying most and buying most, but the press is not to hlame for that. It is the conditions that are to blame, and it may be those conditions will change.

I agree with the editorial thus far, some "are not in position to offer intelligent criticism, because they are not familiar with the condition," and I extend the application in this way, some are not in position to receive intelligent criticism for the same reason—don't grasp conditions.

A good business man puts upon his shelves the goods that his trade demands, not those that please his personal fancy. He does not pass laws and do argument to convince his customers that he don't know what he wants.

Yet it seems some branches of the fancy admit that the demand is for a given size, and still propose to "discourage" this demand by law and argument. The argument is all right and will prevail if of merit. Unfortunately the law will fail for want of general sympathy.

The whole subject is bound up in the editorial suggestion of conditions. Those conditions are rapidly changing.

Time was when the commercial inportance of poultry products was very little considered, and an extra pound of flesh or an extra dozen of eggs was of no importance to the great mass of producers — the farmers — hecause the whole business was looked upon as an incident of no importance. Then the strictly fancy could do what they pleased with any kind of fowl and no one cared. No farmers bred pure hreed poultry, and no packing house sought their fat poultry, no cold storage their eggs, hut just how rapidly this condition is changing I doubt if any man has a conception commensurate with the facts. During the serious panic through which our country passed in the 90's every one took note that the poultry product was about the only thing that had not gone to the wall, and for the first time in history poultry took its place as an important product of the farm, and now the farmer is not only rapidly hecoming a producer of more and better poultry, but is getting known as a hreeder and a show follower, yes, a fancier, happily and strongly determined to hlend the beautiful and the useful, and, best of all, he is coming to be no insignificant customer of the fancier, who has such stock, as when all of it that is beautiful is sold for fancy prices, there is a good, substantial quality attached to that which is left. Conditions are changing. The fancier need not despair, nor will he go out of business or be one whit less successful, but he will be driven in line with the conditions.

Put all the law at the lower limit of your standard that you see fit, but leave the upper limit unrestricted save by the descretion of the judge, whose judgement in the hour thereof will about as surely reflect the needs and the puhlic demand of the day, as mortal man hath honest power to do.

This is the plan followed in other lines of live stock, why not with poultry? To do otherwise is to raise suspicion that you have failed in your stock, and are seeking to drag the demand down to its level instead of hringing your product up to the demand. Keep up with conditions.

**How Best To Set A Hen.**

**Hens Will Set**

And do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kiud of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

**Eggs Will Hatch**

When the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Uuder these couditions eggs from healthy birds hre usually well fertilized. When good eggs fail to hatch the trouble is often outside the eggs. Lambert's Death to Lice Powder never injnres the fertility of eggs for hatching, the sitter, or the little chickens should they hatch in a handful of it.

**Chicks Will Grow**

When started free from vermin and kept so from the shell up. If allowed to become lousy they lose streugth and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointmeut would save their lives.

**Death to Lice Remedies**

Death to Lice Powder for dusting layers and sitters—5 oz. sample, 10c postpaid; 48 oz., 50c; 100 oz., $1.00, from here or nearest agency to you by express. Death to Lice Ointment for head lice on children or chickens, also scaley shanks on fowls, 10c and 25c postpaid. Death to Lice Special, for making a liquid louse or mite killei and for mixing with the regular powder for fleas on dogs, moths, etc., 4 oz., 10c; 16 oz., 40c, by mail postpaid. Death to Lice Lice Liquid for spraying poultry houses, painting roosts, etc., (already prepared) 1 qt., 35c; 2 qts., 60c; 4 qts., $1.00, f. o. h. here. Book and "How Best to Set a Heu" sent free.

**D. J. LAMBERT, Box 308, Apponaug, R. I.**

**Pekin Ducks, White Wyandottes and White Plymouth Rocks,**

Winners at New York, Philadelphia, Boston, Hagerstown and smaller shows. Hens eggs, $2 for 13; $5 for 39; $12 for 100. Incuhator eggs, $8 for 100. Duck eggs, $2 for 12; $5 for 50; $8 for 100. A few eggs from prize winning pens of ducks and hens, $5 for 13; $8 for 36. Send for circular.

***POLLARD'S POULTRY FARM, So. Attleboro, Mass.***

***F. M. POLLARD.*** ***GEO. H. POLLARD.***

The article by Mr. Geer, following my own in the April issue, most happily displays the editor's conception of the fitness of things, and I thank him for putting an article that so well develops my suggestion, that professional men and men of leisure, men seeking recreation, have an honorable place in the fancy. I fully endorse all Mr. Geer says, and offer an amendment—simply, conditions are changing. The farmer is cutting a good deal larger figure than he did; he is coming slow, but he gets faster and is sure, and Mr. Fancier, Mr. Editor, if you would the farmer

Time was when the commercial should come nearer to you, just learn a trifle more to him. He will meet you half way.

Feather and fritter and lessen important features with bantams and silkies and frizzles all you please, but diminish nothing pertaining to those breeds of special commercial merit. Bow to the inevitable. The fancier is dealing with new conditions and the fancier of the past cannot be the fancier of the future.

Yet there will be fanciers and his shadow will never grow less.

The editor asks: "Without the Fancier Where Would the Business, as a Business, Be?" I will transform and compound this question. Without the fancier where would the poultry press be? Surely not more than a few hit or miss paragraphs in the semi-poultry columns of an agricultural journal.

And without the poultry press as it is where would the poultry business be? Certainly "with McGinty at the bottom of the sea."

In testimony thereof I renew my breeders' card in AMERICAN POULTRY JOURNAL. Though small, it pays well, and please fate, may it grow greater and pay faster. *J. E. Taylor,*

*Greenville, Mich.*

*Watertown, Wis., April 8th, 1901.*
*Gentlemen:—Of the 15 W. P. Rock eggs hatched 14 chicks; they are strong and healthy. Am very well pleased with result.*
*H. JANKE.*
Addressed to W. M. Pfennig, Jauesville, Wis. Ad elsewhere in this number.

**Wheeler's Barred Rocks are Winners**
At Greenville Show, Dec. 25-28, 1900, in a big class, I won 1st ckl., 1st pul., 1st hen, 2d, 3d ck. and 2d pen; also 2 specials. At Cedar Springs Show, Jan. 1-4, 1901, 1st, 2d ck., 1st, 2d, 3d hens, 1st, 2d, 3d ckls., 1st, 2d, 3d puls., 1st pen: also 4 specials. A few good bargains in ckls. and pullets with score cards from J. A. Tucker, judge. Eggs in season $2 per 15; $3.50 per 30. Illustrated circular free.
**E. W. WHEELER, Box 378, Cedar Springs, Mich.**

## THE SHOW ROOM AS AN EDUCATOR.

No argument is necessary to satisfy most every one at a Poultry Show that an exhibit of this kind is educational in its way, yet usually we find one person who cannot see it that way, and that is the fellow who never shows but always has just as good as the first prize winners—at home. No use trying to tell him anything; He has got "White Bramahs" that can reach up and eat corn off the top of a barrel. He has got "Cochin Chinas" as fine as any at the show, or "Speckled Dominickers" and "Silver Spangled Wyndotttes" that he raised from eggs that his uncle in Illinois sent him four years ago. I don't think he is a Misssourian for "we don't have to show him." Taking the show room as an educator I do not know that I can do better than recite some of my own experience. I commenced to show chickens at the St. Louis Fair in 1888. I entered a pair of Silver Wyandotte chicks—someone else had entered a pair; anyhow, there were just two pairs in competition, and I got second. No boy with a new pair of boots felt quite as important as I did. Next year I entered for Brooding Pen, old fowls and young chicks—about 16 birds. Some other parties had also entered a string so that there were about 50 birds in competition. When the awards were placed the judge went by my coops and put all the ribbons on the other displays. I did not get a ribbon. If there is anything that will take the conceit out of a person it is an experience like this. I do not remember, but my impression is that for about 24 hours I was in a quandary—whether to cuss the judge or the superintendent; give my competitors a piece of my mind or go to the Fair Association and tell them I would never show with them again. However, after another 24 hours I cooled down and I sneaked up to the coops containing the winners and just peeped at them. As no one shooed me away I straightened up and looked at them. The owner happened to come along and explained to me some of the good points of his birds, and also kindly called my attention to the feathers on the legs of some of my pullets, and nearly solid white ear lobes on one of my cockerels, and to round up with suggested that I buy a Standard. I carried a few "examples" home with me from that show to study at my leisure. There is one thing about an education under such circumstances and that is it is liable to be lasting. It taught me that if I would be successful in the poultry business I must go to school and learn. The show room is the school. We may attend a show and watch the judge cut a comb 1½, neck color 1, back color 1, shape 1½ and so on, but unless we have birds there in competition the lesson is not duly impressed on us. We have nothing at stake. On the other hand, if we exhibit, though our exhibit be ever so small, we have a direct interest in the results and for that reason the lesson will be likely to be more strongly impressed on us. The show room is also an educator in this respect; it brings out birds in competition. It will teach us that if we would succeed we must put our birds in show condition. Too often we hear the remark, "these birds are just as I picked them up and brought them in." Those who follow this rule will get left nearly every time, although they may have the best birds. The

White Wyandottes owned and bred by Chas. McClave, New London, O.

show room will teach us what our favorites should be in shape and markings. It will teach us that the comb should be so, the eye a certain color; the breast a little more full or the back a trifle shorter. It will teach us that to breed better birds than our competitors we must improve. It will teach us that the loss of a sickle feather because of too much white, or the pulling of a primary or a secondary because of too much black, will not help us any for the judge will he looking for those identical feathers, and if they are not there, will give the bird the benefit of the doubt by charging the absence of these feathers up to the owner. It will teach us that to succeed we must keep everlastingly at it, and it will teach us that the Golden Rule can be as appropriately applied in the poultry business as in any other: "Do unto others as you would have others do unto you."

*Henry Eteinmesch,*

*St. Louis, Mo.*

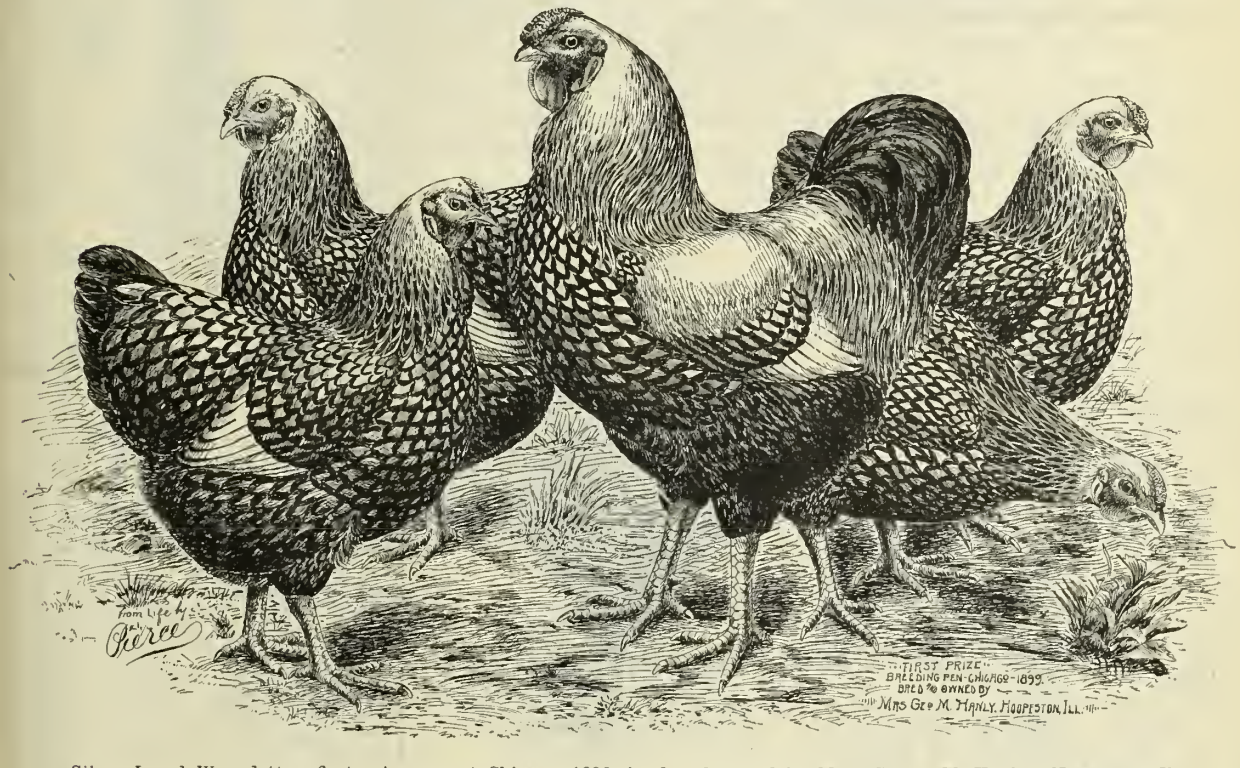
## OUR EXPERIENCE.

As usual, our chicken experience commenced with an acute attack of the chicken fever, which speedily became chronic, and has since been pronounced incurable. With all the confidence of a beginner, we purchased a flock of 150 beautiful (?) mongrels, which, like every farmer's fowl, either striped, barred or blotched, no matter whether red, white of blue, were called Plymouth Rocks. Throwing them together in a house 20x24, we succeeded in fattening, but not in obtaining eggs. Next the mysteries of the incubator held our attention, which brought, among other things, the poultry journals (thanks to luck). We learned our mistakes, and also that there is but one fowl —the Standard bred. Working on lines laid down in journals, we soon obtained 60 to 70 eggs a day, this, although not remarkable, stimulated us to greater things. Selling one-half the mongrels, we purchased thoroughbred eggs, paying the ridiculous price (so considered by friends) of $3 to $5 per setting.

Through luck and pluck we succeeded in raising twenty fowls out of about 100 eggs; selecting two trios as breeders, the rest, including the common hens, went to market as meat. By using the incubator, we succeeded in having the next fall 102 Standard bred, the same plan another season gave us five pens of fine breeders out of 365 fowls, the rest having been always sold as meat, a slow but sure way to breed up a flock. Passers by now liken our fowls to a snow drift (viewed from the road), as they roost in the fall on the ground, top of brooders and low branches of cherry trees; nothing could be more beautiful. As this sketch shows, our fowls are the descendents of two trios, line bred, yet not too closely inbred, the pens being kept separate and judiciously crossed, giving us a very uniform flock, which will breed satisfactorily.

*W. M. Pfennig.*

*Janesville, Wis.*



Silver Laced Wyandottes, first prize pen at Chicago, 1899, bred and owned by Mrs. George M. Hanley, Hoopeston, Ill.

## JOLIET WANTS THE ILL. STATE SHOW.

*Editor American Poultry Journal.*

DEAR SIR: The poultry breeders in and around Joliet are making extensive preparations for the next year's show, and in order to help them in this matter there is at the present time being constructed a building suitable for holding exhibitions of this kind, and one amply large enough to care for one of the largest shows in the country.

They would like very much to have the Illinois State Association meet with them this coming year, and situated as they are, the writer feels that it would be a good thing for the association to decide in favor of Joliet. The state show has never been held in the northern part of the state except at the time it was held in Chicago, and then it was considered more of a Chicago show than a state show.

The breeders in and around Joliet are qualified perfectly to take care of a meeting of this kind. There are good hotel accommodations and good shipping facilities, both in and out, as they are on the main line of three of the most important railroads in the state, and are closely connected with every important railroad in the west.

With such men as Fred Wilcox, William Webb, Humphrey Bros. and a number of other prominent breeders in and around Joliet, the state association may rest assured that the work will he done right if left in their hands. We trust the association will see its way clear to call the next meeting for Joliet.

Truly yours, *Theo. Hewes.*

Two bills touching the work of the Agricultural College and Experiment Station are before the people of the state of Illinois for consideration at the present session of the general assemhly:

1. One is prepared by the trustees of the university and contains two items referring to the agricultural huilding and the College of Agriculture.

2. The other is prepared jointly hy the several agricultural organizations of the state and provides for a live stock equipment for the college and for extending the work of the experiment station. This proposed legislation is in line with that which has made the Agricultural College and Experiment Station strong and useful in other states. We hope to see it favorahly acted upon, as it would put Illinois at the front with other great agricultural states.

# 4 More Silver Cups 4

## JOHN H. WHITMAN.

At the regular monthly meeting of the National Fanciers' Association of Chicago, April 3, 1901, the following was a part of the proceedings:

Mr. Plaehn—Mr. President and Fellow Members: It is my sad duty to announce the death of one of our oldest and most beloved members, Mr. John H. Whitman, of this city.

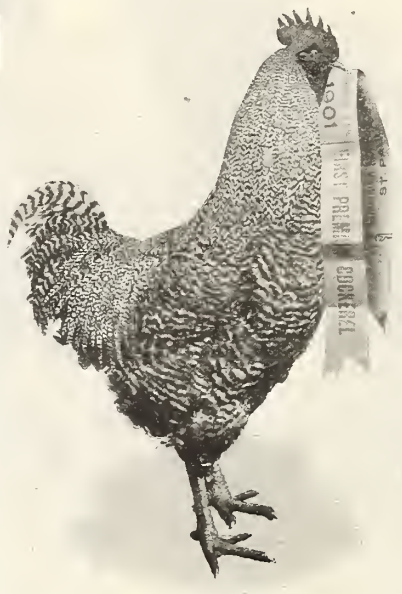
Mr. Whitman's connection with our association commenced with its foundation. Through all its career, its times of difficulties and its times of glorious success he has been in the foremost rank. He was one of the originators who remained steadfast to the end.

Mr. Whitman was a gentleman of the first quality. His was a character free from fault or blemish. Possessed of a kindly, loving heart, he was always a lover of pets. The many tasks of caring for them was with him a labor of love. He was happy when with his gentle pigeons. While he was a true fancier and sportsman, and delighted in honest competition in the prize arena yet his greatest pleasure was in contemplation and in communion with his favorites.

Mr. Whitman was a faithful member of our organization. He served several terms on our board of directors. His ripe experience and sound judgment made his services valuable. He was always ready to aid with his advice, his labor and his means. He gave freely and with great self-sacrifice to all.

It seems proper at this time to place upon our records a testimony of our appreciation of the loss we have sustained in the death of our departed friend and brother. I, therefore, move the adoption of the following resolutions:

WHEREAS, We learn with great regret that death has removed from our membership our valued friend and associate, Mr. John H. Whitman, and



First prize Barred Rock Cockerel at St. Paul, Minn., 1901. Bred and owned by N. S. Beardsley, St. Paul, Minn.

WHEREAS, Mr. Whitman was one of our oldest and most active members, whose advice, counsel and work were always sought and freely given for the advancement and best interests of our association, be it

*Resolved*, That in his death the National Fanciers' Association of Chicago loses a most valued friend and supporter, and the loss of whose efforts and labors in its behalf will be severely felt. He was ever willing to give generously of his time, long experience and expert knowledge for the good of all, and all who came in contact with him, either personally or through his writings, were early convinced of his sterling character and true devotion to the highest aim of our association. Be it further

*Resolved*, That we tender to his family our heartfelt sympathy in their bereavement, and that a copy of these resolutions be spread upon the records of this association, and that a copy be sent to his family and to the papers published in the interest of the poultry and pigeon fanciers.

The motion was seconded and after appropriate remarks by Mr. F. B. F. Rhodes and others was adopted by the unanimous vote of all present.

*Fred L. Kimmey, Sec'y.*

OSHOSH, March 15, 1901.

*C. A. Porter, Esq., Flat Rock, Ind.*

DEAR SIR: As I promised you I would send an order your way, if you dealt with me right, and which you did. The pullets you sent me are as fine as I ever saw as *workers* and that *means* layers and healthy chickens, busy from morning till night, two of the pullets are *beauties*. *Now* they are fully developed, I would not sell one of them for what I paid for the four. I suppose you know I had a friend order a cockerel from you and he is pleased also. Mr. Caswell, who bought two fine pullets of you, is also pleased. *You deserve* to be patronized. Very truly, F. B. KING.

**How to Build Poultry ..Houses..**

# THE NEWEST, BEST AND MOST COMPLETE BOOK OF INSTRUCTIONS ON HOW TO BUILD POULTRY HOUSES, FIXTURES, INCUBATOR HOUSES, Etc.

Half the success with poultry is in proper housing. Any old thing with a roof will not bring best results. Many people fail for this reason and wonder why it is. This book does away with all experimenting. You don't have to guess at anything. You get the results of years of experience and thousands of dollars spent in trying different plans of houses. There is no worrying, no scheming, no doubt, about the proper amount of space and interior arrangement. Everything is illustrated and thoroughly explained. The value of this book cannot be appreciated without a perusal of it. **It is of great value to the small breeder with a few fowls, and to the large breeder with his hundreds.** No time or expense has been spared to make it complete. Price 50 cents, postage paid.

This book will be given with a 15 months' subscription to American Poultry Journal for 75c, or will be given free for four subscriptions.

Address AMERICAN POULTRY JOURNAL, - - 325 Dearborn Street, CHICAGO, ILL.

# $1 and What It Will Do

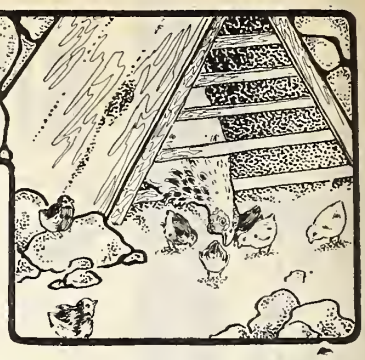
# WHY POULTRY PAYS AND HOW TO MAKE IT PAY.



*By*

## *MORGAN BATES.*

### Fourth Paper.

THE very best laying strains will prove of no value unless common sense is exercised in the matter of feeding. Above all a variety is a necessity. Bad results from the exclusive use of any feed are a certainty. Especially is the necessity of variety apparent when it comes to winter management.

During the winter months the flock cannot forage for green and insect food and substitutes should be furnished by feeding cabbage, roots, ground bone, etc. The poultryman who keeps cows will find that sour milk and skim milk return a better profit fed to fowls than to hogs, which is the more common method. An Australian writer claims to have discovered that while sour milk is beneficial in colder climates, it is injurious to fowls in hot climates. This may be true in Australia, but we have heard of no such results among American poultrymen.

The main question with the American poultryman is: How shall I treat my flocks that I may secure the very largest output of eggs? Even those who cater for exhibition trade have learned that they are, by the force of this demand in America, compelled to become largely poulterers; for lucky, indeed, is the breeder who sells fifty per cent of his product for exhibition and breeding stock. The types in breeds, the care of the flock and the feeding are three grand factors in the problem of profitable poultry raising.

No matter what the breed, it will be found that the most profusely plumaged birds lay the fewest eggs. The Light Brahma, the Plymouth Rock or the Wyandotte, whose plumage presents a smooth surface—a close fitting coat of feathers—is a more prolific egg producer than a heavily feathered bird. This statement is sometimes disputed, but always by the fancier of loose, fluffy feathered specimens, not by the hard working breeder who derives his entire living from his labor in the poultry yards.

There are hundreds, perhaps thousands, who believe that a hen will lay only so many eggs during the year, and if induced to lay in winter, the spring and summer yield will be correspondingly less. There is no absolute limit to the number of eggs. If this were true the producing capacity of all breeds, varieties and families would be alike. A cottager may take a cow from a farm where she was neglected; she may be running with other cows, exposed to all kinds of weather without suitable shelter; milked and fed by careless boys, or say, half fed and half milked. In her new home she receives kind treatment, warm stable, warm mashes and generous feeding to produce a rich flow of milk, and milked regular by an experienced hand. Every sensible person knows she will give more and richer milk under this treatment. It is the same with hens. Care and proper food will create more eggs, because the constituent parts of the egg come from the surplus nutrition of the food, which the hen prepares in her own laboratory.

As profit is the leading object of keeping fowls nowadays, the more eggs we get in winter the more valuable the product. Of course this has no reference to breeding pens and prime stock. One dozen eggs in December and January is equivalent to two dozen a few months later. We do not know that the hen expends more effort in laying a dozen in winter than she does in laying two dozen in summer. She may lay the two dozen in summer as quickly as the one dozen in winter, but at the same time she draws from her resources twice as much material for the two dozen eggs in summer. Therefore it is wise to make the hennery warm and commodious for winter, as it saves much food and conduces to a larger yield of eggs.

#### STUDY THE SCIENCE OF IT.

The beginner can well devote considerable time and thought to studying the problem of correct scientific feeding. Each one must solve this question more or less independently, as he is influenced by the local conditions, food products available in his markets and the objects he is aiming to secure and which the feed can and must form an important factor in the achievement of his desires. No ironclad set of rules can be laid down as to the quantity and quality of feed a person need give poultry, young or old. Breeds are to be considered, the surroundings, whether the chickens have free range and what nature supplies them. Whether the chicks are to be forced for early broilers or to have that healthy, continuous growth that finally produces the high-scoring prize winners, just in the "pink of perfection," to capture the blue ribbons. Just as in any other vocation, brains and common sense are necessary and will find an abundant opportunity for use in the continually arising problems in progressive, up-to-date poultry culture.

In raising stock of any kind the proper judgment as to the feeding is of vital importance, and this department of the stock farm cannot receive too much careful consideration and intelligent management. The skillful feeder studies his animals and gives them not too little or too much, but just the right quantity for best results, which amount he must learn from intimate association and daily practical experience and observation of the needs and capacities of his herds and flocks. No matter how perfect or scientific a plan may be formulated for feeding our fowls, we must be first influenced by its cost, either of production or purchase. The limit of price must vary. The fancier who has a large trade in exhibition birds can almost ignore the price of grain; with him the best is none too good and the cost is accepted as inevitable. But to the thousands who are raising poultry and eggs for the consumer and general market, the question of feeding is vastly different, and the profit and loss view determines the matter. It cannot be denied that in wheat is found the best all around food for poultry. That is to say, it contains more of the requisite elements that fowls need for nutrition

and the production of eggs. For special purposes certain other grains can perhaps be used with hetter results for short periods, but nothing can be advantageously suhstituted for it as the basis of all permanently successful feed rations for fowls. It is difficult to convince farmers that it is more profitable to feed dollar wheat than corn at one-third the price, hut such conditions do exist very often. With wheat at such high cost the poultryman must plan to use as little as possible and make up by feeding a greater variety of grains, and so supply nearly the same chemical food constituents. Thus, if much corn is fed there will he an abundant supply of fat and fuel, which must he helped out with elements to form hone and muscle, such as oats or crushed hone, to obtain a good result.

KEEP THE MACHINE IN ORDER.

If hens are considered as machines for the conversion of the feed given them into eggs, the keeping of these machines

MAJESTIC STRAIN

White Wyandottes

There are no handsomer, more profitable birds in the world than the White Wyandottes. My stock is farm raised from prize winners at big eastern shows. Yearling stock ready for shipment, a limited number of pullets and plenty of cockerels. Score Cards by Judge J. Y. Bicknell.

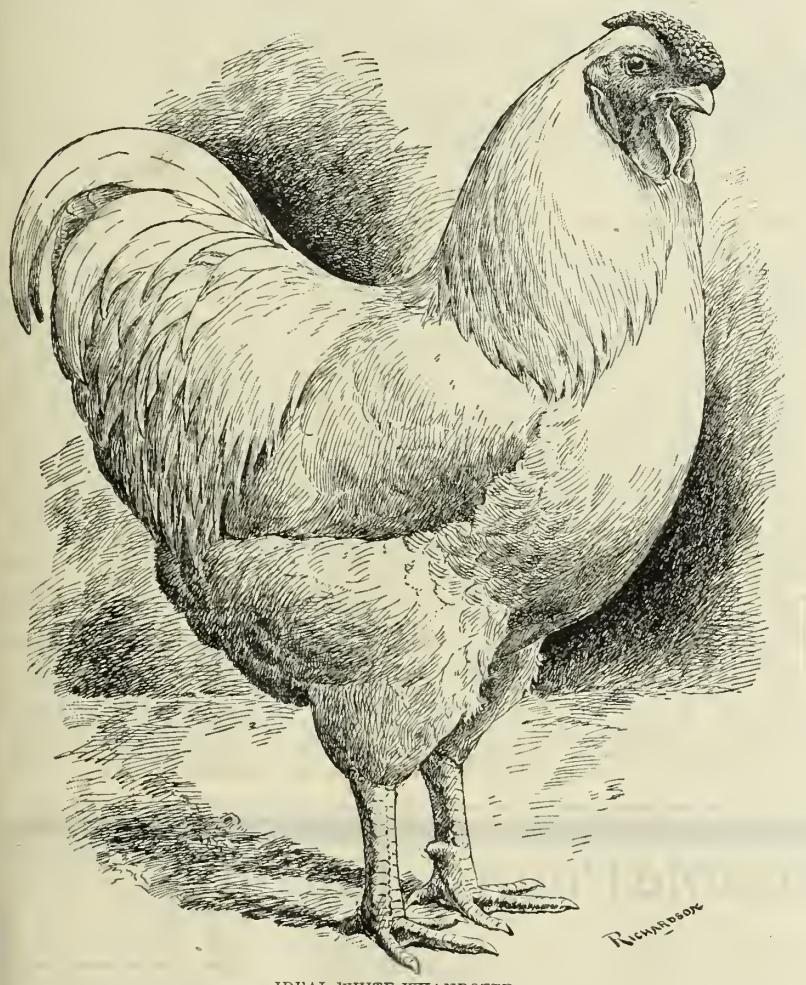
At Rochester, N. Y. poultry show was first on cock; first and second on hens; first and fifth on cockerels; first on pullets; first on pen, besides specials. I guarantee satisfaction in every particular.

EGGS FOR HATCHING

from stock scoring 93½ to 96¼ points; one setting $5.00, two settings $8.00. A trio of pedigreed Belgian Hares for sale.

C. S. Wetmore, Box 877 Lockport, N. Y.

most continuously up to the usual number natural to each. This number is from 120 to 125 per year. If then by proper feeding and housing hens can he induced to lay in the winter, when the price of eggs is high, the profit is pro-



IDEAL WHITE WYANDOTTE.

in perfect order must always be kept in mind. We may force them to an unusual output for a short time by feeding condition powders and tonics, hut that method will be found the hest which first insures a healthy, natural condition of the fowl with the highest production of eggs consistent therewith.

It is a common mistake that fowls must be left largely to nature in the matter of laying eggs. It has been proven that with proper nourishment and food hens can be induced to lay al-

portionately greater.

One secret of success with poultry, as with all farm animals, is to push early maturity, and sell as soon as ready and get rid of the expense of keeping. Then, with poultry there is this added advantage that the profit is not confined to the chicks, but the eggs are a constant source of income, and it is quite possihle to manage so as to have eggs to sell the entire year.

FELCH'S RATION FOR FOWLS.

I. K. Felch recommends the following ration for fowls, when the grains can be procured at reasonahle prices:

| | |
|---|---|
| Beans | 5 lbs. |
| Wheat bran | 10 " |
| Oats | 15 " |
| Barley | 10 " |
| Corn | 15 " |

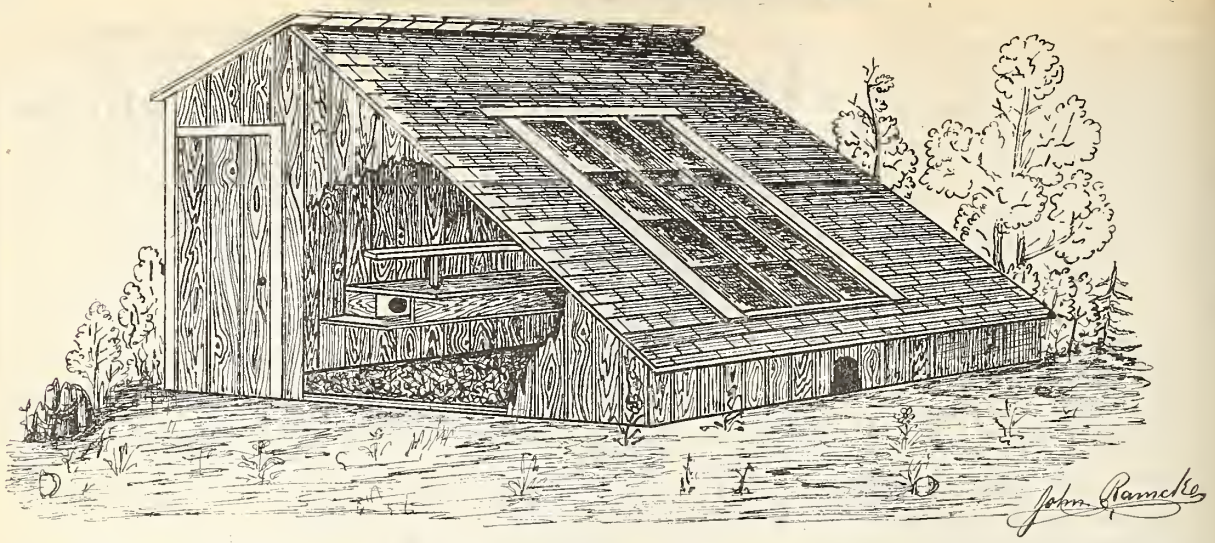
When thoroughly mixed and ground fine together, Mr. Felch says, this constitutes the best possihle developing food for thoroughhreds. For the morning meal, take four parts of this ground mixture and one part of ground beef. Scald over night. This is also a good ration for the egg-producing flock. If the hirds are confined they are deprived of the chance of gathering worms and insects which otherwise they would secure in the morning. Another reason why this should he the morning food is: As a rule three-quarters of all the eggs produced are laid hefore 12 o'clock. The hens heing satisfied with the soft and meat food, instinctively retire to rest and take to the nest while this food is leaving the crop.

One of the best regular feeds for laying hens at any season of the year is good, sound wheat. Wheat may be fed in many different forms, the whole grain when hoiled affording perhaps the greatest proportion of nutriment, as well as being exceedingly wholesome. Ground wheat or wheat bran may form the principal ingredient of the morning mash, and for scattering in litter to make the hens scratch there is nothing better than dry wheat, which may also be fed to advantage at their evening meal.

MEAT IS DEMANDED.

If we expect many eggs in winter we should provide some meat for the hens every day. Green hones will answer the purpose admirahly. Grind or cut the hones in a hone mill small enough for the hens to swallow and let the hens have one generous meal a day, as much as they will eat up clean in half an hour. This will hring eggs if anything will. All the tahle scraps, stale hread, hroken meats and cold vegetahles are the chickens' natural inheritance. Drop them in the liquor in which the meat and vegetables were hoiled, heat and thicken with wheat bran or corn meal, add a pod or two of red pepper, and you will have a meal fit for the finest fowls in the land. There is nothing they will appreciate more highly, for such a dish gives them the necessary variety, and hoth stimulates and satisfies the appetite from day to day. Hens, more perhaps than any other livestoek, need a variety.

While it is generally admitted that wheat is the most satisfactory grain for fowls, the fact remains that an unvaried diet is never heneficial. During cold weather the heat producing foods may he given in large quantities, as a change.



A CONVENIENT AND PRACTICAL POULTRY HOUSE.

The illustration given is for a poultry house 10x10 and 8 feet high. The length of this can be extended indefinitely if desired. If this size house is built of common dressed boards, with three battens on the outside and Neponset roofing paper fastened on with laths on the inside, and the slanting front, as shown, covered with shingles, the cost of material would not exceed $15.

In very stormy weather or when the sun is shining very brightly it would be well to have a curtain of this roofing paper arranged to roll down over the window.

The large floor room gives ample opportunity to have a good lot of litter thrown about to afford scratching room for the confined fowls during the winter months. The nest boxes are here nicely arranged, giving the secretive hen opportunity to select her nest in the darkened space or alley in front of the openings into the nests. The eggs can be conveniently collected from the back of the nest, which should have a drop door opening into the hallway. The roosts are arranged above the row of nest boxes and should be movable in order to frequently clean or renovate to prevent lice and vermin collecting.

---

Corn may be given as an evening feed, with a little buckwheat and a more generous proportion of barley or oats. Clover hay, cut and steamed, with bran sprinkled upon the warm mess, is very acceptable.

REGARD THE TEMPERATURE.

All soft or mixed foods should be given warm in winter, and luke-warm water or milk offered three times a day. Do not let them have anything to eat or drink that is icy cold. And no matter how excellent the bill of fare may be, don't continue it without change till the hens tire of it. But be careful, also, not to feed so liberally as to make them fat. Plymouth Rocks are easily made too fat to lay well. During all inclement weather poultry should be comfortably housed and cared for in such a manner as to make them contented within doors. A hen with frosted feet or a frosted comb lays no eggs; she loses flesh, and it will take a month or two of good feeding to bring her up again.

The exclusive use of either hard grain or soft messes as food for fowls is wrong. Few fowls will gorge themselves with one article—especially with hard grain—if they are free to select their food. Some are greedy, of course, and will overeat if given a chance, but the rule is against such a habit. When, however, the surroundings are such that fowls are permitted to make their own selection, they prefer a lighter and more bulky food than hard grain, giving preference to that which is just ripening, or which has been buried and softened by contact with the damp earth, and when this occurs under healthy conditions it is more wholesome and digestible, and guided by instinct they prefer it to hard, dry grain. Grubs and berries are also eagerly sought for, and when obtainable they are satisfied with less than 1 or 1½ ounce of green food per day. All fowls have not the same capacity of crop, and by the common practice of feeding the domesticated fowl with hard grain, one bird receives more than is required, whilst another gets less than satisfies its craving.

CONDITIONS NOT NATURAL.

It has been said that nature is the best regulator of digestion, and if the conditions under which fowls lived and ate were natural it would be so, and under those conditions health and vigor may be maintained, but with the result of only one nest of eggs per year. We, however, feed for higher results, viz., a full egg basket at all seasons. As a consequence a further amount of food is required for egg formation, and egg-making is not easy work if we add to this the work of converting food that requires prolonged digestion. The strain upon animal economy is something immense, and the whole of the digestive functions become weakened and impaired by overwork. Rely entirely upon good, sound wheat, barley, oats and Indian corn for food in preference to mysterious mixtures, meal or otherwise. Get a small mill or crusher and grind your own, and know what you are feeding with, and remember that meal is more

---

"Profitable Poultry Keeping in All Its Branches"

is the title of our new 1901 catalogue, which is the largest, the most complete and comprehensive work ever issued on the poultry subject. Contains 224, 8x11 inch pages, 200 new and original illustrations and a world of matter, all fresh and right up to date. Has numerous articles by well known poultry specialists, together with their faces, homes and their plants.

feeding than grain, and cooked or partially cooked food is more feeding than raw.

It is not necessary, however, that all grain should be ground, but at least two-thirds of the grain fed to poultry should be cooked, and after nearly satisfying their hunger with the cooked grain, afterwards give a little hard grain as a supplementary ration. They are thus fed with a more hulky and digestible food, while the supplementary ration of hard grain gave the requisite tone to their digestive functions, and the birds are full of vigor and health, and on the score of economy it should recommend itself to all. To be properly cooked the grain should he well covered with water, and steam should he used as a medium for heating; by this means the whole of the water can he either evaporated or absorbed by the grain, cooking it thoroughly without its becoming sticky, hurnt or cracked. In this condition it is as agreeable to the touch as green corn.

GREEN FOOD IS REQUIRED.

A most economical soft feed may be prepared as follows: One-half green sprouts cut into short lengths, one-fourth wheat or oats, one-fourth coarse cornmeal, all mixed together, and saturated with hot water, seasoned hy a beef shank or scrap of any kind of cheap beef; cover well and let it swelter and steam awhile. This mixture is a model egg producer, and nothing on earth can heat it for that purpose.

Preparations for the mid-winter season should be made hy storing small cabbages, potatoes and turnips, to he used as green stuff when the sprouts are not available. Town people should huy such things while cheap, and country people should raise them. But anyone that **has** a few yards of ground to spare can raise the grain sprouts, and they are the basis of cheap feeding.

The same space of ground that will yield one hushel of wheat or oats can be made to produce one hundred bushels of green sprouts in a year hy planting and re-planting, using a part of it now, a part later, another part still later on, and then hegin on the first space and plant over and over again, using the droppings from the hen-roosts as a fertilizer. Each planting may he gathered over three times before it should be replanted. For autumn planting, wheat and rye should be used. Rye will stand more pulling than any other grain. We never turn the chickens on the green, hut gather and throw it into the chicken yards.

ONE OF THE PUZZLES.

Feeding for eggs is the most puzzling suhject that ever presents itself to the poultry keeper who studies his business. Some breeders feed by rule, but it is noticeahle that such feeders are constantly trying to improve on their formula. One man feeds oats in large quantities, and another never feeds them at all. There is a disposition to make an avowal that we cannot say just what mixture of feeds would produce the hest results. Some breeders are inclined to place corn at the head of the list of grains, but to feed all corn unless the flock has unlimited range and needs but little grain of any kind would cause egg production to cease in a short time. Corn and plenty of green feed, and a range rich in insects, make a first-class egg food, but where the hens are shut up, corn should not make more than one-third the grain fed. The remainder should he made up of wheat, oats and bran in about equal proportions, and most of the corn that is fed during the year should be given during the six cold months.

But a diet of grain alone will not stimulate egg production. With it must he given other feeds, such as milk, meat scraps, crushed bone, green cut hone, if it is to be had, ground shells and plenty of green feed in the shape of grass or other green stuff in the summer, and raw chopped vegetables in winter.

It is impossible to say how this should be fed. Give a little of each kind often, and it will be found pretty hard to feed the hens so much that they will get overfat. With all the talk ahout overfeeding hens, one fact has been impressed on us. It is almost impossible to get a hen fat while she is laying regularly. This applies to all the non-setting breeds and to the American class. It would probahly apply to Langshans also. The weight of evidence indicates that lack of variety in food is the principal cause of non-production of eggs in any flock.

It does not seem necessary, in this enlightened age, to say that table scraps should never he thrown out near the house, as an easy way to clear the table dishes and feed the fowls. Of course no poultryman would permit such a slovenly habit; hut it is frequently done by women whose fate is to live on a farm against their will and whose "men folks" are of the variety which asserts there is no profit in fowls. The instinctive cleanliness of housekeepers who are really competent to keep either hens or house, causes them to gather all tahle scraps into a proper receptacle and have them fed to the fowls in a place and at a time best suited to the purpose.

## BOWEL TROUBLE IN CHICKS.

Diarrhoea is one of the dangers of chickenhood and is a symptom, if not a disease, altogether too common among young birds. It is met with in hoth hen-raised and brooder-cared- for chicks. It is caused hy one of two things: either too little heat or coarse, indigestihle food. Many a hrooderful of chicks has passed on to the "silent majority" simply because its owner persisted in regulating its heat by a thermometer resting on the hot floor. I never got any satisfaction from the use of a thermometer in a hrooder, as I found that the best indicator was the chicks themselves. If you keep the heat at the right temperature you will find the chicks lying near the fringe of the "mother," looking contented. If you find them crowded near the source of the heat, it is not warm enough. A low temperature means a chill; a chill in a chick means an inflammation, usually of the bowels—diarrhoea. The hen, long confined to her eggs, when set at liherty with her chicks, is inclined to enjoy her freedom and leave the chicks to cry with cold while she pretends she is hunting food for them. Again a chill—also diarrhoea. The hrooder rightly managed is hetter than the old hen. It is always ready to "mother" and warm the weary chick.

Another cause of diarrhoea is coarse or half-cooked food. Too much bran, or only warming it with tepid water, leads

to diarrhoea. The safe plan, to avoid this danger, is to bake, in milk pans for at least one hour, all chicken mash. I take no chances from half-cooked food, and am sure, from my own experience, that it pays well to take the extra time involved.

Avoid feeding sour milk to very young chicks, as it, in hot weather, is likely to produce bowel trouble. The absence of grit will loosen the discharge from the bowels.

A sudden shower sometimes so chills young chicks as to produce diarrhoea.

Chicks with diarrhoea should first of all have a comfortable place to rest in. This does not mean they are to be coddled. They are to have a good chance to get in the open air and on clean earth if they wish, with just as free an opportunity to get into a warm brooder when they so desire. The food should be either dry grain, with plenty of the right sized grit, or well cooked mash that is constipating. Mash to he of this character should contain less bran and more middlings and be mixed with milk and baked.

Hens have diarrhoea from improper feeling. Irregular, careless giving of food, too much today, too little tomorrow, none at all the next day, upsets crop, gizzard and bowels.

Another source of bowel trouble is filthy drinking water. It is not enough to add each day water to that left over from the day before, never cleaning the dish. Water vessels should be rinsed every day and filled with fresh, clean water, not forgetting a weekly scalding in warm weather.

Old hens that have been overfat and are breaking down as a result, often have a bad smelling diarrhoea.

Hens running wild on the farm, having full liberty to forage for themsedves, seldom have diarrhoea, hut it appears in flocks confined and dependent upon man for food and drink.

Give every bird with diarrhoea the chance to get at growing grass, if in the season of it; feed dry grain, largely wheat; add one teaspoonful tincture iron to each quart of drinking water, and give in earthen vessels. If the attack of diarrhoea is sudden and acute, give one teaspoonful castor oil and follow it in an hour with three grains Dover's powder.

Diarrhoea is seen in some cases of scrofula, consumption and tuberculosis and will be considered in connection with those diseases.

## OUR LARGE POULTRY SHOWS.

We give below a condensed report of the Philadelphia, New York, Chicago, Boston and Crystal Palace (England) shows. There may, possibly, be a few errors in some parts of this, because premium lists and catalogues are not complete; but these errors are so trifling as not to detract from the totals.

American classes include Rhode Island Reds.

Breeding yards counted as one entry.

Philadelphia offered 25 or 30 cups, besides silver and bronze medals.

New York offered about the same number of cups, and a number of other valuable articles, also diplomas.

Chicago offered many cups, medals, special badges and other merchandise.

Boston offered more than 50 cups, and in addition to this, many special awards of merit.

The individual specimens contained in exhibition-yards and displays would add considerahly to the total number at each show; if they were all numbered and counted as at the Crystal Palace Show, Boston would fully equal them in the aggregate display. *T. F. McGrew.*

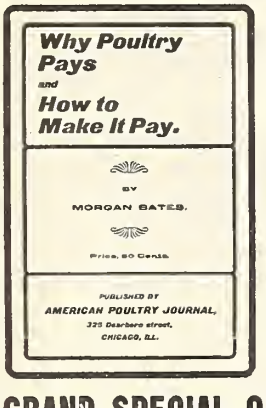
[Note.—Mr. McGrew calls our attention to the fact that the report as published last month was incorrect through an error in placing the names of the shows at the head of their respective columns.—Editor.]

## INCUBATORS AND INCUBATOR CHICKS.

When you select an incuhator, be sure that you choose one that is standard in quality, one that has and will continue to do good work in the hands of an amateur. Do not for one moment get the nation in your head that any child can run one; but you may depend upon it that any good sensible person, man, woman or child that is old enough can learn to run one very nicely if he will give the matter his attention; hut like the sewing machine or the churn it must have sensihle attention or poor results must follow.

Lamps must be properly cleaned, filled and the wicks trimmed. It takes fully as much care for the lamp that heats the machine as in the oven for haking. It must he just right. The regulator will do its part; but should those in charge of the machine be so careless as to refill and fix the lamp and put it back without properly regulating the flame, too much heat may be the result. This is the fault of the operator; the same if too low, and too little heat results.

When the machine is started one should pay strict attention until one is fully satisfied that he has turned off the proper sized flame that will, with the help of the regulator, keep the proper degree of heat within the machine. When this is intact the machine should go along for twelve hours without attention. Frequent observations for the first day or two are necessary to full assurance that the lamp and regulator



# The Short Route to Success

Our new book "Why Poultry Pays and How to Make It Pay," will tell you what you want to know and what you must know if you succeed with poultry. The book was written by Morgan Bates, who was for 14 years editor of **American Poultry Journal.** It is the newest book of the kind and has been pronounced by expert poultrymen to be the

**MOST COMPLETE AND THOROUGH TREATISE ON THE POULTRY BUSINESS**

which has thus far appeared. Chapters are devoted to various subjects, and just the points you desire to know are easily found. It tells how to start and how to keep going right after you have started. It instructs its readers in the methods of feeding and the best foods for layers, breeders and exhibition birds. It has chapters on "Diseases of Poultry," "Poultry Houses and Fixtures," "Success With Incubators," "Success With Brooders," and, in fact, covers every phase of the question. It is a complete and practical guide and directory to the best methods which have brought success to thousands of poultrymen. **It is a school for the amateur and a help to the expert.**

**GRAND SPECIAL OFFER** The regular price of this book is 50 cents. We will send it to you and give you a 15 months' subscription to American Poultry Journal for 75 cents, or the book will be given free for four subscriptions at the regular price of 50 cents.

Address **AMERICAN POULTRY JOURNAL, 325 Dearborn Street, CHICAGO, ILL.**

are doing their proper work. When this condition is reached, note the height of the flame, and keep it to this form, for in this way but little trouble comes.

The heat should hold very nicely in a good machine when you have it properly regulated. I have had machines go through the whole three weeeks and not vary two degrees during the whole period; while I have seen them vary as much as four degrees in one day. This is partly the fault of the attendant, and partly the fault of the machine. For these reasons it is well to consider the machine you buy before you secure one; also to pay proper attention to printed directions when you get it. An expert can run successfully any machine; but this is not the case with the thousands who buy one machine for their own use. This one machine must be all right within itself, and must be run acording to rule if you are to succeed with it.

The several machines have different methods of turning the eggs, all of which will accomplish the desired end. Some people turn them twice, others once in twenty-four hours, with equally good results. I feel no hesitation in saying that the hen shifts her eggs much oftener than is supposed. The next time you set a hen, mark two of the eggs with a black line all around them, lift the hen from the nest two or three times in one twenty-four hours, and note the change of position of these two eggs; and I believe you will conclude that she changes them oftener than once a day.

The hen leaves her nest regularly once a day when she has her own way about it, usually during the morning hours. If she can find food, water and a dust-bath she will return to the eggs in from twenty to thirty minutes. During this time her eggs have had time to air and cool, her body is cooled off, and she returns refreshed to the eggs. Naturally one would suppose the eggs would be considerably cooler when she returned to them than when she left them; but they hatch well. Usually she hatches every hatchable egg. And we all work to have our incubators do as well as the hen. Might not it be well to study her methods?

Air and ventilate the eggs in a *proper* manner. Don't be fearful of their getting too cold, providing they are in as warm a place as the hen has her nest. Let both eggs and the machine have *proper* airing—not in a freezing atmosphere, but where the surroundings are right for the machine. Some people keep them out of the machine 10 minutes, others 15 and 20. I believe from 10 to 15 minutes, according to the temperature of the room, to be about right. You have thus struck about the average time that the hen allows herself when she leaves the eggs. Less than half as much airing will be plenty for the machine. Don't allow it to run below 90 or 95 degrees when the eggs are out.

Testing the egg has nothing to do for or against the hatch. It simply furnishes you with facts in advance. If the eggs are tested the seventh or tentn day, you can select the clear eggs, which are as good for general use as any eggs two weeks old. If perfectly clear and free from life-giving germs they will keep longer than other eggs. Many use these clear eggs to cook for the chicks or in making corn bread for them. I hardly think anyone could tell them from other eggs of the same age if made use of for cooking or the table, as they are not injured in the least beyond other eggs that we keep in box or basket for two or three weeks.

The advantages of testing the eggs as soon as practicable are many. If two or more incubators are filled and started the same day, when the time comes to test them it may be possible that the good fertile eggs will all go into one machine; and the other may be filled again, thus saving time and space. Those who run a number of machines, and are expert at testing can select all the clear eggs from the fertile eggs the third or fourth day; thus selecting the clear eggs for market before they begin to spoil. This is a large business, and many of what are called tested ducks' and hens' eggs are sold in the cities. The sooner they can be selected from the fertile eggs the better for the handler, who turns his money the quicker.

The question of moisture has been much considered. We never furnish any artificial moisture for our machines, neither do we keep them in hot rooms. Up to May 1st they are kept on the first floor in one of the living rooms—that is, next to the kitchen. All the heat that gets into the room comes through an open door into the kitchen, or from the machines themselves. After May 1 they go into the cellar under the house. Machines that are constructed for this method supply their own moisture from the atmosphere. It is quite possible to furnish too much moisture when a pan of water is put into the machine. The less aid we must give the better. When it is necessary to use a moisture gauge to be satisfied that there is enough moisture in the machine, or when we must move and remove pans of water into and out of the machines, it adds to the complications of management and gives that much more trouble. The more simple the management the better, provided they will do good work, the test of which is their ability to hatch every hatchable egg.

When the hatch comes in sight, don't open the machine until it is complete. The conditions of moisture and aid for breaking the shell should be complete at this time, and to open the machine may so disturb these conditions as to retard their advancement and create other conditions that may reduce the results materially. If your machine is properly constructed the ventilation will be such as to make the chicks comfortable after they drop below the tray, where they may stop for a day or more and do well. I have seen them kept in the lower part of the machine as a brooder for three days and do well, being provided with food but no water.

*T. F. McGrew, in Country Gentleman.*

---

Weakness of the legs is a trouble appearing in young birds, cockerels more often than pullets, and is seen usually between three and five months of age. The larger breeds are more prone to this trouble than the smaller and more active birds.

This weakness is caused by pushing for growth by feeding too much fattening food and condiments, thereby increasing the weigbt of the body beyond the ability of the legs to support it.

If your birds are getting into this condition you will notice at first unsteadiness in gait. They move slowly and the limbs slightly shake. In a week's time they can hardly keep up on their legs, and when feeding will sit down so the body is nearly on the ground. Looking the bird over you will find little to attract your eye, except the weakness of the legs. The bird otherwise appears to be healthy. The feathers are bright, the eye clear and the appetite good. As the days pass the bird loses his desire for food; is picked upon by his brothers; lice multiply upon him; he becomes thin; the skin grows dry and crackly.

In the very beginning of leg weakness remove all causes of trouble. Spice, corn and cornmeal, buckwheat and rye, should not be fed for weeks to such birds. Have regular times to give the meals and make each bird work for part of his food. If possible, have sick birds by themselves. to avoid imposition by the other chicks. A grass run, with shade and cool water, will help cure these cases. If you have time and patience, one-tenth of a grain of quinine given to each bird with leg weakness, every morning, will help bring up the chick to health again.

# Eggs at Half Price

**to Readers of the Swineherd.**

**Barred Plymouth Rocks,**
**White Plymouth Rocks,**
**Light Brahmas,**

**$1.00 Per Sitting.**

My Barred Rocks are the Damon prize-winning strain; White Rocks are the "Stay White" strain; Light Brahmas are the Hartnest Pedigree and J. B. Foot strains, and as good as the best. # THE BELGIAN HARE.

THE BELGIAN AT HOME.

From *Chasse et Peche.* Translated by Dr. H. P. Clarke.

(Continued from last month.)

WE bought one or two pair of leporides at the zoological garden of Ghent about the year 1868, and bred them with careful selection at Grammont for three or four years. Then becoming director of the zoological garden, we moved with us to Ghent our choice breeding specimens. These infused a new vigor and perpetuated the color of the old race. One day we further added to the collection a pair of leporides which were smaller but of brighter color. We had bought them at a public sale at the Jardin d'Acclimatation of Liege. The director, Mr. Roberty of Grady, told us that he had obtained them from a blacksmith of Landen, who claimed to possess the secret of obtaining at will the crosses between the hare and the rabbit. The leporide continued to thrive and multiply at Ghent and in that neighborhood, and each week we had to satisfy the order which reached us, to ship to London specimens of the Flemish Giant rabbit and of the leporides. These last were valued at about a third as much as the Giants. In England the two races had been confounded, as we have just had proof of this in the phrases framed, the best looking Giants were given classes at the exhibitions under the name "Flemish Giant," the mediocre specimens were called "Patagonians," while the leporides became "Belgian Hares."

Some time later we had dealings with Mr. Lumb, secretary of the Belgian Hare Club, surnamed in England "King of the Belgians." He sent us his photograph, which thus enabled us to judge of his slight resemblance to his royal namesake. He wrote us upon the letter paper of his club, bearing at the head an engraving representing the Belgian Hare "Champion Empress," first grand prize at the exhibitions. We found this engraving so bad that we took upon ourselves the task of copying the design, but so changing it as to conform to our ideals, according to our remembrances and the drawings in our sketch-book, and published the result in *Chasse et Peche.* We remember very well that the King of Belgian rabbits complimented us highly, adding to his praise that our ideal design was the best which had ever appeared. Mr. Wilkins must have been of the same mind, for after having reproduced our design in phototype, he published it in his book with this legend: *"Chasse et Peche,* Vol. VIII., No. 38. Leporine female 'Champion Empress,' of Mr. W. Lumb, Cleethorpes, England, 1875.—Mr. Lumb's 'Champion Empress,' the first great winning Belgian Hare." He has forgotten always to add that it was ourselves who designed it in 1890, of which it is easy to assure oneself by examining the picture with a microscope.

According to Dr. Barham, "the first Belgians raised in England were the produce of imperfect specimens imported from Belgium. These last, although often having many race characteristics, were spoiled by defects such as red light or dark, with little or no narrow edging of black upon the ears, toes white, even feet white or barred, defects of the front part genrally, pale nose, a white star in the forehead like one sees in horses (and in hares), with little or no ticking. I possessed a good many of the best specimens in my youth (he is thirty-five years old), and not one was exempt from one or the other of these defects. In order to overcome these irregularities, the English fanciers crossed with the ordinary brown (sandy) rabbit having upright ears, and even with the wild rabbit. Though an improvement in certain of these bad

**Money in Belgian Hares.**

You can make more money raising Belgian Hares than in any other branch of the live stock business. If your poultry is not paying a satisfactory profit, raise Belgian Hares and you will be satisfied. If you have a little time to spare from your poultry, try Belgian Hares and increase your profits. They are easy to raise and cost little to feed.

Money making stock for sale at the following prices: Standard pedigreed breeders, $4 to $15 each; youngsters from $2.50 each up. Meat stock breeders, $2.50 to $5 each; youngsters from $1.25 each up. Correspondence solicited.

C. W. LEISTER, Wauwatosa, Wis.

**LONG-VIEW BELGIAN RABBITRY.**

# BELGIAN HARES.

A practical breeder knows "that good points do not come by accident." There necessarily must be good blood to sustain points. High grade **IMPORTED DOES** bred to such bucks as **FASHODA'S IMAGE,** sired by Ch. Fashoda (World's prince of Belgians); **BANBURY DUDE,** sired by Lord Banbury, by Ch. Banbury, by Ch. Moulton Mystery; **YUKON LAD,** sired by Lord Dearborn, by Ch. Yukon, by Ch. Unicorn; **LORD CURZON** sired by Gold IV, by Old Gold, Ch. Moulton Mystery; **EDINBORO BOY,** sired by Golden Edinboro, by Ch. Edinboro, by Real Gold, means points and pedigree combined. The above bucks at stud—service limited. No job lots; no bargain sales; no scrubs; no 95 to 98 point Hares for $1.50. I am not selling score cards; but HONEST ANIMALS at the RIGHT PRICE.

**W. T. GALLAWAY, 496 LaSalle ave., Chicago, Ill.**

points may have resulted, the cross has changed the form and with it was lost the distinction of race. The Belgian Hares have become of a structure more thick-set, more rabbit-like, to an extent that the remedy has been indeed worse than the original defect. I have always suspected that the rabbit had something to do with the formation of the famous 'Maori Queen.'"

The loss of black pigment with subjects bred in captivity, of which Dr. Barham complains, confirms what we have ourselves said, which is to say that the leporide pales in captivity, but on the other hand in liberty it takes the form, the color and the habits of the wild rabbit. We have, furthermore, shipped to England, where we have sold them by wholesale only the specimens more or less defective, while the rare and valuable breeding animals, the more hare-like, we have kept for ourselves. We explain less easily the light red of which Dr. Barham speaks. This red never existed upon the leporide, at least it was not produced by crossing with the ordinary brown rabbit, which, according to him, was co-operative in the formation of the race.

We have in this regard an opinion entirely different.

"Although some years ago," says Mr. Wilkins, "it was decided by a body of naturalists equally as learned as the Council of the Zoological Gardens that the crossing of the wild hare with the Belgian hare was a thing impossible, there have been found from time to time persons who have wished to prove that the cross had been effected. Some have even exhibited specimens which they claim to be hybreds of these two animals, but each time they have presented them, they have not succeeded in giving evident proofs of the assertion."

*Chasse et Peche* has furnished upon this subject proofs sufficient and also written evidence establishing the existence and the fertility more or less limited of the animals half rabbit and half hare. Nevertheless, a scale of points for the Belgian hare seems to prove that the savants have treated the matter lightly in opposing a simple negation to the proofs furnished by the breeders, probably Irish. The Belgian hare might have been crossed with the white hare, that which in summer becomes brown, otherwise it would not have this brown color, which, if it could be fixed in a race of domestic rabbits, would not be in any case capable of transmitting itself indefinitely, like that seen in the Belgian hare during the past twenty years; and as were all the specimens, very pure or crossed, of Flemish Giant which we observed at the fat fowl show of the Smithfield Club. The brown color of the domestic rabbit can not be able to transmit itself in a constant manner because in domestic animals the brown is only a secondary color, derived from the black. Hence the brown color of the old-time Belgians of England can proceed only from a new cross—disputed or not— with the hare of the north.

(To be continued.)

### NEITHER BOOM NOR FAD.

The unprecendented interest shown in poultry at the present time is not the result of particular effort by either the press or the breeders. It is neither a boom by a faction nor a fad by a few fanciers. It is, on the contrary, a legitimate growth of a profit-bearing industry. The basis is sound, firm and enduring. The manifestation is grounded on substantial reason.

There must be a demand for any class of product before there can be formed a systematic plan of supply. The call meets with response. This is, in briefest statement, an explanation of the truly phenomenal work being carried on to-day by the poultrymen of America. A market exists for all the stock that can be raised.

With the extension of the trade comes a new requirement—the improvement in quality of goods offered. Buyers of table fowls and eggs insist upon the very best grades. Thus one phase of the elements co-operate to the end most desired.

Among the breeders of poultry the spirit of emulation obtains. Once a breeder, soon a fancier. So in very short space of time we have the ranks of the intelligent admirers of fine poultry increased by recruits to the "fancy." No man can raise even the commonest fowls without perceiving wherein they may be improved; and experience speedily teaches him that to improve the flock is to improve the net profit. The industry can not be overdone, since the larger the supply the greater the appetite. One good fowl on the table creates a taste for more of its kind. The product is literally consumed, and "appetite grows by what it feeds on."

The ease with which fowls can be raised as a diversion and wholesome avocation, by professional men and all other classes of home-owners, increases the demand when once the fact is appreciated. And such breeders call for the very best specimens short of actual show birds. This, in turn, makes a market for stock of fair value, say in the $10 and $15 class. Fanciers find a steady request for their medium prize-winners.

The farmers are fast coming to accept the truth of the declaration that good poultry pays. Here we have a market for birds in the $5 and $10 class. It pays to breed them at that rate.

Look where we may, we see encouraging indications of a developing industry. *American Poultry Journal* has this year added more names to its subscription list than ever before in one season. As a result of this fact our advertising pages are kept filled far beyond the customary season of sales. Heretofore the "busy" time has generally terminated March 1, but now there appears to be no evidence of a special subscription season. We look for a steady growth through the summer months, and we confidently believe that the fall trade will open at a point never realized before.

If our readers, thousands of whom are personally unknown to us, will do us the favor to feel that we are individually concerned in their welfare as poultry raisers, we shall esteeem the acts as an especial honor. They should feel free to write letters and ask questions. This business is interdependent. We owe our success to the subscribers, and consequently we want them to understand that they are the ones nearest to us. The JOURNAL is conducted for them. Let us be truly a fraternity.

## HALBACH'S LIGHT BRAHMAS AND BARRED ROCKS.

We wish to say for the benefit of those of our readers who are thinking of purchasing stock or eggs for hatching, that Messrs. Halbach Bros., of Waterford, Wis., breeders of Light Brahmas and Barred Rocks, are one of the most liberal firms in the business. They are not only liberal in their treatment of customers, but they have high-grade stock that is sure to please even the most exacting and consequently they are desirable people with whom to place an order. During the past show season they met some of the strongest competition in both varieties and their magnificent record is the best possible evidence that their birds are of the right kind and bred right. At the Burlington, Wis., show they won more prizes on Light Brahmas than any other exhibitor. They have attained remarkable success with this variety and the birds are especially strong in color of wing, which is so difficult to get, as all Brahma breeders know. They have had birds which the judge has passed as perfect in this section. Their flocks are not made up of a few high-grade birds and the rest poor specimens, but the average quality is high, and this is an item of great importance when figuring on where to place an order for eggs for hatching. This firm has retained all their prize winners for use in their breeding pens and the product of their matings will be such as will hold its own next show season. After the breeding season is over they will dispose of a limited number of their best birds in both varieties and will cheerfully and promptly answer all inquiries describing fully the individual birds which they will sell. These will be birds which will make valuable additions to any flock and we would suggest to those wanting anything in this line, the advisability of corresponding with Halbach Bros. and getting their prices on the surplus birds they have to sell. For the balance of the egg season they will sell eggs from special matings at prices which make them real bargains. Their ad will be found on page 404.

# Items of Interest to Buyers and Breeders.

### BARRED ROCK STOCK AND EGGS AT A BARGAIN.

Mr. Ed. McCulloch of New Albany, Ind., announces in his ad. this month that he will reduce the price of eggs after May 15 to $2.50 per sitting. When the quality of his stock is considered it will be seen that this price is an exceedingly low one, but Mr. McCulloch has incubated all the eggs he desires this season and will therefore have a large surplus for sale. He will also sell some of his best breeding birds. In writing of his first prize cockerel at the exhibition of the Indiana Poultry Association, Mr. Felch says: "Your cockerel was a fine bird or he would never have gotten 94 from me. You may well be proud of him. He will be remarkable in the male chicks he will beget. You can claim that this was the highest score given any Barred Rock by me at any show this season." In addition to Mr. Felch's endorsement Mr. McCulloch's show record is such as justifies him in claiming that his stock is as good as the best, and we have no hesitancy in recommending him to our readers. He is the popular and efficient secretary of the Indiana Poultry Association, and is one of New Albany's most respected citizens.

### STEINMESCH CHICK FEED IN MILWAUKEE, WIS.

Having had numerous inquiries for our *Chick Feed* from the northwest, we have appointed as our agents for Milwaukee, Wis., and vicinity, Messrs. Kneisler Bros., No. 711 and 713 Kinnickinnic avenue, wholesale dealers in feed, flour and hay. *Steinmesch Chick Feed* is sold in Milwaukee at St. Louis prices. $2.00 per 100 pounds.

### TWENTIETH CENTURY POULTRY FOOD.

We wish to call the attention of our readers to the ad of Dr. Joseph Haas, V. S., Indianapolis, who manufactures and sells the "Twentieth Century Poultry Food." This food is for both young and old stock and is used and recommended by some of the most successful poultrymen. The demand for it is constantly increasing simply because it is a really meritorious article and all who are not having the best success with their chicks should send to Dr. Haas for at least a 25-cent package. He is the proprietor of the Indiana Poultry Farm and is an extensive breeder of prize-winning Light Brahmas, Buff Cochins, White Buff and Barred Rocks, White Wyandottes and S. C. White Leghorns. His birds were winners last season in strong competition and he can furnish eggs which will produce winners for his customers.

### SPECIAL SALE OF PARTRIDGE COCHINS.

S. A. Noftzger, North Manchester, Ind., is sending to all interested a circular describing and quoting price on 77 individual birds which he now has for sale. These birds are all either prize winners or descendants of winners, and the prices range from $5 up. Many of these birds are the cream of Mr. Noftzger's flock, and his only reason for disposing of them so cheaply is that he has been successful in raising many more just as good. His birds are heavy feathered, good shape, and grandly penciled, and this special sale, beginning May 1, is an exceptional opportunity for Partridge Cochin breeders to get some fine birds at bargain prices.

A "Miles Montauk" wing. E. L. Miles, Sag Harbor, N. Y.

New London, Ohio, March 22, 1901.

On March 15 the writer visited Brookside Poultry Farm, owned by Mr. Ira C. Keeler, Prospect, Ohio, and scored 288 Wyandottes, Golden and Whites, about an equal number of each. All were 1900 hatched. In summing up the scores of the 288 birds, we find that 49 of them scored 91½ to 92½; 95 more scored 93 to 93½; 78 of them from 94 to 94½; 68 from 95 to 95½, and 13 from 96 to 96¾. These birds were handled under the same conditions as in show room and are undoubtedly the highest scoring lot taken as a whole owned by any breeder in Ohio. I doubt if there is an equal lot of these two varieties in the county owned by one breeder. These do not include any birds hatched prior to 1900.

Mr. Keller offers for sale fully one-half of these birds, and they are of the highest quality.

Mr. Keller informed me while at his place that every bird in the lot except two were bred by him. For good size, shape and standard color Mr. Keller's Wyandottes rank with the best in the land. *Chas. McClave.*

James K. Page, Indianola, Ill., is one of the Barred Rock breeders who can send out eggs with a clear conscience knowing that they will produce just what he claims in his advertisement that they will. He can and does satisfy his customers, because he has tbe right quality and his prices are reasonable. Our readers will find Mr. Page a very pleasant man with whom to do business.

Mr. Ira C. Keller of Prospect, Ohio, informs us tbat he has mated twenty-five pens of Golden and White Wyandottes and that they are made up of some of the finest specimens he has ever owned. These pens are headed by noted prize winners, scoring from 94 to 96½, and are mated to females, scoring from 93 to 97. He is well prepared to fill all orders promptly. His male birds are all winners at either the Ohio State Show, New York or Chicago.

Mr. A. H. Currier of Rockford, Ill., has been engaged to judge the Aurora and Catlin, Ill., shows next season. He will also officiate at several fall fairs, and has other engagements pending. He is recognized as a painstaking and competent judge of all varieties. He has been breeding Standard bred poultry since 1872 and is now bandling White and Buff Wyandottes and Rose Comb Black Bantams.

The Midland Poultry Food Co., of 418 Grand avenue, Kansas City, Mo., present to A. P. J. readers this month tbeir announcement regarding their splendid line of poultry food they manufacture. They claim the feed and not the breed is responsible for results. Their food is a balanced ration for fowls. Their book, "The Science of Poultry Feeding," will be sent to A. P. J. readers who will send for it.

*Editor American Poultry Journal.*

Dear Sir:—I showed three W. Langshans at the Wisconsin State Show held at Oshkosh, Wis. Received first hen, first pullet, also first and second ben at Broadhead, Wis. I have mated up my White Langshan pen, consisting of seven hens and pullets, with average score of 93. I have received a grand cockerel from Rees Matson to mate with these hens. My White Wyandotte pens consist of ten hens and pullets, scoring to 93, mated to a pure White Pierce cockerel. I guarantee a hatch of seven chicks in each sitting, or the sitting duplicated at half price.

I have received more inquiries and made more sales from my ad. in the AMERICAN POULTRY JOURNAL than any other paper I advertise in. Am looking forward to a good spring trade. Wishing you a prosperous season, I remain, yours truly, *S. H. Bird.*

CHAMBERLAIN'S CHICK FEED.

Chicago, Ill.

*Mr. W. F. Chamberlain, Kirkwood, Mo.*

Dear Sir:—In answer to your favor of October 6, will say we have been using your Chamberlain's Chick Feed since we opened up the Chicago Poultry Supply House, and during that time I presume we have sold twenty tons of it to the trade. We have some customers that have ordered from us as high as fifteen times; many of them from five to ten orders each, and we have failed to hear of one single instance where the purchasers were not entirely satisfied with the feed.

We have ourselves used it—feeding all of our young chickens with it that were hatched at the state fairs for the past six weeks, and so far we have never found anything that could take its place. The only objection to the feed is that it is a little high in price, but still when it is not wasted and care is taken in the feeding of it, a broiler can be raised at quite a large profit to the producer and with the absolute satisfaction and knowledge that you are going to have a healthy chick from start to finish.

I believe if the breeders as a rule knew how good this feed was and how far it could be trusted, that you could not manufacture enough of it in St. Louis to supply the trade. We shall give it more space in our catalogue for the coming season, and I am satisfied that our own trade here will more than double that of this year.

Your hen feed has not been so well introduced, but at the same time it has given good satisfaction, and as soon as the breeders around Chicago and those interested in our catalogue realize what you have, I believe that we will have as large a trade on that as we have had on the Chick Feed.

Wishing you success in the business, and thanking you for the prompt manner in which you have shipped the goods to us, we are, Very truly yours,

*The Cyphers Incubator Co.,*
*By Theo. Hewes.*

The old reliable seed house of James Vick's Sons, Box 1575, Rochester, N. Y., will send to any AMERICAN POULTRY

JOURNAL reader their new seed catalogue with full descriptions for spring planting. They can be relied on to furnish reliable seeds and all orders filled promptly.

### THE CYPHERS $12 OUTDOOR BROODER.

The following sample testimonials (note dates), telling of the good work done by the Cyphers $12 three-apartment, out-door brooders (see full page advertisement elsewhere in this issue) are sent us for publication by the Cyphers Incubator Company:

Middletown, N. Y., Apr. 4, 1901.
Cyphers Incubator Co.

The three Style A brooders came to hand, and after a good, thorough trial I must give you the credit of making the best brooder there is on the market. I also use fifteen ——— ——— brooders, but I prefer the Cyphers. Yours very truly, *Henry B. Wisner.*

New Hamburg, N. Y., Apr. 5, 1901.
Cyphers Incubator Co.

I have one of your incubators and lately ordered three of your Style A outdoor brooders. No other make of incubators or brooders can come up to those you manufacture. Your incubator is perfect, giving me, for the first hatch, a big flock of the finest and strongest chickens I ever saw. Today they are almost three weeks old and another hatch is just about due. The non-moisture feature of the Cyphers incubator is perfect and so is your regulator. There is no trouble at all to run your incubator, in fact, it runs itself. Your outside brooders are perfect and I must say you do not print one word in praise of your incubators and brooders more than they deserve. They are perfect and you are at liberty to use my name to this effect. Yours faithfully,

*Andrew May.*
Foreman for R. W. Rives, Esq., Carmouth Farm.

Berrysburg, Pa., Apr. 6, 1901.
Cyphers Incubator Co.

My first hatch was due Monday, April 1, and the results were elegant. I obtained 168 hardy chicks from 225 untested eggs, and I must say they are the hardiest I ever hatched. They are now in my Cyphers outdoor brooder, which is very easy to handle. It does its work perfectly and by next year I shall have more of these brooders. I find them just the thing for this time of year. Yours, truly, *U. S. Daniels.*

For 224-page, finely illustrated catalog of the Cyphers incubators and brooders send 10 cents to pay postage and address nearest office of the Cyphers Incubator Co.

Boston, Mass., 34 Merchants Row.
New York City, 8 Park Place.

Mrs. E. J. Reynolds, of Haskells, Ind., wishes us to say that the description of her Buff Rock cock bird, Roman Emperor, cut of which appeared in the April number, was slightly in error. The bird is owned by Mrs. Reynolds, but is a line bred bird, bred and raised by H. L. Burdick, of Rome, N. Y., who has now retired from business. Roman Emperor's weight is 11 pounds. His sire was Roman Chief, grand sire Roman First, great grand sire "Doubloon." Mrs. Reynolds states that he is an "even golden buff of one even shade all over, with clean flights and buff tail. Under color solid, of same or deeper shade than surface. He won 2nd at Philadelphia, December, 1899; 3rd at Chicago, January, 1901, eight birds in competition. He is a grand breeding bird and is the sire of many prize winners shown in the same classes with him." He is owned and was exhibited at Chicago by Mrs. Reynolds, who has refused large offers for him at every show at which she has exhibited him. She breeds "Burdicks Nuggets" pure, which is one of the greatest strains of prize winning Buff Rocks in the world. Following are some of the testimonials she has received from customers:

PLYMOUTH, IND., March 15, 1901.
*Mrs. E. I. Reynolds, Haskells, Ind.*

DEAR MADAM: The hen arrived in good condition. Please accept my thanks. I am as well pleased with her as I was with the cockerel you sent me in December. They are both dandies and well worth the money. Any one wishing good Buff Rock stock will make no mistake by sending their money to you. Yours respectfully, *H. A. Armstrong.*

RICHMOND, MO., March 11, 1901.
*Mrs. E. I. Reynolds, Haskells, Ind.*

DEAR MADAM: I received the cockerel you shipped me. He came in good shape, and I am well pleased with him. You can book my order for two settings of eggs, to be delivered April 10. Yours sincerely, *M. H. Cary.*

J. W. Grier, of Coldwater, Ohio, has a prize winning strain of White Plymouth Rocks that he has had success with for a great many seasons. Just now he

**M. RUMELY CO., LA PORTE, IND.**

is filling egg orders and with every order goes a guarantee to please customers. The fact that he has never received a complaint from an old customer is a guarantee of good treatment. His stock is all that he claims for it and will surely be satisfactory. As an extra inducement he has made a reduction in the price of eggs.

Mr. William F. Brace, Victor, N. Y., won twelve prizes at Rochester, N. Y., on his Single Comb Brown Leghorns, including first pen and American Leghorn Club special for best colored male; also for best shaped pullet. Mr. Brace's Leghorns never fail to win both in his hands and those of customers.

Mr. Paul B. Harshman of Sullivan, Ill., one of our oldest advertisers, reports an unusually successful season. He declined to sell any of his prize winners, preferring to give his egg customers the benefit of receiving eggs from his best birds and for this reason he is in excellent position to satisfy those who entrust their orders with him. His eggs are hatching well and he has gotten out a large number of youngsters which will win for him and his customers next season.

STEINMESCH CHICK FEED IN PHILADELPHIA, PA.

In order to take care promptly of the large demand for *Steinmesch Chick Feed* we have appointed Mr. Henry F. Michel, wholesale and retail seeds, bulbs, garden implements and poultry supplies, No. 1018 Market street, Philadelphia, Pa., as our agents. Mr. Michel is a live, wideawake merchant, who will promptly and carefully take care of all orders entrusted to him. Steinmesch Chick Feed is sold in Philadelphia, Pa., at St. Louis prices, $2.50 per 100 lbs.

George M. Leffel, of Springfield, Ohio, the Barred Plymouth Rock breeder, makes the important announcement that he will after May 15 sell 250 of his winners to make room for his young stock. We say this is an important announcement, for it is and more so to any Barred Plymouth Rock breeder who wishes to get stock for his own use.

Mr. T. L. Williams of New Albany, Ind., is now in position to give his egg customers extra value for their money. His 96 and 96½ point females are all in his breeding pens and are mated to high scoring male birds. Eggs from these matings are bound to produce satisfactory results, and Mr. Williams' reputation for prompt shipment and fair dealing has brought him a large trade this season.

Pleased customers are the best recommendation a fancier can present to the public. The following will illustrate the kind of stock sent out by F. C. Bailey, Reading, Mich., the Buff Rock breeder:

Owosso, Mich., January 7, 1901.

"I came out better than I expected with the birds you sent me, winning first and third cockerel, 92½ and 92, and second pullet, 95 points. I thank you very much for the way you have used me.

*"A. J. Bertrand."*

Note Mr. Bailey's new advertisement in this issue.

B. Howard Whitcomb of the famous Red Ear Stock Farm, reports he is having a fine trade, and is selling eggs from his prize winning birds for about one-half what they are worth, quality con-

sidered. If you are needing any new blood now is the time to send in your order for eggs from vigorous farm raised poultry. Look up the winnings of the Red Ear Stock Farm.

C. H. Danforth, of Batavia, Ill., says that he is breeding from six pens of extra fine White Wyandottes, all headed by snow white males, bred from his Chicago winners, from which he is now selling choice selection of eggs at reasonable rates. By referring to his ad. prices can be learned for same.

### A VALUABLE PREPARATION FOR EVERY FARMER.

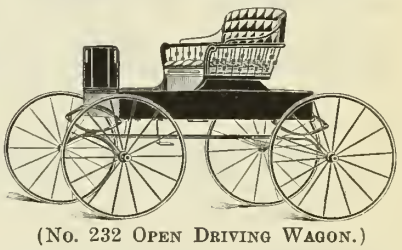
The most radical remedy against chicken lice and the best wood-preserving paint is "Avenarius Carbolineum." The farmers all over the country count among their heaviest expenses to run the farm the lumber bill. All are undoubtedly interested to learn of a medium to reduce same at least to half its former cost. This medium is "Avenarius Carbolineum," a wood-preserving paint based on thirty years' experience. Many are of the opinion that paint, tar and linseed oil preserve the wood against rot and decay. Such coatings, however, only form an airtight cover, but do not destroy the albuminous parts of the wood which always start the rot. Paint, tar and oil prevent the evaporation of the wood, and the consequence is dry-rot. Avenarius Carbolineum, on the contrary, penetrates deeply into the wood and destroys all present decay matter. It is used on the farm for painting barns, granaries, silos, shingles, posts, bridges, chicken-coops, etc., and all woodwork above and below the ground. Avenarius Carbolineum is also the most radical remedy against chicken lice. If you want plenty of eggs and healthy chickens the chickens must be free from lice and mites. Avenarius Carbolineum will keep this plague away from your hen-house. One coat applied to the inside of your chicken-coop will keep it clean from vermin, and kerosining, white-washing and the use of sulphur will be done away with.

For further information, circulars, etc., address the Carbolineum Wood-Preserving Co., Milwaukee, Wis.

We are very glad to call the attention of our readers to the Harry N. Hammond Seed Co. of Bay City, Mich., who have been advertising in these columns for some time past. Very many of our readers will remember when Harry N. Hammond started growing and selling seeds in a comparatively small way at Fifield, Mich. At this point the business grew to large proportions when an almost overwhelming calamity befell their business in the shape of fire about a year ago, which destroyed their warehouses. This blow would have probably crushed out the ambition of most business men, but with commendable pluck and enterprise Mr. Hammond decided to re-establish his business on an even broader and more substantial basis than ever. Realizing that it would be an advantage to have his warehouses and shipping business in a larger city, he incorporated his company and located at Bay City, where large and commodious buildings were erected for his use. The above illustration shows the quarters now occupied by the Harry N. Hammond Seed Co. These people issue a very complete catalogue, which we will be glad to have our readers write for if they have not already done so. In writing please mention this paper.

### AFTER 28 YEARS.

We are not much in sympathy with advertisers who make use of extravagant claims as being "biggest," the "best on earth," "none so good," etc. When, however, these or similar claims are borne out by the actual facts we believe that the advertiser has not only a perfect right, but that he should make the facts public. This is brought to mind by the advertisement of the Elkhart Carriage



(No. 232 Open Driving Wagon.)

and Harness Manufacturing Company, of Elkhart, Ind., who regularly use this paper in season. These people for the past several years have been laying claim to being "the largest manufacturers of vehicles and harness in the world selling to the consumer exclusively." To one who will take the pains to investigate, or what is better still, if it is possible, go to Elkhart and look over this institution and examine their methods of doing business, this statement will appear as modest and entirely within the bounds of truth. Of course this result is not one of sudden attainment; it has taken more than 28 years of hard and persistent effort to bring this institution up to its present high plane. Having decided long ago that the public would much prefer to deal direct with the manufacturer, the man who made the goods, if the people but could be convinced that they were

getting the best goods at the lowest procurable price, the Elkhart people inaugurated their present system of doing business. That their methods have been approved and appreciated is evidenced by the growth, magnitude and prestige of their present business. In their two large factories at Elkhart they manufacture 178 styles of vehicles and 65 styles of harness. In vehicles they are prepared to supply the public with every conceivable article from the open buggy through, phaetons, stanhopes, a long line of top buggies, surreys, two and three seated carriages, traps, spring wagons, etc., to wagonettes, busses and all classes of delivery wagons. In harness they have anything from single strap buggy harness all down the line to best double team harness for farm work. Remember that they make every article they sell in their own factories and that they employ no agents or middle men, but sell exclusively to the consumer at wholesale prices. Every article is guaranteed in a way that removes all element of chance. Everything is made of good material in the most substantial way, in the best and latest style and sold to the consumer at the most reasonable of prices. Write them for their large illustrated catalogue which they will take pleasure in sending to our readers free.

## AN ORIGINAL IDEA.

The Cypress Incubator Company, western office at 325 Dearborn street, Chicago, Ill., gave a free exhibition of their machines in operation during the entire week preceding Easter Sunday. Their western manager, Mr. Theo. Hewes, leased a show room on the ground floor at 300 Dearborn street and had all four sizes of machines filled with eggs so they began hatching on Tuesday and continued until Friday. Over six hundred eggs were hatched, placed in the brooders and allowed to remain there during the week. Thousands of people saw the exhibit, many of them never having seen an incubator in operation before, and the interest created in this way is a great educator for the general public.

The Cypress Incubator Company with their up-to-date ideas are doing a grand good work for artificial incubating. Their incubators and brooders will stand the closest inspection. In addition to their incubators and brooders, they have one of the largest poultry supply houses in the United States, where every up-to-date article required in the equipment of a first class poultry plant can be secured and at prices in keeping with the quality of the goods.

Their large catalogue for 1901, containing 224 pages of interesting reading matter together with complete description of their non-moisture, self-regulating machine, will be mailed for ten cents. This is less than the cost of postage required for mailing. In writing them, ask for Book No. 5.

## LOSS OF WEIGHT IN EGGS DURING INCUBATION.

Under the above title the West Virginia Agricultural Experiment Station has issued Bulletin No. 73, which will be sent to all poultrymen sufficiently interested to write for a copy.

The object of this bulletin is to furnish sufficient data to enable the operators of incubators to exercise a more intelligent supervision over the operation of their machines. A number of experiments have been performed to determine the normal loss in the weight of eggs during incubation, and for this purpose the natural method of hatching has been employed. Eggs have been weighed, placed under broody hens in locations suitable for a perfect hatch, re-weighed on a chemical balance at suitable intervals, and the loss determined.

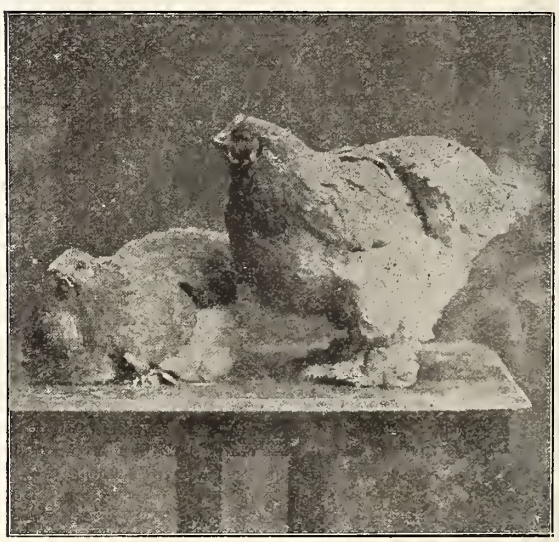
The Wisconsin State Poultry Association will hold its fifth annual show at Oshkosh, Wis., the last week in January, 1902. A. B. Shauer will judge the poultry exhibit. Three new silver cups will be given by members of the association of Oshkosh. The last show was the largest ever held in the state, and was a financial success. Information will be given by addressing the secretary and treasurer. *Earl Heath.*

## CUBAN FOWLS.

*Editor American Poultry Journal.*

In your April issue, under the head of Cuban Fowls, the gentleman from Belleville, Ontario, would like to know what breed of fowls he has mentioned. In my opinion they are the (blue) Andalusians, of which there are a great many in that country. Also the largest game pits I ever saw, but upon the arrival of the American troops in 1898, they diminished a great deal in numbers. Some of the American troops upon their debarkation from the island brought some of the Andalusians with them. Their eggs are unusually large for so small a bird, but the ones you refer to are unusually large for any bird. Yours truly, *Leo. G. Brewer.*

*Owosso, Mich.*



The above illustration is a half-tone reproduction of Model Fourth and daughter, two of Mr. William Webb's prize winning Buff Cochins. They are in his breeding pen No. 1 for this season. They are first hen and first prize pullet at Mazon, Ill., and Joliet, Ill., scoring 94½ and 95, by Russell. Model Fourth is a winner of three firsts and two sweepstakes, scoring from 94½ to 95½. She was bred from a long line of ancestors, which were Chicago winners. Model first was a winner of eleven first prizes at such shows as Chicago, Bloomington, Ill., Springfield, Ill., and others, scoring 96 points. These birds are all bred and owned by William Webb, Joliet, Ill.

# News and Announcements of Poultry Associations and Specialty Clubs.

The fourth annual show of the Central Ohio Fanciers' Association will be held Dec. 26 to Jan. 2 at Columbus, Ohio. This show has always been acknowledged to be one of the best shows for birds to change hands. Exhibitors, take this in consideration when booking your next shows. Following are the officers: J. C. Underwood, president; H. P. Maughlin, first vice president; Joseph T. Pace, second vice president; F. A. Brigel, secretary; E. R. Dunn, treasurer.

Webster City, Iowa, now has the assurance of a grand poultry show, which will take place some time the fore part of January, 1902. The Webster City Poultry Association has been in existence scarcely two weeks at this meeting, March 16, and we now have $80 in cash at our command. We believe the effort will meet sucess on every hand, and respectfully solicit the aid of all outside fanciers and breeders. Following is a list of the officers: G. H. Daniels, president; James Follett, vice president; C. B. Mason, second vice president; Fred Hahne, secretary; G. T. Adams, treasurer, and J. E. Young, superintendent. Our membership fee is $1, and all are invited to join. Very respectfully,

*Fred Hahne, Secretary.*

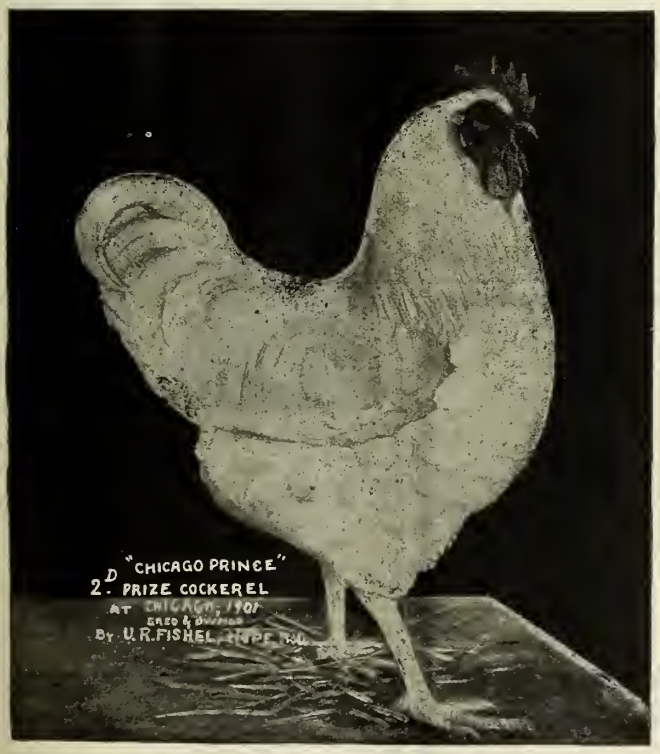
The Detroit Poultry, Pigeon and Pet Stock Club has been formally organized and more than a hundred men, prominent among the breeders of such stock in Detroit, joined the club. The club was formed to promote the breeding of poultry in Detroit and Michigan, and it is proposed to give poultry shows each year that shall rival in importance those of Chicago and New York. The club aims to attract society people and these annual events will be made society events, the officers say.

A. H. Zenrer was elected president. Edward Donnelly, of Sandwich, was chosen first vice-president, and William I. MacDougall was elected second vice-president. W. Mercer was chosen secretary and John A. Seely treasurer. The executive committee of the new organization will be composed of one representative from each class of breeders, as follows: Plymouth Rock, Wyandotte, Leghorn, Cochin, Brahma, bantam, pigeons, Belgian hares and cats. This will prevent the representatives of one class favoring their own class.

The meetings of the club will be held in the Griswold House parlors.

## DAYTON IN LINE.

The fanciers of Dayton, Ohio, are getting into line and intend to hold a first-class show during the first week in January, 1902. For several years Dayton fanciers, or a few of them, have been



# Eggs from Fishel's White Plymouth Rocks

# Hatch Winners.

Below I give a few of the many testimonials I have received from parties who bought eggs of me last season. Hardly a show of any note held in the United States or Canada but what FISHEL'S WHITE ROCKS were in the money. Others can rear winners from eggs from my yards, why can't you?

ARROWHEAD SPRINGS, CAL., Feb. 12, 1901.

U. R. FISHEL, Hope, Ind.

Dear Sir:—I exhibited White Rocks at the 20th Century Poul- Show, Los Angeles, recently and won 1st cockerel, 2d pullet, 3d hen. My cockerel was the finest exhibited on the Coast. He is a beauty; almost perfect in shape and as white as snow. He scored 96½. There was a strong class of White Rocks, and many claimed to have better birds than U. R. Fishel and would not send to him for eggs, etc. Many came to me and asked where I got my birds. I told them that I hatched them from eggs I bought of U. R. Fishel and the third prize hen I bought direct of you. I will send my cockerel against anything in the United States and I am sure he will come home a winner. It surely pays to buy eggs of you. Respectfuily,

S. M. BUNTLER.

ATLANTA, GA., Feb. 9, 1901,

U. R. FISHEL, Hope, Ind.

Dear Sir:—I sent my birds to Macon Show this week and won 1st cockerel, 1st and 2d pullet, 1st pen and silver cup for highest scoring pen in American class. Thought you would like to know of my success. Respectfully, J. K. OTHLEY.

MOLINE, MASS., Feb. 7, 1901.

MR. U. R. FISHEL, Hope, Ind.

My Dear Sir:—From the eggs I bought of you last season I showed the birds at our show. There were 93 White Rocks in the class—10 pens, 19 cockerels, 18 pullets, 20 hens and 6 cocks. I won 1st cock, 1st cockerel, 1st and 2d pullet, 1st and special for the two highest scoring Plymouth Rocks. The 1st cockerel and 1st and 2d pullets are out of the eggs you sent me last May. The cockerel weighed 9½ pounds, the pullet 8 pounds. They have good bone, wide breasts, short tails, etc. I am more than pleased. Respectfully, PETER KOOLER.

## The General Utility Fowl of the Twentieth Century.

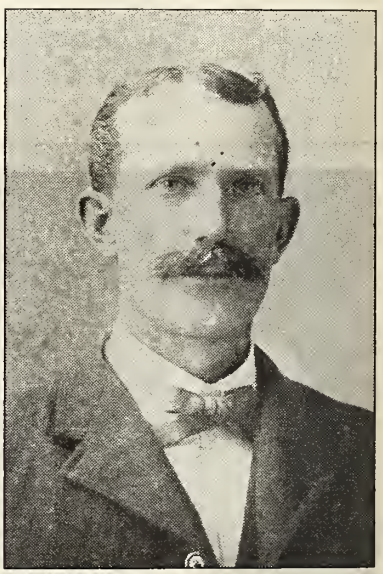
Our WINNINGS the PRESENT year demonstrate without a doubt that we have MORE PRIZE WINNERS than any breeder in the country. Having won in 1900 nine firsts and sweepstakes for best male, Concord State Fair, Concord, N. H. Eight firsts and one second, nine entries at Brockton Show. Two firsts and special for best R. I. Red male bird in Fall River. Six first prizes, six entries, Malden, Mass. Forty-two prizes Philadelphia, including the special offer of $50 in gold and $25 in gold, also including nine firsts and nine seconds out of a possible ten each.

**1901**

Boston Show in the hottest competition. Forty-eight prizes, including four firsts, three seconds and eighteen specials. At New York, seven firsts and five seconds, which is a result unequalled by any breeder of any variety of any fowl. If you desire to obtain stock from the very best that there is, state what you want and write us for quotations.

**HOUSE ROCK POULTRY FARM,**
**Wollaston, Mass.**

content to hold a small local show. But the large and successful shows which Indianapolis, Cleveland and Pittsburg have held during the past year have had the effect of stirring up the fanciers of southern Ohio and the result is the Dayton Fanciers' Club, with a capital stock of $500, divided into 100 shares of $5 each. Almost all of the shares have been sold and the money paid in. A large, first-class and centrally located show room will be secured. The show will be cooped free of charge by the club. Liberal premiums paid, over 200 gold specials offered and fair and impartial treatment will be given to each and every exhibitor. Judge F. B. Zimmer will judge the show, assisted by other prominent judges to be announced later. The score card method will be used. Every breeder is invited



The above cut is an excellent likeness of Mr. I. T. Bryant, the Buff Rock specialist of Oxford, Ohio, and treasurer of the Butler County Poultry and P. S. Association of Hamilton, Ontario. Six years ago he started breeding Buff Rocks by purchasing stock direct from H. S. Burdick. He has been very successful in the show room during the past years having won a majority of the premiums wherever he has exhibited. He has four yards mated this season from which he expects grand results. He is breeding from one solid buff cockrel, which is overweight and which Mr. Bryant states is the best Buff Rock he ever saw, and he has handled a great many. Those of our readers who wish to raise some prize winning Buff Rocks should correspond with Mr. Bryant with a view to procuring eggs, which he is selling at $2 per fifteen.

to show with us. It will pay you in money, in sales and in extending your reputation among the breeders of the middle west. Don't forget the date and the association holding the show—the Dayton Fanciers' Club, Oliver L. Dosch, secretary.

### THE PHILADELPHIA SHOW.

PHILADELPHIA, Pa., April 20, 1901.
*Editor American Poultry Journal.*
DEAR SIR: It gives me pleasure to

inform you that the Keystone Poultry, Pigeon and Pet Stock Association's next show will open on Dec. 28 and continue until Jan. 2, inclusive, and I am also very glad to be able to announce to the public tbat we have secured the Auditorium Hall of the Philadelphia Museum. This is the hall in which tne late Republican National Convention was held and is 300 feet square, having the very best overbead and side lights imaginable. I am preparing for tbe largest show ever beld in America, and our specials, we hope, will be larger than were ever given before by any poultry association in this country. No stone will be left unturned to make it an attractive show, and to bring together everything of interest, and we also hope to give a great dressed poultry exhibit. Quite a number of tbe specialty clubs have agreed to hold their meetings in Philadelphia, and if any fanciers desiring information during the summer and fall regarding the Philadelphia show will address me as secretary, No. 720 Girard Building, I will cheerfully furnish any information that is within my power. I hope your valued paper will give notice of the time of our meeting and the hall in wbich the show is to be held, and also that your paper will be with us, as we can this year give you all the space you may desire for exhibiting the same. I remain,

Yours very truly,

*James Cheston, Jr.*
Secretary and Treasurer.

———o———

## MICHIGAN STATE POULTRY AND PIGEON ASSOCIATION.

At the annual meeting of the Micbigan State Poultry and Pigeon Association, beld in Detroit, the following officers were elected: President, E. C. Hungerford, Concord; vice presidents, H. R. Kingman, Battle Creek; Chris Wagner, Detroit; W. T. P. Burton, Detroit; treasurer, W. R. Wooden, Battle Creek; secretary, L. G. Nichols, Battle Creek. Executive committee, G. S. Barnes, Battle Creek; F. W. McKenzie, Concord; B. H. Wbite, Battle Creek; B. H. Smith, Coldwater; John C. Stellwagen, Wayne; Jacob Baumann, Detroit; Thomas Jeuner, Detroit; M. D. Cole, Romeo; J. M. Williams, North Adams; John A. Grover, Concord.

The next sbow will be held in Battle Creek, Jan. 7-10, 1902. The association has secured James A. Tucker and Sharp Butterfield to do the judging, and every effort will be made to make this the best show ever held in the state.

Tbe Michigan Fanciers' Association, which held one of the most successful poultry exhibitions last year, will not hold an independent show this year, but will join with the Michigan State Poultry and Pigeon Association in making the next sbow, at Battle Creek, Mich., Jan. 7-10, one of tbe grandest exhibitions in the West.

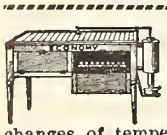
**MRS. J. A. RIGG, Iowa Falls, Iowa.**



**—ECONOMY— Incubators and Brooders.**

Hatches all fertile eggs. Absolutely automatic. Saves oil. Constructed so it is not affected by sudden changes of temperature. It is all that the name implies. Send for circulars.

**ECONOMY INCUBATOR AND BROODER CO., Box 5, Augusta, Mich.**

J. Glenny, E. S. Hull, H. O. Barker, A. Alonzo, Major H. H. Baker, R. J. Le Garden, Louis Claudel, Jno. A. Harris, W. A. Gogrene and the above officers.

The association was organized on July 13, 1900, and has been growing since. We now have a membership of 78. We held our first exhibition during Mardi Gras week and it was a big success from every standpoint. We will hold our next show earlier in the season, and if it is not a second edition of the Madison Square Garden or Boston shows, it will not be the fault of the officers or executive committee. Standard bred poultry has taken a firm hold here, and as soon as we hear of an attack of the fever we go right after it. I tell you, it is dangerous for anyone to talk "chicken," for as soon as one does we yank him into the association, and then he becomes a full fledged crank. The poultry industry has been sadly neglected here and we are determined to place it just where it belongs—right on top.

Wishing you and the A. P. J. the abundant success you deserve, I am, very respectfully, *A. Magnitzky,*

5321 Camp Street (after May 1, 1412 Octavia Street), New Orleans, La.

## NEW JERSEY POULTRY, P. P. & P. S. ASSN.

TRENTON, N. J., April 18, 1901.

*Editor American Poultry Journal.*

DEAR SIR: At the last regular meeting of the New Jersey Poultry, Pigeon and Pet Stock Association the following officers were elected for the ensuing year: President, Charles Durling, Hopewell; secretary, W. S. Gladney, Jr., Trenton; assistant secretary, G. W. Pearson, Jr., Trenton; treasurer, E. T. McGalliard, White Horse; superintendent, George B. Randolph, Weston; assistant superintendent, W. S. Baldwin, Trenton. It was decided to hold the annual show at Trenton, Dec. 10 to 14. Liberal cash specials will be offered and the best judges procurable will be engaged.

The association expects to make this the largest and best show ever held in New Jersey and will offer more cash specials than any association in the east outside of Boston, New York and Philadelphia. Entries will close Nov. 25.

*Walter S. Gladner, Jr.*, Secretary.

## THE AMERICAN POLISH CLUB.

The first annual meeting of the American Polish Club was held in Old City Hall, Pittsburg, Pa., on Thursday, Feb. 21, 1901.

The election of officers resulted as follows, Secretary Caldwell voting the proxies: President, J. W. Bruckart, Lititz, Pa.; general vice-president, Chas. L. Seeley, Afton, N. Y.; secretary and treasurer, M. V. Caldwell, Leetonia, O.; state vice-presidents, Ohio, Mrs. Austin G. Stultz; Pennsylvania, Will J. Kelly; Connecticut, W. H. Card; Massachusetts, E. A. Howe; New Jersey, Chris. Kirschler; Illinois, John Homer; New York, G. Archie Turner; Washington, D. C., A. L. Gardner; executive committee, J. W. Bruckart, M. V. Caldwell, Chas. L. Seeley, W. H. Card, John Homer, A. L. Gardner, Mrs. Austin G. Stultz, Wick Hathaway, Will J. Kelly.

Secretary Caldwell had proposed and read a constitution and by-laws modeled after the White Rock Club, which was adopted.

It was moved and seconded that the secretary have 1,000 copies of the Polish

ADDRESS, ROYCROFT STOCK FARM,
(where we breed chickens and things)
1453 WOODLAND AVENUE, DES MOINES, IOWA.

the year. Under their able management Burlington will hold one of the largest and most interesting exhibits of poultry, dogs and pet stock ever held in northern New England.

At a meeting of the directors at an early date the time of the exhibition will be decided upon and judges for the different departments selected.

The exhibition will be the ninth annual one held by the state association previous ones being held at Woodstock and other towns in the eastern part of the state. The following officers were chosen. They will be ratified at an early meeting:

President, F. E. Perkins, Burlington; vice presidents, J. W. Jones, Burlington; J. S. Eaton, Woodstock; W. E. Mack, Woodstock; F. C. Brown, Quechee; M. A. Jenkins, Bradford; C. C. Paine, Randolph; Dr. C. A. Gale, Rutland; George W. Chaffee, Rutland; J. L. Winchell, Fair Haven; Dr. Sheldon, Middlebury; Dr. Joe W. Jackson, Barre; H. F. Brush, Milton; H. M. Barrett, St. Albans; H. D. Hopkins, Montpelier; E. F. Gibhart, Shelburne; E. E. Dearborn, Shelburn; W. E. Ferguson, Williston; Warner Bingham, W. Concord; P. J. Blair, Plattsburgh; W. H. Murdock, Burlington; Secretary, B. B. Beeman, Burlington; assistant secretary, Charles H. Mower, Burlington; treasurer, William E. Weller, Burlington.

—o—

The Ft. Black Poultry & P. S. Association will give their first annual show Dec. 17 to 20, 1901, with Thomas F. Rigg as judge.

Every effort will be put forth to make this show a "howling" success.

A. C. CARNEY, Secretary.

White Plymouth Rock hen, first prize at Cincinnati, 1900. Owned by W. A. Greene, New Albany, Ind.

The Wenona Poultry and Pet Stock Association will hold its fourth annual exhibit at Wenona, Ill., Dec. 16 to 21, 1901. Judge D. T. Heimlich will place the ribbons.

*U. G. McAdam,*
Recording Secretary.
*O. A. Axline,*
Corresponding Secretary.

F. H. Hereford & Son, Fulton, Mo., are exclusive breeders of S. C. B. Minorcas and Rufus Red Belgian Hares. They are men of the greatest reliability and will do as they agree. Their rates for eggs are reasonable and Minorca breeders should correspond with them at once to insure filling of orders for eggs.

# Natural Hen Brooder, $5, $8, $10 and $15.

***The following reports are coming every day from Large Poultry Raisers:***

"Send by express, at once, ½ dozen brooders. We have given one of your brooders a trial. We must have them at once. We want to save the chicks. Your Brooder beats all tried by far."

***Send 10c or Stamps for Catalogue of Brooders.***

## *Three Customers Letters for April, 1901.*

CURTIS & CO., Ransomville, New York.
THE LARGEST POULTRY FARM IN NEW YORK STATE.
Mr. Jno. M. Sontag, Pres. of Natural Hen Brooder Co., St. Charles, Ill.
Dear Sir:—Your two No. 3 Brooders arrived. We like your brooders. We are using your brooders for nurseries. This explains all. In fact, it does the best of any we have had. We want your heating system in fall for our Brooder Houses. We expect to order more by telegram at once. Be ready to ship ½ doz. Give us prices on one dozen lots.
Yours, W. R. CURTIS & CO.

———

Puxico, Mo., 3, 15, 1901.
Mr. Sontag.
Dear Sir;—Please send us your heating system for one 60-foot brooder house. We have ½ dozen of your brooders and we are so well pleased that we now want your system for brooder house. Ship at once and send the bill and I will remit.
CLARENCE E. REED.

———

POULTRY RANCH, Stockton, Cal., April 1st,
Jno. M. Sontag, Pres. N. H. B. Co., St. Charles, Ill.
Dear Sir:—Inclosed find ——— for which please send us a once ½ dozen brooders. Your No. 3 Brooder is giving great satisfaction. Just as you represented it. Hence our order for ½ doz. No. 3. Nearest to hen brooder made.
Truly yours, THEO. KNEPPERS.

# A New Book, Price $2.50.

We have seen samples of Mr. Hudson's printing. It is very nice. He is perfectly honest.—EDITOR.

## LEE'S EGG MAKER AND LICE KILLER.

The Geo. H. Lee Co., agricultural chemists of Omaha, Neb., are so well and favorably known as makers of standard poultry and stock preparations that any article bearing their name can be depended on as sure to fulfill its maker's promises. The Lee Co. receive constantly most flattering testimonials, a few of which are given below. We feel sure our readers will be interested in noting what others say who have used and tested these goods. It will be noticed that the letters given below all bear recent dates and most of them are from parties who have used the Lee goods for several years.

"Burlingame, Kan., March 4, 1901.

"We have used Lee's Lice Killer and think it the best thing of the kind ever invented. *Miss Olive A. Barnes.*"

"Wapello, Iowa, March 6, 1901.

"Any second order to you is proof that I am satisfied. It is a good thing (Lee's Hog Remedy). *W. C. Herrick.*"

"Liberty, Mo., March 7, 1901.

"I must acknowledge I have never had anything yet, since I have quit handling that, that has ever taken the place of Lee's Lice Killer. I have calls time and again and letters, not a few wanting the same. *Mrs. Ellis.*"

"Elroy, Ill., Feb. 22, 1901.

"I have used your Lee's Lice Killer for two years, but last year I thought I would try some other kind, and I found out that the Lee's Lice Killer is ahead of all other lice killers.

*"Mr. W. Seidell."*

"Mirroson, Iowa, Feb. 9, 1901.

"I have used your lice killer for two seasons, and I think it's the best I ever tried. Have had good success with my poultry for two years.

*"Mrs. W. E. Toogood."*

In a recent letter Mr. Lee writes as follows: "We are in the business for keeps. We want every package we sell to sell others, and you know as we do that the only way to accomplish this is by seeing that every package is O. K. We have learned a few things about making lice killers in six years. We had a good thing at the start but a better one now, more uniform and thoroughly reliable. Our Hog Remedy, although only an infant, is a hummer. We have already sold over 20,000 25-pound pails and 100-pound boxes. Lee's Egg Maker and Chicken Medicine is going well; it is just what its name implies. It stimulates egg production and keeps the chicks and fowls thrifty and vigorous. It is simply a preparation of nature's forces to overcome artificial conditions, and insures at all times a proper supply of meat food, salt, herbs, condiments and other properties which fowls need but rarely get. The above goods are regularly advertised in these columns and can be bought from the Geo. H. Lee Co., Omaha, Neb., at which point their laboratories and factories are located, or from their eastern supply house, No. 8 Park place, New York City. Please refer to their ad on another page and write them for full particulars, mentioning this publication.

———o———

Dr. H. D. Manchester, chairman of the Advertising Committee of the Peoria Fanciers' Association, informs us that the seventh annual exhibition of this association will be held at Peoria, Ill., Dec. 27, 1901, to Jan. 1, 1902, inclusive. Theo. Hewes will place the awards.

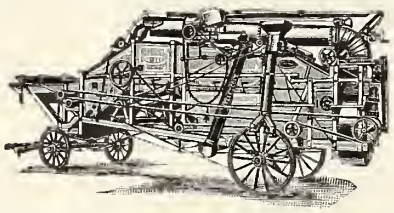
## THE FARM AND THE THRESHER.

The man who owns and operates a threshing outfit is not the only one who should study and look into the merits of threshing machines. If there is any one man above another who should be interested in the capabilities and the quality of work a threshing machine will do that man is the farmer. If a machine be only limited in capacity and is pushed beyond its limit the grain will be "hogged" or poorly threshed and cleaned, and the farmer is the loser. If the machine be flimsily constructed, or if the engine is of too light capacity, breaks and delays will occur, and with a big gang of threshers on his hands the farmer is again the loser. Certainly then, when you have a job of threshing to do the safe plan is to select or employ a machine of such well-known make and ability as to avoid all these vexatious delays and losses. As a type of this best class of threshers we illustrate herewith the new Rumely thresher, which is manufactured by the M. Rumely Co., of La Porte, Ind. These threshers have a most enviable reputation for threshing



and cleaning ability, large capacity, durability and earning ability. They are equipped and provided with every improvement and time and labor saving device known to thresher art; i. e., self feeders, band cutters, grain weighers, grain baggers, high elevators, elevators with cross conveyors, etc. The Rumely engines, which are made for burning with wood and coal or both, straw, etc., are phenomenal for their strength and durability, and further for the fact that they always develop greater than their accredited power. They are remarkably easy and quick steamers and are economical of fuel. Their traction power is simply enormous and they take the entire outfit anywhere over any kind of road. The separators can be equipped with Uncle Tom Wind Stacker or the Sattley Attached Stacker or the Independent Swinging Stacker, as desired by the buyer. All machines of every kind and all attachments are made of the very best material and in the most workmanlike manner. If interested in threshing machinery in any way it will pay you to see a Rumely catalogue. Write the M. Rumely Co., La Porte, Ind., today, and they will take pleasure in mailing you one free.

J. D. Keyworth, formerly located at Evanston, Ill., where he carried on a fine poultry business, has decided to move back to his old home at Sandy Hill, N. Y., and will continue the business under the name of Keyworth Bros. All of his old friends and patrons should remember this change of address and there is no reason why he will not be successful there in his new location and be heard of in the shows of the east. The new firm will breed Golden Buff Plymouth Rocks and will do a still larger business than ever before. Their stock has won many prizes at Chicago, Indianapolis, and Wisconsin and Illinois state fairs.

**SHERIDAN'S CONDITION POWDER**

Will keep chickens strong and healthy; make your pullets lay early; is worth its weight in gold for molting hens. Costs one-tenth ct. a day pr. hen One pack 25 cts; five $1. Large 2 lb. can $1.20. Six $5, prepaid. Sample of best poultry paper sent free. I. S. JOHNSON & CO., Boston, Mass.

**BUFF PLYMOUTH ROCKS**

CLIFFORD W. BEMAN, N.Y.

PORT DICKINSON.

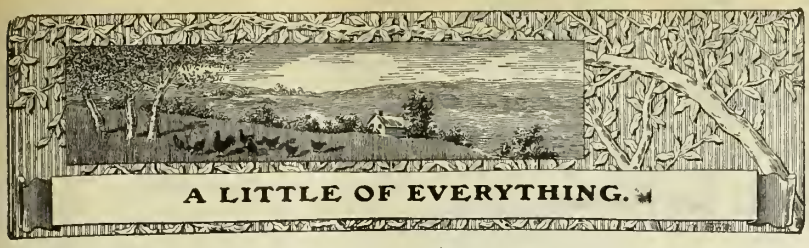
**Delaware, N. J.**



## A LITTLE OF EVERYTHING.

*Light Weights and Heavy Weights.*

Perhaps the weight question as regards all breeds of chickens subject to weight requirements could be conveniently settled by making heavy and light weight divisions of each breed, leaving symmetry and other fancy points as they are. Then breeders could raise heavy or light weights to suit themselves and every breed would be more popular. There are people who cannot raise very heavy weights who would like to raise standard chickens of the varieties which are likely to be bred to excessive weight.

*Madison, Wis.* *J. W. Scott.*

*Crowding Young Stock for Weight.*

We have used cracker waste ourselves when crowding young stock, mixed with other food and moistened with milk, to advantage. We have found it advantageous in crowding exhibition stock up to the weights required by the American Standard of Perfection, to use black molasses, sorghum and brown sugar, but where it is used in cases of this kind, the main food must be carefully regulated or the birds will "go stale" as fanciers put it; however this would not prove advantageous from a practical standpoint. We have used oil meals each fall for our moulting hens, and have found it a great feather casting stimulant and have come to look on it as a necessity during the moulting period. It is fed in the proportion of one spoonful, to each fowl three times a week.

*Northville, Mich.* *J. B. Palmer.*

*Effect of Thunder on Hatching Eggs.*

With an experience extending over several years, we have yet to see a hatch or sitting of eggs that was in any way effected by a thunder storm. Of course there is a remote possibility that thunder may be injurious to hatching eggs, but on this point the writer is skeptical.

*Northville, Mich.* *J. B. Palmer.*

*Urging Hens to Greater Egg Production.*

Of course, such a thing is possible as urging hens to greater egg production than is natural, but whenever this is done, it is accomplished at a cost and loss of stamina and longevity of the fowl. The hen will only lay so many eggs in a year and if she is forced to produce the eggs in two years which she would ordinarily produce in three, it is done at an expense of life. There is no doubt but some tonics and powders (though not all) are good at some seasons of the year, but where birds are strong and healthy, we do not believe in forcing nature against its will. Properly cared for, hens will lay enough eggs to pay a handsome profit on the investment. *J. B. Palmer.*

*Northville, Mich.*

*Incubators or Hens.*

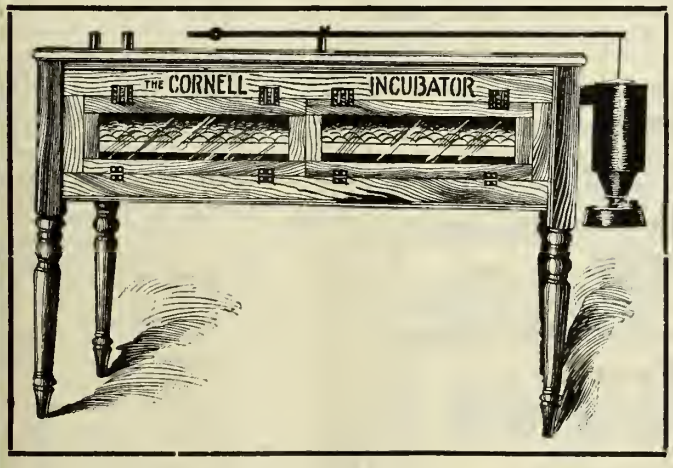
We raise each year hundreds of chicks by both artificial and natural means and can say with all truthfulness and candor there is positively no difference between chickens hatched in an incubator and those raised under the hens, at maturity. If properly cared for from the shell no expert can distinguish an incubator hatched chick from those hatched under the hens.

*Northville, Mich.* *J. B. Palmer.*

*Experience With Incubators.*

It is a very hard matter to place a conservative estimate on what can be expected as a satisfactory hatch from fertile eggs season in and season out, for the facts are, as we meet them in actual experience, that one season we find the eggs incubated in the natural way giving us all the way from ten to thirteen chicks from a sitting, while perhaps another season under conditions every bit as favorable and with just as good stock to breed from, we get only five to seven chicks from a sitting and sometimes not as many as that. But as we presume it is our experience and not heresay that is wanted, we think a fair average hatch made under favor-

# CORNELL INCUBATORS AND BROODERS



Are the latest and most modern inventions for artificially hatching and rearing chickens.

The great superiority of the Cornell Incubators and Brooders are due to the regulation of ventilation and heating.

No foul air or poisonous gases can accumulate in the egg chamber to poison or destroy the germ, as in the case of nearly all other makes.

Our new improved Brooders are also automatically heated and ventilated. You can keep the heat at a constant temperature, with no cold corners nor hot spots in which the chicks will crowd.

Send as soon as possible for our descriptive catalogue; you will get it free by return mail. Let your order follow quickly; it will be promptly filled. If the machines do not please you send them back. We will refund the money.

**H. A. GRIFFIN, Table Grove. Ill.**

## *Verhalen's Light Brahmas and Light Brahma Bantams.*

At Burlington, Wis., Poultry Show, Jan. 7-12, 1901, we took 1st and 2d on cock, 1st on hen (hy purchase). 2d on hen, 1st on L. Brahma Bantam pullet and 3d ou cockerel, and five specials. 20 good Light Brahma cockerels ready to ship. Eggs from our best pens $2 per 13,

***P. J. VERHALEN, Burlington, Wis.***

able conditions and one which any ordinary intelligent poultryman could reasonably expect, is forty to fifty per cent. Of course it sometimes runs a great deal higher than this, sometimes to almost a hundred per cent, but we make it a point to figure on this basis and turn over to extra profit what is realized over these figures.

*Northville, Mich.* *J. B. Palmer.*

### *Feeding for Eggs.*

I keep a small flock of Black Langshans and have found the following an excellent feed for winter egg production: Chopped corn and oats, equal parts, a few cooked potatoes massed, a small quantity of turnips cut fine in a vegetable cutter, and about one-half ounce of green cut bone per fowl. I feed this in a warm stiff mash every morning, with a little wheat in litter at noon and all the corn they will eat at night, warmed in cold weather, plenty of grit and oyster shell and clean water. This has produced more eggs this winter than my neighbors' flocks of three times the size of mine.

*Iowa City, Iowa.* *A. J. Boots.*

### *Shall We Mate by Score Card?*

We say no. Grade up your flock by score card, discarding everything below your standard. Pen a dozen females scoring the same. Do you find them identical in shape of any given point. Get thoroughly acquainted with your male bird first. Study him until you know all his strong points and his weak ones. Then choose females strong where he is weak. In White Wyandottes watch the combs and ear lobes and the neck color in females. Do not expect all the size from the male.

*John Coolidge.*

*Galesburg, Ill.*

### *Fertility.*

When the fancier has his birds in such condition that all or nearly all the eggs from his mating are fertile he has overcome one of the greatest difficulties. He does not have any orders to refill at half prices, as is often the case. Fertility does not lie altogether with the males, as some suppose. Usually, we believe, it lies with the female. We have noticed that nearly all of one hen's eggs will prove to be fertile, while another's, perhaps, will not be fertilized at all, or at least but a very small per cent will be fertile. Usually the cause is that the hen is not in a normal condition or does not get that which is necessary to make hatchable eggs.

Last season we had a few customers report poor hatches. As we were determined to please them, we refilled their orders free of charge. This season we have tried to give our birds every requisite necessary to produce fertility. Last fall the runs not in blue grass were sowed thickly with rye, thus providing green food in abundance, also having a nearby field of rye for the fall and winter range. The fowls appreciate this greatly. Plenty of green food of the right kind is one of the chief factors of egg production. In addition to this we give a liberal allowance of green cut bone throughout the season. The birds are always best pleased when this is given them, and we believe that they know best what is necessary for their well being. These, together with plenty of exercise, scratching the grain

of various kinds out of the litter, will make any hen glad and the breeder will be rewarded in full when hatching time comes around. *Duane Shaw.*
*Palestine, Ill.*

*Be Prompt.*

A friend of mine found herself needing a few Wyandotte pullets, and asked me to procure them for her at the earliest moment possible. I immediately wrote seven Wyandotte advertisers. Two answered promptly, and I gave one of them the order. Four days later one of the other advertisers wrote, describing his stock. He was eighty miles nearer to me than the one who got the order, and his stock was what I wanted. If he had been prompt in replying to my inquiry he would have received the order instead of the distant party. Procrastination is the thief of dollars. *Fred Grundy.*
*Morrisonville, Ill.*

*How to Make Advertising Pay.*

Be liberal with space, use cuts by all means if you have good ones, make your ad. different in some way from others. Be original, advertise your winnings if you have any, if not use more space, few words and large type, change you ad. often, but by all means see that the editor has it twelve times during the year. *J. L. Jefferson.*
*Des Plaines, Ill.*

*Free Range for Growing Chicks.*

Don't keep the old hen jailed up all the time with her little ones, but on nice clear days let her have what nature requires, free range, and she will scratch for the little ones food we cannot feed, nor feed it right if we had it. Watch her how she feeds her young and then take notice how we feed. No wonder we kill so many little ones.
*Dana, Ill.* *A. V. Dykes.*

*Fertile Eggs.*

This is the season of the year when the above subject is first in the breeder's mind. To get them, remember that three things are essential for the hens. Work, meat and green food and fresh water. Out of fourteen eggs set under a hen seven days, in January, 1901, thirteen of them showed good germs developed. Feed oats or small grain in the morning, give mash, if any, at noon, and sound, while corn in litter at night. Give water three times daily, green cut bone and cut steamed clover three or four times a week. *Elmer Brintnal.*
*Aurora, Iowa.*

*What I Feed Chicks.*

I have found millet the best chick food I ever tried. Give them some hard boiled eggs, plenty of fresh water and millet seed and you will have no trouble among the chicks. Keep the chicks on cut straw, or, better yet, hay chaff from the barn. If you rear White Plymouth Rocks and feed as above you will be happy. *U. R. Fishel.*
*Hope, Ind.*

*A Little Something.*

Your request was unexpected, but have always been a little cranky about chickens. First effort in thoroughbreds turned out poor by undertaking too

**Roger's Barred Ply. Rocks.**

Are line bred. Have bee n winners for six years. Won at South Bend, Ind., Nov. 26 to Dec. 1, 1900, 1st, 2d, 3d hens, 1st, 2d, 3d pullets, 2d cock, 2d pen. At Goshen, Ind., Dec. 4-7, 1901, 1st cock, 1st, 2d heu, 3d pullet, 2d pen. Four good trios at $5 each; 10 cockerels at $2 each. Eggs $2 for 15.

JOHN M. ROGERS, Box 365, South Bend, Ind.

**Chess has the Winners**

R. C. B. LEGHORNS

That won 23 premiums this season at the Indiana and Kentucky State Poultry Shows at New Albany and Louisville. In strong competition took the best at both places and captured first breeding pen. Eggs only $1.50 per 15 from these prize winners. Also breed the finest of Barred Plymouth Rocks. Good stock for sale at all times. Satisfaction or money back.

H. H. CHESS,
Box A, - - - Leesville, Ind.

**Rose Comb Buff Orpingtons.**

Eggs from two pens, imported direct, at $5.00 per 15.

**Barred Plymouth Rocks.**

Eggs from four pens, scored by Bridge, at $1.50 per 13. High scoring and all above Staudard weight. Mention A. P. J.

JACOB HANDTE, Calla, Ohio.

**Black Minorcas**

That Have Never Been Beaten in a Show Room.

Chicago, 1901—1st cock, 2d hen, 4th cockerel, 3d pullet and one special. Five premiums, 4 birds entered. Eggs from No. 1 pen, $1.50 per 13: No. 2 pen $2 and No. 3 pen $3. B. P. Rocks that are barred to the skin. Eggs $1.50 and $2 per 13. All stock line bre d and mated for best results.

C. N. BLISS, 1613 Queen Ave., N. Minneapolis, Minn.
(Member of Black Minorca Club.)

**Allee's Black Langshans.**

EGGS! EGGS!

Why not obtain winners from mine and have winners of your own? Three grand breeding pens mated with high scoring birds. Place your order at once. Satisfaction guaranteed,

THADDEUS E. ALLEE, Greencastle, Ind.

MRS. E. I. REYNOLDS, Haskells, Ind., Breeder High Class, Pure Nugget Strain

**Buff Plymouth Rocks.**

They win at great Chicago Show, Jan. 1901, 3d cock, 4th pen, 5th hen—one pen entered. Won at La Porte, Ind., Nov. 26 to Dec. 1st, 1900, 1st cock, cut 2¾ on color; 2d cock, cut 1½ on color; 3d cock, cut 1 on color. These birds were in bad feather, wings but half out at time of showing. 1st, 3d and 4th hens; 1st, 3d and 4th pens; special for highest-scoring cock; special for best colored hen; special for highest-scoring hen; special for best colored pullet. Many females were cut but 2 and 2½ on color, in class of 61 birds. Theo. Hewes, judge. Birds are all line bred and farm raised. My pens contain all these prize winners. Eggs $3 per 15.
Write me. State Vice President American Buff P. Rock Club.

**Buff Wyandottes,**

**ROYAL STRAIN.**

Winners this season at Chicago, Detroit, Battle Creek and Rochester, N. Y. I am now furnishing eggs from this grand flock of winning specimens. Send for catalogue giving full description of the best flock of Buff Wyandottes in the world.

W. R. WOODEN,
Battle Creek, Mich.

# Johnson's Light Brahmas

Won every prize at the St. Louis Fair, 1899, a record no other Light Brahma breeder has ever made. Winners for sale. 5 elegant yards mated for the egg trade.

**FRANK P. JOHNSON, Box A, Howlands, Ind.**

# JORGENSON'S BARRED PLY. ROCKS.

My birds are winners in strongest competion. They are large size, elegantly marked and the kind you will be proud to own. In addition to other regular prizes won at Racine Show, I had 1st cockerel and 1st pen. First prize cockerel was pronounced by experts to be a duplicate of the first prize bird at Chicago. I have some **FIRST CLASS BREEDING BIRDS** for sale, and am accepting orders for eggs from my choicest birds at $2.50 per sitting.

**CHAS. P. JORGENSON, 922 Forrest st, Racine, Wis.**

Secy Racine Poultry, Pigeon and Pet Stock Assn.

# RHODE ISLAND REDS. - HOUDANS.

**DANIEL P. SHOVE, Fall River, Mass.**

Record on Rhode Island Reds at Boston, Jan. 1901, 1st cockerel, 1st pen; one 3d and 5 specials in the Single-comb class. In the Rose-comb class 3 thirds. We also own the R-c. cockerel that won 1st and special. At Poughkeepsie, N. Y., we won six firsts and five seconds. Send for circular giving other records. Can sell you winners and eggs which will produce winners. Eggs, $2 per 13; $5 per 40.

**BELGIAN HARES**—I won at Boston the N. E. Club Silver Cup for best 8 months old buck.

**DANIEL P. SHOVE,**

**Box 666. Fall River, Mass.**

# We Have Them!

Pure bred Light Brahmas and White Wyandottes, Duston and Ella Thomas strains. Wyandotte pens headed by cockerels scoring 93 and 94½, mated to hens and pullets scoring 91 to 94 by Pierce. Brahmas—cock scoring 93½ to pullets scoring 92 to 95 by Pierce. Eggs $2 per 15. Some choice cockerels of both varieties for sale at $2 and $3 each. Write for prices. Strictly honest dealing.

**THOS. H. BUTLER & SONS, 218 N. Taylor Ave., Oak Park, Ill.**

# OAKLAWN POULTRY FARM.

If you want eggs that will raise birds good enough for any show room, place your order with me at the very low price of $2 per 13 or $7 per 100. 19 varieties. All birds used in our 1901 pens score from 90 to 95 points. Send 2 cents for catalogue in colors.

**W. A. McKEE, Box 100, Knoxville, Iowa.**

# FENN'S BANTAMS

Winners again in hot competition at the S. E. Wis. Show, 1901—24 firsts, 14 seconds, 8 thirds, 3 fourths and 3 specials on 55 entries.

**EGG ORDERS BOOKED NOW.**

Golden, Silver and Frizzled Sebrights, B. T. Japanese, Buff, White and Black Cochins, Frizzles, B. B. Reds, Red Malays, Red Pyles, Silver Duckwing and Black African Game Bantams. Marie, score 93, first pullet at Logansport, Ind., Dec. 5-12, 1900.

# March's Barred Rocks are Winners.

At Logansport, Ind., Dec. 5 to 12, 1900, 1st, 2d and 3d cockerel; 1st, 2d, 3d and 4th pullet; 1st and 2d breeding pen; 4th hen, and three specials for best cockerel, pullet and pen; scoring 91 to 93. Chas. McClave, judge, offered me long price for first cockerel but I refused it. Breeding yards mated Jan. 20. Am booking egg orders for future delivery at $2.50 per 15; $4.50 per 30 from special and standard matings. Send for circular, as I am now ready for the egg trade. Mention American Poultry Journal.

**W. P. MARCH,**

**Winamac, Ind.**

many breeds, always had good respect for the business hen; she is active, up and out at first peep of day and never gets too fat, but the hen that stays on roost until 6 or 7 o'clock gets too fat; send her to market, it will save feed and not decrease egg supply.

*Lewis J. Baynes.*

*Salem, Ind.*

---

*How I Care for My Fowls.*

Every morning I give them a light feed of corn and oats; at noon bran and shorts, with some of Darling's Concentrated Meal, about five quarts to 100 fowls; evening feed some corn and oats. All the grain is thrown into straw for them to scratch for. I give fresh water every day. Once a week I give them grit, oyster shells and ground meat scraps; clean their rooms every Saturday and give them fresh wheat straw to scratch in for the week. Would like some one to tell me how to improve the above. *James Hankinson.*

*Maroa, Ill.*

---

*Mentioning Where We Saw Your Ad.*

If everyone "who answers advertisements" knew how anxious the advertiser is to know what paper brought the inquiry and how pleased the publisher is to have his paper get the deserved credit, they "all of them" would certainly mention the paper they saw their ad. in. I saw your ad. in the AMERICAN POULTRY JOURNAL does not require much space nor much time to write it. Why not mention the paper when you write an advertiser; it's an accommodation all around. *Sure Hatch Incubator Co.*

*Clay Center, Neb.*

---

*About Our Express Rates.*

We don't see why so many of our older breeders of fancy poultry make such mistakes about shipping poultry. We have shipped hundreds of birds this season and not once did our customers pay double rates. We ship by the U. S. Express. But we make a well-slatted coop, while most—in fact, all of the breeders whom we have patronized this winter for new blood have poorly slatted coops, of which the canvas forms a necessary part. We have paid double rates on quite a few birds on this acount. We would advise all breeders to let their express agent inform them a bit on this matter. *Geo. Kreuscher & Co.*

*Somers, Wis.*

---

*Be Watchful.*

This is the season when the grit boxes must be refilled often. Nests kept clean and free from vermin. Plenty of fresh water kept before the chicks at all times. Dust boxes refilled and all the little details daily attended to. Then with whitewash, lice paint and all the implements of war, watch out for the army of lice and mites that are ready to seek and devour. They always have their armor on and are ready for business. Do not let them get the first inning. *Mrs. J. M. Denison.*

*Elgin, Ill.*

---

*Brooder Chicks.*

In my opinion more brooder chicks are killed by kindness than die of any other complaint. A chick that is a little hungry will take exercise sufficient

to keep in good health. Make your ration for chicks about one-third cracked cane seed, and you will not have much bowel trouble, and sprinkle the floor of brooder with good clean sand every day or two. *D. W. Grant.*

*Almena, Kan.*

*Caring for Young Turkeys.*

Early hatched turks should not be allowed on the ground. Keep their pens bedded with dry straw. Don't allow turkey hens that have no young to run with hens that have very young poults as they ofttimes travel too fast for them. Don't dust the turkey hen and let the young ones go, as it will run the lice off on the young turks.

*Siblcy, Ill.* *S. H. Taylor.*

*Coops for Young Chicks.*

A good warm coop for the little broods at this time of the year is an absolute necessity, and there is no time in the year when it is so important as now. Each spring I try to keep my chicks in such out-door coops that will furnish the most comfort. I see that the coop is in proper condition in regard to cleanliness, warmth and ventilation, especially during these cold stormy days and nights while the spring weather is so changeable. Right here let me say: Any old box or barrel won't do. While I write this morning, March 23, we are having one of the coldest, most severe rainy days we have had for months. The rain is coming in torrents, wind blowing from southeast, beating hard in at every crack and crevice. But I know everything is all O. K. in my coops, houses and yards, and all is safe. Thusly, my brood coops are from two to three feet wide by three to four feet long. A little large at first, but as the brood grows, with 16 to 24 in a brood, will soon be small enough. I always have a floor in each coop, with dry sawdust about one inch deep on it, the coop is up at least two to four inches from the ground, so it will keep perfectly dry and so arranged as to allow no draft to pass through. Having them in this shape, I know they are safe and satisfied by day and night, and my own satisfaction more than pays for what trouble it has cost me. With me it is a matter of business the same as providing the best of remedies for my patients in my medical practice. I can't see how a breeder can be successful without providing the best of quarters for at least the young broods, for they cannot properly grow, and will not, unless properly housed as well in bad weather as at night, and it is the early hatched, well cared for chicks that make our best show specimens. I wish all my fellow breeders the best of success the coming season both in raising and at shows.

*Dr. McCoy,*
*Proprietor Oso Fancy Poultry Yards,*
*Oso, Mo.*

*Our New Bill of Fare.*

The past few months we have been using a somewhat different bill of fare for our birds than we have used previously, although it comprises the same foods, and the result in the egg yield has been very satisfactory. Tuesday and Friday mornings we feed mash of bran and shipstuff and feed it hot when the weather is very cold. In the evening we feed oats and shelled corn. On Monday, Wednesday, Thursday, Saturday and

**E. H. EPPERSON, Box 226, Champaign, Champaign Co., Ill.**

# ONE THOUSAND LICE

There are often a thousand lice on one fowl or hog, where careful inspection would not reveal a dozen. When Lee's Lice Killer is used, it kills, not only the mites on the roosts and about the poultry house, but also all the body lice on the fowls. That's just the difference between Lee's Lice Killer and cheap imitations. They all kill some lice, but Lee's Lice Killer gets them all. You can take a lousy chicken or hog that has been treated with other lice killers and insect powders and by the use of Lee's Lice Killer bring to light more lice than you ever dreamed existed on a chicken or hog.

# LEE'S LICE KILLER

is applied to the roosts for poultry; on bedding or rubbing-posts for hogs. It kills all mites and lice on the roosts or wherever applied and it then evaporates, forming a gas of the same weight as air. This gas or vapor penetrates the feathers of the chickens or the bristles of a hog, killing all insects on their bodies. A portion of the fluid evaporates more slowly, remaining about the place for a long time, disinfecting the premises and excluding all insect life. Lee's Lice Killer is never sold in bulk. When you buy it in our original air-tight packages, you get it full strength, undiluted. For sale in every state in the Union. Endorsed by poultry, farm and stock journals everywhere. Send for handsomely illustrated booklet with testimonials and valuable information to the raiser of poultry and stock. **Special introductory offer to points where we have no agent.**

## 1,500 Birds to Select From.

The finest lot ever bred at Linwood Farm. Now is the time to place your order for show birds and breeding stock. Don't waste time and money buying cheap or inferior birds, but write at once to McClave, the largest breeder in OHIO. Over 2,000 prizes won by my birds at the leading shows.

**Valuable Catalogue Free.**

Write for prices and description of birds.

**CHAS. McCLAVE,**

**Box 746, New London, Ohio.**

Sunday evenings we feed shelled corn and in the mornings of these days we feed milk and a few raw potatoes chopped up and oats. When the weather is cold or disagreeable the oats are scattered in litter in scratching room and at other times in the grass in the yards. Each pen has a large yard with heavy blue grass sod. The birds have access to gravel and lime with an occasional feed of charcoal. This bill of fare is simple and inexpensive and can he obtained by any farmer or poultryman.

*C. H. C. Anderson & Co.*
*Fairview Farm, Carlinville, Ill.*

### *Healthy Young Chicks.*

We find in raising chicks that the most important rules are as follows: 1. Do not feed too soon; wait at least 24 hours. 2. Feed regularly; do not feed one morning at 5 o'clock and the next at 8; irregular meals help to make irregular bowels. 3. Do not feed sloppy food, especially raw cornmeal moistened with cold water; have it haked into cornhread. 4. Keep plenty of good sharp grit hefore them constantly. 5. Have them in dry, clean quarters. Last, but not least, be on a constant lookout for lice. One of those large head lice can sap more life and vitality from a chick in one day than he can gain in four or five.

*Georgetown, O.* *W. C. Allison.*

### *Remarks on Overweight.*

There are only exceptional birds that possess a frame large enough to he overweight without too much fat to he properly proportioned for exhibition specimens. It is a well known fact that in making the Standard the full weight limit was given all breeds, a weight that would correspond with a well proportioned hody. That heing the case, overweight hrings its proportion of cuts, or should, just as underweight does. If we have a Standard, why not comply with it, recognizing overweight in the same way as underweight? Is not one just as near right as the other? *F. A. Waddell.*
*Wauseon, O.*

### *Operating Your Incubator.*

In making your first hatch with your new incuhator, he sure you follow your directions. Use good judgment. Never do any one thing without having a reason for it. Watch the temperature closely. You must not expect to run your incubator in a damp, cold or musty cellar. No matter what has heen told you ahout the ease of running your machine you will find it necessary to understand the machine before you expect results. Do not condemn your incubator after the first hatch. Wait until you try it a few times, and then make your decision. *N. C. Sprague,*
*Manager Iowa Incubator Co.*
*Des Moines, Iowa.*

### *Don't Do It.*

Two of your correspondents in April number recommend resetting a hen. Don't do it. Three weeks is long enough for any hen to set. She may live; but she is injured beyond doubt, and it is too risky. On the other hand, it does not pay to try to hreak up a hen as soon as she wants to set. If you manage your business right you will have plenty of eggs to set her on, and she will be broken up in half the time after she sets three weeks, and lay twice as many

eggs when she does begin. Do not try to interfere too much with nature. I find eggs twice as fertile this season as last. *Dr. H. F. Ballard.*

*Chenoa, Ill.*

### *My Care of Setting Hens.*

Take a separate pen away from other fowls if possible. Make a sliding front to the nest box, so as to keep the hen where wanted. Paint the next box with some lice killer. Place coarse horse manure in bottom of the nest and cover with cut straw. Place hen on nest after dark and close the front. Place corn and fresh water in the pen and let her off every day for food and exercise. A day or two before hatching sprinkle the eggs with tepid water. *S. H. Bird.*

*Oak Center, Wis.*

### *Two Hens with One Brood.*

When a number of hens bring off their hatches at the same time it is often an advantage to give thirty or forty chicks to two hens in one brood coop and run. Care must be taken to select two birds that will not quarrel. I have tried this plan for several seasons and find it a decided saving in coops and time.

*Yarmouth, Me.* *F. O. Wellcome.*

### *A Few Don'ts.*

Don't feed mash in the morning if you expect your eggs to be very fertile. Don't feed mash very extensively to your breeders either morning or evening. Don't let your hens get fat and lazy if you want their eggs to hatch well. Don't feed animals meal too often. Don't monkey with red pepper or other hot nostrums except in special cases, and then rarely. Don't go in very strongly for rich, spicy poultry foods, that you pay two or three prices for. Don't feed anything but fresh, wholesome grains and vegetables, with occasional entrees of green bone or animal meal.

*F. W. Leach,*
*Prop. Egg Harbor Farm.*

*Tuckerton, N. J.*

### *Care of Chicks.*

Some of the articles written by "experts" and published in poultry journals are misleading and intended more for jokes than information. Some of the writers try to make us believe it takes two men and a boy to take care of an old hen and five chicks. I have raised chicks many years and my experience plainly demonstrates, in my mind, that a two-dollar bill of fare for chicks five times a day is more than the chick's constitution is able to stand. My advice is: Hatch chicks early, feed less, feed moderately, feed plain food, keep clean and dry, use judgment, use good common sense and success is assured.

*Van Wert, Ohio.* *C. E. Detter.*

### *Selecting Eggs for Hatching.*

Selecting eggs for hatching is somewhat of a study. Don't select eggs that have any odd shapes, such as long points on small end of the shell or particles of lime adhered to the shell, or flat-shaped circles, or coarse rough surface. Use smooth even shape, uniform sized, not too thick shell nor too thin. With good sized circles and large, round eggs are the most desirable; have them fresh as possible. Don't keep them too warm before you set them; keep them in a med-

**Ft. Atkinson, Wis.**

ium dark place and turn them frequently before setting. *J. H. Geidner.*

*Rock Falls, Ill.*

---

*Stock or Eggs.*

After seven years' experience buying both stock and eggs of the prominent breeders of B. P. Rocks and W. Wyandottes both east and west, my advice to the beginner would be to buy stock every time and that the best, if you can't afford more than a pair or trio, of some breeder who has been in the business long enough to establish a reputation. Nine chances to one you will raise more birds the first year than you would from what eggs you would buy for the same money. *J. N. Young.*

*Whitefield, Ill.*

---

*Don't Overfeed.*

Don't feed the little chicks more than they will eat up clean in five minutes. Feeding three times a day with plenty of exercise, having in mind that a hen with 10 to 15 chicks, has the whole back yard for the chicks while too many times 75 in a brooder have about 20 square feet in which to run, dig worms look at growing grass one inch away, drink dirty water, stand the hot sun's rays, lose their appetites; and the keeper wonders why they die off so. Just remember how others raised chicks when they have free range and do likewise.

*Elm Poultry Yards.*

*Hartford, Conn.*

THE APRIL "AMERICAN BOY."

The April *American Boy* (Sprague Publishing Co., Detroit, Mich.) is brimful of good things for boys, as usual. It contains 112 pictures. Its leading article treats of "gentlemanliness." The stories are: "The Boy Who Rode a Moose," "Go It, Tom," "The Men of Might; or, the Lusty Nine," "The Great Bicycle Race at Pultney," "Splitting the Herd," "Three Boys in the Mountains," "Lazy Jack," "A Vegetable Discussion," and "The Cruise of the Yacht Gazelle." Other items of interest are: Talks with Boys and Their Friends; The Charleston Navy Yard and a Visit to an Ocean Liner; Turning Points in a Boy's Life, The Boys' Picture Gallery, The Boys' Library, What Boys are Doing, Boys as Money Makers and Money Savers, April in American History, How to Make Your Own Tackle and Something About Fishing, The Agassiz Association, Boys in the Home, Church, School, Office, Store, Factory and on the Farm; The Order of the American Boy, Boys in the Animal Kingdom, The Poultry Yard, Boys in Games and Sport, The Boy Stamp and Coin Collector and The Boy Photographer.

This is one of the handsomest numbers yet issued by this company. $1.00 a year.

---

The position which the Pierpont Morgan organization holds with reference to the business and political world is discussed by Mr. John Brisben Walker in the April *Cosmopolitan* under the title, "The World's Greatest Revolution." Familiar with the business world and a student of affairs, Mr. Walker has, while approving of the general idea of concentration which makes for good organization and public economy, drawn a picture of the power now exercised which will be a surprise to the great majority who have not given this subject thoughtful attention.

# Questions and Answers.

Our Subscribers are invited to make use of this department whenever we can be of service to them. All questions are answered in the order in which they are received. If your question is not answered in this number, look for it next month.

*Editor American Poultry Journal.*

DEAR SIR: When my chicks get to be two or three weeks old they die with diorrhea. I feed bran and corn meal dampened with water three times a day. Have millet seed and fresh water before them at all times. Please advise ue if my feed is all right. The bedding is clover chaff. Do you think it is too dusty? *G. E. T.*

*New Lancaster, Ind.*

Raw corn meal dampened with water is a very undesirable food for chicks and will couse bowel trouble if fed too often. Millet seed is good for them, but no kind of food should be kept before them all the time. The clover chaff is not too dusty unless chicks are in small tightly closed brooder. See some of recipes for feeding chicks in the "Little of Everything" department in the JOURNAL this month and last. You will find a remedy for bowel trouble elsewhere in this number. It is recommended by W. F. Coats, Columbus, Ind.

---

*Editor American Poultry Journal.*

DEAR SIR: Please answer through your Question and Answer column the following question: Please state the weight of cock and hen, cockerel and pullet of Red Pile Game Bantams and the color of the same, including color of beak and legs. *J. R. G.*

*Roseboom, N. Y.*

Cock should weigh 22 ounces, cockerel 20 ounces, hen 20 ounces and pullet 18 ounces. Color of beak should be yellow or willow. Legs and feet yellow or willow, yellow preferred. We could not give you a satisfactory description of the color of plumage without quoting the Standard.

---

*Editor American Poultry Journal.*

DEAR SIR: I have three Plymouth Rock hens which are developing enormous crops what is wrong with them. They are not apparently sick and eat moderately well, but continually twist their necks but do not lay. I feed bran and chop mash, corn and table scraps. I fed whole oats freely last summer and early fall while the flock was out on farm range, but none since Oct. 1. Could that have caused the trouble?

I have a cockerel mated with a pen of two-year-old hens, and he has the meanest disposition I ever saw. While seemingly on good terms with most of his harem there are three hens he imposes upon. He will pick back of their heads until blood runs and won't allow them near the food while he and the balance of hens are eating. How shall I proceed in that case? An answer will be greatly appreciated. *C. G. M.*

*Lisbon, Ohio.*

Your hens are probably becoming crop bound. Examine the crop and if the contents seems hard or lumpy you had better pour a liberal quantity of warm water into the crop and endeavor to separate and work down the mass by gentle and constant pressure outside. If this does not afford relief it will be necessary to open the crop and remove the contents. Use a very sharp knife and after plucking a sufficient number of feathers from the crop, make a cut in the outer skin about two inches in length. Pull the crop to one side and make a similar incision in it and then remove the obstruction. You will perhaps find it to consist of straw or dead grass. Be careful to move the crop before cutting it in order that when it assumes its natural position the cut will be entirely covered by the outer skin. Sew both cuts with a silk thread and feed sparingly of soft food only with very little water for two or three days.

The vicious male bird should be removed from the pen or the objectionable hens taken out. Temporary separation will sometimes remedy the trouble.

*Editor American Poultry Journal.*

DEAR SIR: Will clipping the wings of little chicks when they seem to grow too fast have any effect on plumage of bird when it is grown?

Is the last egg which a hen lays before setting as liable to be fertile as any of her other eggs? H. E. B.

Galesburg, Ill.

Clipping the wings of very small chicks will not affect the plumage of the adult bird.

The last egg which a hen lays before setting is as apt to be fertile as any of the other if she has been in the breeding pen constantly. Sometimes a bird lays after she has been setting a couple of days and in this event it is possible that the egg would not be fertile. The mere fact of the egg being the last one has no bearing upon the matter.

---

*Editor American Poultry Journal.*

DEAR SIR: Will you kindly inform me what causes scaly leg and how to cure it? *E. M. L.*

*Armour, Ind.*

Scaly leg is caused by a parasite which bores under the scales. Anoint the legs daily with a preparation of lard and sulphur equal parts mixed with sufficient coal oil or kerosene to make it of the consistency of molasses.

---

*Editor American Poultry Journal.*

DEAR SIR: I would like to procure some White Faced White Spanish fowls. Can you give me the name and address of some breeder of them? E. E. P.

*East Cleveland, Ohio.*

We know of no one breeding White Faced White Spanish. If any of our readers have them they will no doubt do well to advertise the fact.

---

*Editor American Poultry Journal.*

DEAR SIR: Will you kindly tell me in the columns of your Question and Answer Department which is the heavier bird at the age of three months—a White Wyandotte or a White P. Rock.

*Kenosha, Wis.* *D. O. H.*

All things being equal, the White Plymouth Rock will weight more than the White Wyandotte at any period of their existence. The White Rock is naturally the larger and heavier bird.

---

*Editor American Poultry Journal.*

DEAR SIR: We have some pullets that have been running at large with common stock, among which was a number of

**White Wyandotte Eggs**

From some of the best shaped birds on earth. They are all pure white and are bred from winners. Eggs from our yards at $3 per 13, or $5 per 26; incubator eggs at $8 per 100. A few good females yet for sale.

cockerels. We have now confined the pullets with a cock of the same breed. How long will we have to wait before we can be sure that the eggs laid will be fertilized as a result of the last mating?
*Chariton, Ia.* *Subscriber.*

The time required depends upon the laying condition of the pullets. The only safe way to figure the matter is to count upon the number of eggs laid after they were changed. The third or fourth egg will almost invariably be fertilized by the last mating.

---

*Editor American Poultry Journal.*

DEAR SIR: Please tell us through the journal what causes chickens to eat their feathers, also a cure for same, if it can be cured. *Mrs. A. M.*
*Lanark, Ill.*

Oftentimes feather eating is a bad habit, resulting from idleness. In some cases it is caused by a species of lice, which irritate the skin around the root of the quill. It will also be noted that the young or growing feathers are generally the ones eaten and the blood found in the quills is agreeable to the taste and encourages the practice. If your fowls are confirmed feather-eaters, you will do well to dispose of them. Feed them a variety of food and particularly animal food, such as meat and green bone. Give them plenty of exercise.

---

*Editor American Poultry Journal.*

DEAR SIR: I have a hen which has some difficulty in breathing, and she has been so for a month. There is no discharge from the nostrils or mouth. Eyes are not swollen, but in looking down the throat I find the "mouth of the windpipe" is somewhat enlarged and looks rather white. She makes quite a noise when breatbing and at times gives the head a shake, as if trying to throw something out of the throat. What can I do to cure her? *D. E. J.*
*Jonesville, Mch.*

From your description of the disease we would conclude that the bird had diphtheria, but this could hardly be possible, if she has been affected for a month, as it would have killed her in a much shorter time. It is perhaps a case of canker. Scrape the surface of the throat clean. No harm will be done if it bleeds a little. When this is done, wash it with a piece of cotton saturated with peroxide of hydrogen. Then drop a little aristol on each sore place and repeat this operation morning and evening for three days.

---

*Editor American Poultry Journal.*

DEAR SIR: What is the standard weights for Barred Rock hens and cockerels? *O. B. S.*
*Ottawa, Ill.*

Cockerels should weigh eight pounds and hens seven and one-half pounds.

---

*Editor American Poultry Journal.*

DEAR SIR: Can you tell me what is the trouble with my three-weeks'-old chicks? They were growing finely until four days ago. I had 47 in a Cyphers Style A Outdoor brooder in a room 8x10 with a dry gravel floor. Four days ago one of them began to at times throw its head back, yell at top of its voice and run backward until stopped against something, would tremble as though very cold; this would last but a moment, when it seemed all right again, but in a few moments would have another attack; in two days was dead; also three others since and many are affected; they have

a good appetite to the last. I have fed them five times a day, principally on a mash of one-third cornmeal and two-thirds wheat middlings; have fed them one meal a day on bread moistened with milk; the mash was never sloppy; they have access to grit at all times; their quarters are warm and dry, with plenty of sunlight. Have occasionally fed them chopped cabbage and onion tops in place of the mash; use Cyphers drinking fountain and change water three times per day.

Being a reader of AMERICAN POULTRY JOURNAL I take the liberty of asking you this question. This is my first attempt at artificial brooding and know nothing of the diseases of brooder chicks.

*Lexington, N. Y.* *F. H. P.*

You seem to be doing all that can be done for the chicks and we are at a loss to understand why they should be affected as you say. The difficulty is bowel trouble and is no doubt constipation. They may have become overheated for too long a time or it is possible that they were chilled. We would not feed them too heavy and would add boiled milk to the bill of fare. Do not overcrowd the brooder and see that they are absolutely free from lice. It is impossible to prevent having more or less trouble of this kind, but there is no reason why it should be epidemic under your method of feeding if the chicks are from healthy, hardy parents.

---

*Editor American Poultry Journal.*

DEAR SIR: I would be very glad for your opinion on this subject: We had one turkey tom left for sale when the breeding season began and had to yard him to keep him from mating with our hens. To keep him separate we had to clip one wing. A little later we had a chance to dispose of him. The man kept him about three weeks and then returned him, saying he was incapacitated for service. He did not give it as his opinion that the clipped wing caused it, but had heard that it would. Please let me know what you think about it. *C. D.*

*Rockville, Ind.*

The clipped wing could not in the slightest degree have affected the reproductive powers of the bird. This is one of the silly statements often made by people whom common sense should teach better.

---

*Editor American Poultry Journal.*

DEAR SIR: I am a reader of AMERICAN POULTRY JOURNAL, and as such I ask you to favor me with a little information. I have two pullets, both laying, but they have never been mated. How long would it be after mating before the eggs would be fertile? *A. E. C.*

*Chicago, Ill.*

If the pullets have been mated a week before laying you can rely upon the first egg being fertile, but it is generally small and will not produce satisfactory results if incubated. Only eggs of normal size and appearance should be placed under hens or in a machine. If the birds have been laying and not previously mated you can depend upon the eggs being fertile after three or four have been laid.

---

*Editor American Poultry Journal.*

DEAR SIR: I would be glad to have you tell me what is the matter with my pullet. She will walk round and round and throw her head in all directions. At times she appears to be blind, as she will walk right up against some object. She seems to be in good condition otherwise. She eats alright and is not too fat. *W. S.*

*Arcadia, Neb.*

Your pullet is suffering from congestion of the brain, which may result from several causes, among which are a blow upon the head, exposure to hot rays of the sun, a complication with infectious diseases or accompanying irritation of the intestines by worms. Apply cold water or ice to the head and hold it in position till the head has become cooled. Give 30 grains of Epsom salts or one and one-half grains of calomel or a tablespoonful of castor oil. Keep the bird in a cool quiet place. If the bird is troubled with worms, administer suitable remedies.

---

*Editor American Poultry Journal.*

DEAR SIR: Being a subscriber to A. P. J., I take the liberty of asking your advice in regard to some of my chicks, which seem to be troubled with leg weakness. They are six weks old, and seemed to be doing well until the past two weeks. They have been fed according to the most approved methods, both as to the character of the food and the quantity given. Can you tell me what to do for them? *J. K.*

*Spring Lake, Wis.*

The trouble is probably caused by the heat in your brooder not being properly distributed. Perhaps you give them too much heat, and especially bottom heat. It may also be the result of keeping them constantly on a wooden floor. If you are not at fault in any of these points we would suggest that you feed them less and make them scratch and take more exercise.

AMERICAN WHITE PLYMOUTH ROCK CLUB MEMBER

**32 Premiums at Two Shows, 1900.**

We breed Barred and White Rocks, S. C. White and Brown Leghorns, White and Silver Laced Wyandottes, Light Brahmas, Black Langshans, Pit Games, Pekin Ducks, M. B. Turkeys, Homing Pigeons, heavy weight Flemish Giant and Belgian Hares. Catalogue free.

# There Can be No Question

***But that PORTER'S BARRED ROCKS are***

Equal to any in America, There prize winning record in competition with the best this country has ever produced, establishes the fact that

## There Can be No Better.

**MONEY WAS LIBERALLY SPENT** in laying the foundation for this superb flock, and every scientific principal has been applied in mating year after year to produce a strain, the superior of which does not exist.

**NOT ONLY HAVE THEY WON** against the keenest competition in the world, but eminent judges and critics visiting my yards pronounce them "as good as the rest" if not "better than the best."

**THERE COMMENDABLE FEATURES ARE** large size, elegant shapes, deep bodies, full, round, broad breasts, and wide backs, proper carriage of tail, good combs, handsomely barred and correct in color. They are as near to standard requirements as have ever been reached.

## SEVEN GRAND YARDS.

**MATED TO PRODUCE BEST RESULTS,** from which eggs will be sold for hatching. **Now is the Opportune time** to start the chicks on the road to fame in ribbon getting in our next winters shows. **WHY LOSE TIME** and try your patience with eggs from inferior stock when the best can be had at no greater expense?

## EGGS FROM THE CHOICEST MATINGS

(Prize Winners) **ARE ONLY $3.00 PER SITTING** Incubator eggs from the "Flock" $6 per 100. Carefully selected and packed with great care. Safe arrival and absolute satisfaction guaranteed.

**HANDSOME YOUNGSTERS** and choice breeders for sale at quick selling prices. Every bird guaranteed to be exactly as represented or money cheerfully refunded. A few fine cockerels scoring 93, 93½, 94 and 94½ points by competent judges, yet for sale.

**PARTICULARS AND FULL INFORMATION** promptly and cheerfully given. Address

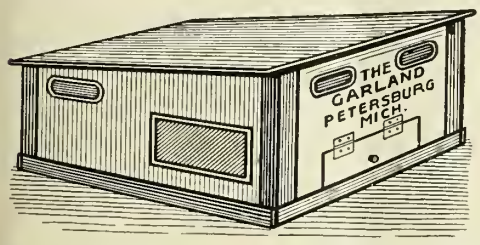
Rocks (Hawkins, Bradley), White Rocks (Empire), White Wyandottes (Duston), eggs, 20 for $1. Mention paper. Reference given. Don't send personal check.
Agent for Cyphers Incubator.

## NORTHUP'S MINORCA SINGLE AND ROSE COMB.

**EGGS GUARANTEED TO HATCH**, regardless of distance. Fowls successfully exported to all parts of the world. **LARGE CATALOGUE FREE.** 68 page book, "Minorcas All Varieties," history, mating, fitting for show, etc., fully illustrated, 25c. My Minorcas have never lost a special for large size, and have won more prizes for my customers in strong competition, New York, Boston, Washington and other leading shows, than any other four strains combined, which proves the quality of stock I sell.

**GEO. H. NORTHUP, Box 231, Raceville, Wash. Co., N. Y.**



### It Stands to Reason

that there is money saved in buying direct from the manufacturer. The profits between the manufacturer and consumer are large. **We Save You These Profits.** We are the largest manufacturers of insecticides in the world selling to the consumers exclusively. We guarantee to give you much better quality for less money than the jobber or dealer.

During the next 90 days we will offer Naylice Insecticides at prices that will move tons of it to all parts of the world. Naylice and Liquid Naylice is the standard of excellence and is used and endorsed by thousands of poultry and stock keepers throughout the United States and foreign countries. Naylice Insect Powder will rid your poultry of vermin as rapidly as you can apply it—kills lice instantly. Special price, $1 per doz. for 12 oz. cans. Liquid Naylice, the best liquid vermin destroyer in existence. Special price, 50c per gallon can, crated for shipment. For $1 we will ship one 1-gal. can of L. N. and ½ doz. cans of Naylice. Why let vermin eat up your poultry and profits when you can so quickly and so cheaply put a stop to it. We manufacture the "Garland," the brooder that is different from all others. Our catalogue is free.

**THE RAISIN RIVER BROILER PLANT, Petersburg, Mich.**

## Leffel's Unconquerable Barred Rocks

### Always Win Lions Share of Prizes.

First Prize Pullet, Cleveland, O., Show, December, scored 94½ by L. G. Jarvis, Guelph, Canada.

If you do not believe it **SEND AND GET HIS CATALOGUE** and it will tell you who scored his birds. He stands in front, with highest scores by leading judges. I. K. Felch gave one of his cockerels score of 95 points, and wrote across score card, every doubt given against this noble big fellow; weight, 11 lbs. H. A. Bridge gave one of his birds score 95 points. B. N. Pierce cut one of his cockerels one-half in color. L. G. Jarvis, Guelph, Canada, scored 4 birds 94½. J. Y. Bicknell scored cockerel 94½. Charles McClave, 93½ scores of birds. I have exhibited 30 times in past 8 years and won 29 times on cockerel, and tie the other one score. Sharp Butterfield scored 3 cockerels in one show 93½. Send for my catalogue and see my winnings and scores, and who scored them, and you will say he leads the procession in winnings.

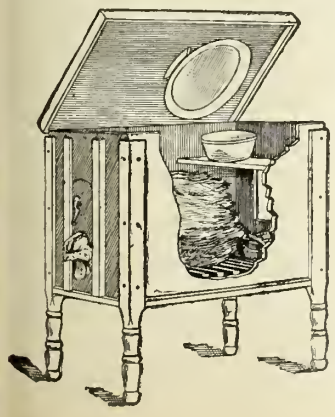
### Never Lost on Breeding Pen

in any score-card show, nor any pullet where they were weighed and weighed correctly. Eggs $3 per sitting. Only lost once on first cock. I won all prizes at Springfield, O., Aug. 21-24, 1900, all prizes offered. My strain won all prizes at Urbana, O., Aug. 14-17, 1900, this season making 30 times I have exhibited in 8 years. No breeder ever made such record.

### Ten Times I Have Won Every Money Prize Offered. Eggs $3 per sitting.

500 cockerels—choice ones—for sale, and pullets in any number. I have a grand lot of show birds for winter shows. They never fail to win for me, and they will win for my customers. Residence, 363 South Fountain ave. Farm one-half mile from city. 265 acres.

**GEO. M. LEFFEL, Springfield, Ohio.**



## Every Poultry Raiser

well knows the destructiveness of lice and the difficulty of getting rid of them. Picking, dusting, powdering and dipping are not sufficient; the **WARY LOUSE** and the **NIT** escape.

Our Peerless Poultry and Animal Fumigator will, with a single treatment, kill

**EVERY LOUSE, FLEA, MITE and INSECT and destroy EVERY NIT.**

A great profit increaser. Worth many times its cost. Perfectly safe. Easily operated. Lasts a lifetime.

**B. CODDINGTON & CO., Berea, Ky.**

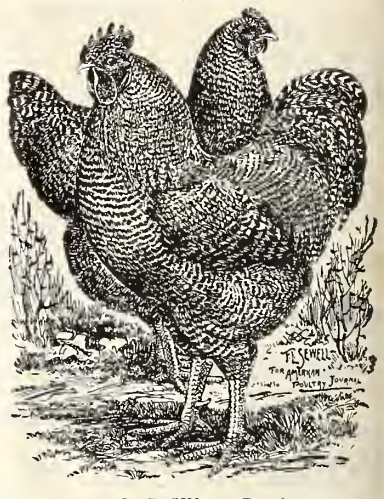
## *The Lanark Poultry Farm,*

***Lanark, Ill.***



I am offering eggs from my fine breeding stock, the balance of the season at $1 per 13; $1.75 per 26; $2.50 per 39, from the following varieties, or $5 per 100:

| | | |
|---|---|---|
| Barred Rocks, | Golden Wyandottes, | S. C. White Leghorns, |
| White Rocks, | White Wyandottes, | R. C. White Leghorns, |
| Buff Rocks, | Silver Wyandottes, | Buff Leghorns, |
| Black Langshans, | S. C. Black Minorcas, | C. I. Games, |
| Light Brahmas, | R. C. Brown Leghorns, | B. B. R. Games, |
| Buff and Part. Cochins. | S. C. Brown Leghorns, | S. S. Hamburgs. |

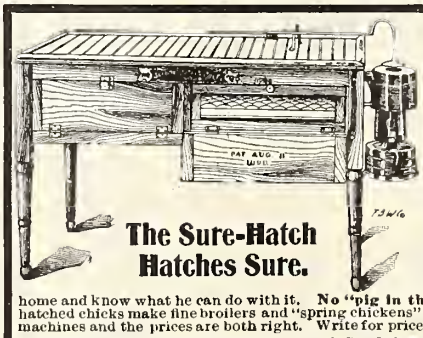
From the following varieties, $1.50 per 13; 26, $2.50; 40, $3.50; 100, $7.

| | | |
|---|---|---|
| Pea-comb White Rocks, | English Red Caps, | B. B. R. Game Bantams, |
| Dark Brahmas, | R. C. Black Minorcas, | Toulouse Geese, $2 per 7, |
| Black Cochins, | White Minorcas, | Pekin Ducks, $1.25 per 11, |
| White Cochins, | Blue Andalusians, | M. B. Turkeys, $2 per 9. |
| Houdans, | Buff Cochin Bantams, | W. H. Turkeys, $2 per 9. |

I want to call your attention to the fact, that there is no finer stock in the country than I have in my yards, and are prize winners and will produce prize birds for you, as well as for myself. All eggs are carefully packed and guaranteed to reach you in good shape, and true to name and to hatch well.

In ordering you may make up in different varieties in any number you wish. All orders are given prompt and my personal attention. I will have 1000 head of fine breeding birds to sell after July 1st, at the following prices: $2 single bird; $3.75 per pair; $5 per trio. Do not delay if you wish eggs from good first-class stock at reasonable prices. Order direct from this ad and save unnecessary corresponding. Address

***H. S. MARKS, Drawer E, Lanark, Ill.***



**The Sure-Hatch Hatches Sure.**

**THE Sure-Hatch**

has proven its right and title to the name by actual operation in the hands of thousands of poultry raisers everywhere. They have given such perfect satisfaction in the past that we have decided to

**Send Them On Trial,**

beginning May 1, 1901. This plan will give the purchaser the opportunity to try the **Sure-Hatch** at home and know what he can do with it. **No "pig in the poke" business here.** Remember that summer hatched chicks make fine broilers and "spring chickens" in the fall, when the demand is always good. The machines and the prices are both right. Write for prices, plans, conditions, etc.

**SURE-HATCH INCUBATOR COMPANY, CLAY CENTER, NEB.**

## S. C. BLACK MINORCAS.

Winners at Cleveland and Chicago. Won at Cleveland, January, 1901, cocks 1st and 2d, hen 3d, cockerels 2d, 4th and 5th, pen 1st. Won at Chicago, January, 1901, cock 2d, cockerel 1st and 2d, pullets 1st and 2d, hens 1st and 3d, pen 1st. Eleven years a breeder. Eggs in season. Stock for sale.

W. J. BOYD, Glenville, Ohio.

## Barred Rocks. Buff Rocks.

At Boston, 1901, our Barred Rocks won, 1st hen, 4th cock, 6th pullet, and our Buffs won 1st cockerel, 2d and 4th pullet. Eggs $3 per 13; $5 per 30. 40 Buff Rock hens for sale.

We want you to write us for prices on

# White Plymouth Rocks, Black Minorcas.

Our stock is second to none and our prices are low. We will **GUARANTEE** our W. P. Rock ckls. **not to turn brassy.** That shows our confidence in their pure whiteness, We are new advertisers in A. P. J. and want your trade. If you buy once you will again. We aim to please.

Please notice our new address **Mr. & Mrs. B. T. MATHEWSON, Elgin, Ill.**

---

## EPPERSON'S BARRED PLY. ROCKS

**and Mammoth Bronze Turkeys**

My birds are all farm raised. Will have five yards for 1901. Eggs, $3 for one sitting; $5 for two sittings. No more stock for sale until fall. Satisfaction guaranteed. Reference, Champaign National Bank. No turkey eggs for sale. Farm three miles from city.

***E. H. EPPERSON, Box 226, Champaign, Champaign Co., Ill.***

## Good Stock, Low Pricee.

White Wyandotte eggs for sale by the sitting or by the 100. Incubator eggs $4 per 100. For the rest of the season $1.25 per 15.

**MYRON KENDALL, NOVELTY POULTRY YARDS, Lind, Wis.**

## Wyandotte Sale New York Winners.

We offer 200 of our Golden and White Wyandottes at greatly reduced prices for the next 60 days. These are right out of our this years breeding pens, and such a rare chance is seldom offered. These include many of our New York winners and many other winners, every bird a fine one. Don't miss this. Eggs the balance of the season from our fine matings $1.50 per sitting straight. We have a lot of fine Belgian Hares, all imported stock, at very low prices. Large circular.

**IRA C. KELLER, Box 75, Prospect, Ohio.**

## I Will be Ready

to take orders for chicks at two weeks old after July 1st, and continuing only through July and August. I will sell a part of my breeders in order to make room for my young stock. There are five hundred now growing and you can find your prize winners in my yards. Send for circular.

**MRS. J. H. OREBAUGH, Batavia, Ohio.**

**THE LIFE OF THE INCUBATOR CHICK** depends upon the care given after it leaves the incubator. It is therefore necessary that you use a first-class brooder. You get this in the **WABASH BROODER**, simple in construction, built on honor, and will rear to a healthy maturity a greater portion of chicks than any other brooder made. Zero weather, a snow or thunder storm will not interfere with the healthy growth of your chicks if you use a **WABASH** brooder.

This Brooder is sold under a positive guarantee to be the equal of any made, and if it is not as represented in every respect your money will be refunded. Price $7.00.

**G. C. FLEGEL, Westville, Ind.**

## JORGENSON'S BARRED PLY. ROCKS.

My birds are winners in strongest competion. They are large size, elegantly marked and the kind you will be proud to own. In addition to other regular prizes won at Racine Show, I had 1st cockerel and 1st pen. First prize cockerel was pronounced by experts to be a duplicate of the first prize bird at Chicago. I have some **FIRST CLASS BREEDING BIRDS** for sale, and am accepting orders for eggs from my choicest birds at $2.50 per sitting.

**CHAS. P. JORGENSON, 922 Forrest st, Racine, Wis.**

Secy Racine Poultry, Pigeon and Pet Stock Assn.

## OAKLAWN POULTRY FARM.

If you want eggs that will raise birds good enough for any show room, place your order with me at the very low price of $2 per 13 or $7 per 100. 19 varieties. All birds used in our 1901 pens score from 90 to 95 points. Send 2 cents for catalogue in colors.

**W. A. McKEE, Box 100, Knoxville, Iowa.**

## FENN'S BANTAMS

# THE BRAHMA FOWL

## The Light Brahma--America's First Production--by T. F. McGrew of New York City.

THE whole world admits the Chamberlain origin of the *true* Brahma. Burnham and others claim to have been the originator of the Brahma but even the English refuse to give credence to these claims, which they took even more pains to disprove than we, and in their complete search for the origin they came to the final opinion that the Chamberlain Importation was in itself the distinctive and only original Brahma.

That the readers of this journal may know some little of their origin, we give below our own words that we have so often published. But while these words may be old to many they will be new to as many more who have never heard of the true origin of our Brahmas. We give you in condensed form the facts.

Mr. Chamberlain, of Connecticut, purchased, through a friend, a pair of fowls that came to the port of New York aboard an India trading ship, presumably carried by them for food. This pair of fowls was light gray in color, and they were the original stock from which all the New England Light Brahmas came. While these fowls somewhat resembled the early day Chittagong, by which name they were called at first but later known as the Brahma Pootras, they were quite unlike the Chittagong, and produced chicks quite unlike any previous importation. The stock from this pair of fowls gradually spread over the New England States, and from them came our present Brahmas.

The statement is often made that it is much more difficult to create than to imitate. This is quite true in many things, and while we unhesitatingly give willing homage to the originator, we must also pay our regards to those who made them what they are today. To. Mr. Churchman, of Philadelphia, to Mr. Joseph Wade of the same city, to Mr. Todd of Ohio, must go much early credit for the work they did in their behalf. All these gentlemen have retired from the fancy, as did the long-time hero, Mr. Comey of Massachusetts. All these have done their part and quit the fancy. But we still have active in the work the "old wheel horses" of Brahma fame—Mr. Philander Williams, who for many, many years stood as champion of Brahma Alley, and Mr. Isaac Felch, known the length and breadth of the whole globe as one of the "Brahma Kings."

Mr. George Fletcher has done much to aid in beautifying the breed, as have many New England fanciers. There was a time when the name of Purdue was a reminder of the originator of beautiful necks and laced tail coverts, he having done more for the production of these fine points than had any other fancier up to 1890; since that date there has been no one man who was able to win the laurels undisputed for a year. The keenest fanciers of the world are now contesting, inch by inch, the path to fame in Brahma Alley.

Of the new aspirants for public favor we shall speak without naming them, for while the highest honors migrate, year after year, from one to the other, it does not say that any one man has the best of all the world. The greater portion of all the good light Brahmas have for years been located in New England, but within the year great strides forward have been made in other localities, and extending as far west as Iowa we find yards that have gained great reputation for themselves. That considerable differences of opinion do exist as to what constitutes the true Brahma no one can deny. We have only to publish the following, from the pen of Mr. Hewes as part of his report on Light Brahmas at Boston, to convince every one of the wide differences that exist.

PART OF MR. HEWES' REPORT.

"The Light Brahma class was one of the largest ever brought out. Nearly all of the old timers had their stock on exhibition, including such men as Bumford, Keating, Fletcher, Shaw, Alshire, Whittaker, Foster, Rollins Brothers, Philander Williams, Wheeler and Oakland Farm. The birds shown by Oakland Farm were not in competition. Two cockerels in the single entries were unplaced, or merely given a complimentary mention. They deserved more than they got. I have no desire to criticise the judge in this class, but how on earth he got by these two cockerels was more than I could understand. If I had a selection to make from all of the good Light Brahmas I have seen in my life, I would certainly take the bird that Rollins Brothers exhibited. There was just one bad feature to the bird—the way he carried his wing. It was due partially to an injury, but not entirely so. He did not hold this wing up in trim shape, but the other sections, with his grand color—that intense black and pure white—with a shape that was almost above criticism, placed him in my estimation above any Light Brahma cockerel I ever saw. Mr. Bumford's bird was not quite as good in shape as Rollins Brothers', neither was it as good in color of back, but he was a grand one with few equals."

Addressing his remarks to the members of the New England Light Brahma club Mr. Hewes continues: "We westerners have come to you in past years for original ideas. We have accepted from you without contradiction your description of the shape of this bird, and we have no desire now to find fault with your instructions. At the same time I will state frankly that if you are now going to the Cochin shape in this grand breed, and are going to make prize specimens out of short backs, short legs, high tails and low breasts, then the western breeders are very liable to part company with you, and do it soon. We have not hesitated to pay you your price for good birds, and conscience knows your prices have been high enough. You have educated us to believe that the ideal Brahma male should have medium length of back and well-spread tail; that he should stand well up with plenty of daylight under him; that he should have clean cut color, both black and white, with a white back, and this is the type that is winning in the west. Now, if you really want Cochin Brahmas, well and good, but we do **not,** and if we cannot protect the true Light Brahma in any other way, we shall certainly form a Western Brahma Club that will protect the present ideal as we understand it.

"Another feature we would like to call your attention to is this: We do not want a hackle on the back of our Light Brahmas, that is, black or partly black feathers extending clear to the tail. A white back is one of the prominent beauties of the Light Brahma, and a bird bred

that way can have just as good color in neck, wings and tail as those with heavy striping or ticking on back and saddle, and so long as we can breed them that way why spoil the beauty of the breed?"

If it were possible to compromise all these separate opinions no doubt the greatest good would be the result; but there is no use to dispute the fact that New England is the home of the Brahma, and as New England wills, so the future of the Brahma must be; according as New England molds the winners, others will follow. We may halt and hold back, but like the returning of the waters of the Red Sea, those in its way having gone down, so must the opinions on Brahmas bow to the edicts of those who, for half a century, have produced the best.

### WHAT THE STANDARD LIGHT BRAHMA SHALL BE.

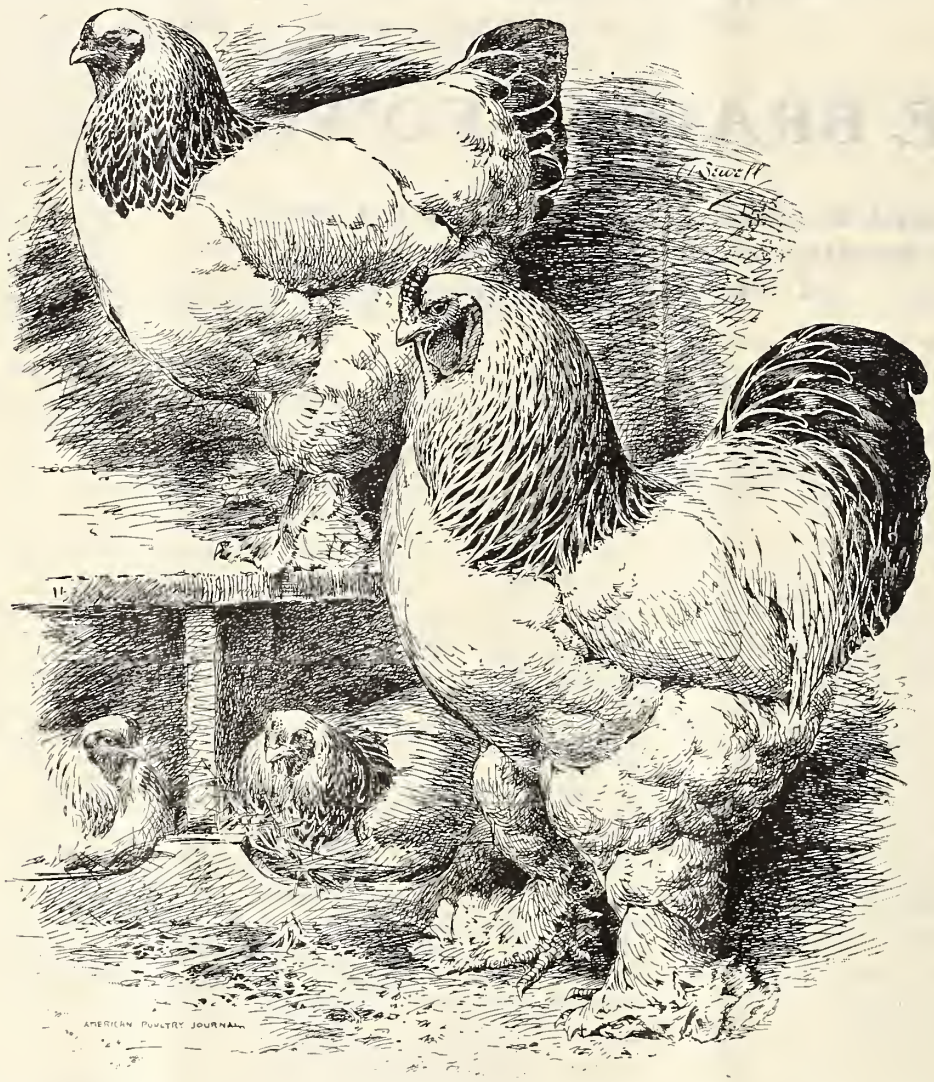
For the benefit of those who love the Brahma, we shall try to fully explain what, in our opinion, constitutes the true Brahma, as per the Standard, as interpreted by the best New England breeders, following the full wording of the Standard throughout the description.

### SHAPE OF THE BRAHMA MALE.

In describing shape we shall combine the several sections that unite to make any one portion of the fowl; as with head, we shall include all that clusters about it. *The head* itself should be medium in length and broad, the crown projecting over the eyes; beak stout and well curved. The most beautiful Brahma head to our notion is the one with the full round skull, rolling gently four ways from the center; the front rounding gently to the beak, while the rear rolls aft to the juncture with the neck to either side over the eye, forming the crown that projects over the eye. This projection should round off into beautiful oval form and not flatten out into a coarse projection over the eye. It is not unusual to see a head that looks large and coarse, simply because of the unusual flat prominence over the eye. Because a reasonable prominence over the eye looks attractive is no reason for an unusually heavy prominence which makes the eyes look as if sunken into the head. The well proportioned, nicely rounded skull is most beautiful; it gives the finished attractiveness to the whole bird.

The proper Brahma comb rests most gracefully upon such a head; the Brahma comb is constructed of three separate small combs, the center of the three the largest. All three are laid gently across the head from front to rear; all three of these combs are separate single combs that are low set and but slightly serrated, the center one the largest: All three join together; front and rear and are the widest apart in the center. The comb should follow the shape of the head and not stand prominently up behind. The comb of the Brahma is its distinctive mark, and belongs to them alone and should have great consideration.

The comb should be lower and narrower at front and rear, and the serrations should be less prominent at these points. Remember this when you see the big heavy lump rearing up behind or standing up in front, for such are deformities. You may hear the fault of little serrations condemned, but this defect is as naught compared with the unnatural shape and prominent projections fore or aft, or both. The comb must rest close to the beak in front and well down on the head in the rear.



IDEAL LIGHT BRAHMAS.

Drawn for American Poultry Journal by F. L. Sewell. These Are the Type of Birds Described by Mr. McGrew in the Accompanying Article.

OTHER HEAD POINTS.

The beak, as stated, must be stout and well curved; the eyes must be bright looking and bay in color. The eye of the Brahma looks attractive when nestled away under the proper skull projection, but when this projection is too extended the eye looks as if sunken into the head. This, we consider, detracts from the beautiful head; wattles of medium size and well rounded; earlobes large and pendant, the lower edge on a level with or slightly below the lower edge of the wattles; in some cases we notice the almost total absence of wattles and the earlobes lacking in fullness, both of which detract from the beauty of head points.

THE NECK.

The neck medium in length and well arched, showing the juncture with the head, back of the comb. It should arch to the body where the hackle should widen out and spread well over the shoulders and onto the back; the sweeping hackle should be pure white in color with a center stripe of black, extending fully one-half the length of the feather. This stripe must be of rich glossy black; it must follow the shape of the feather and not run out at the point; it must be completely surrounded with white, which must be clear, pure white and not edged nor tainted with any other color. This penciling or striping must extend up the neck, almost to the head and well around in front marking the entire neck plumage.

The absence of the black stripe in any of the neck plumage mars the appearance of the whole bird. A white collar in front is quite old fashioned and out of date. The beautiful rich glossy black stripe against the pure, true white gives the elegance of finish to the neck that cannot be gained in any other way, and when this black is laid on in unbroken lines it gives the neck, when opened up, a most beautiful appearance which cannot be had when poor or broken color lines are present on any of the feathers.

THE BRAHMA BACK.

This is one of the most important sections of the Brahma. The formation of the back has much to do in giving us the true Brahma type or the Cochin Shaped Brahma. Were the whole world to try its hardest, it would fail to compile another sentence so short of proper description as the one now used in the standard describing the Brahma back. We here quote it in full: "Cape broad and flat across the small of the back, which, with rear portion of back proper, makes a gentle incline to hips, where the saddle takes a concave sweep to high up on tail coverts. As to this, no one can claim that a long, a medium or a short back is right. If the cape is broad and flat across the small of the back all is well. But, what is the cape and the small of the back? We must see as to this.

The Glossary tells us that the cape is the feathers under and at the base of the hackle, shaped like a cape. Or, in other words, the cape is the black and white feather collar about the Brahma's neck under the hackle, and inside of this limit. It must be broad and flat across the back. This broad, flat cape must join with the rear portion of back proper in a gentle incline to the hips. Now, the intent of this, we presume, is to have the back from the shoulders to the hips raise slightly, or, as it tells us, to gently incline to where the saddle makes the concave sweep to the tail. In the absence of previous information or experience one might call this the description of a very short back. We should much prefer the description of back in the 1893 revision which calls for: back, broad, of medium length and flat at the shoulders; saddle, broad and rising with a concave sweep to the tail. But, above all, we should think the Brahma deserving of a description for back that would give length, breadth and full description of the entire back.

As the Standard now reads, no one has the right to find fault with the judge who selects the very short back; nor have we the right to complain should the long back have the preference. A Standard that ignores the length of back and body in its description, but tells us that the full fluff gives the bird a broad appearance naturally leads one to think that the Brahma has somewhat of Cochin shape.

One of the Plans of Poultry House on Sunnyside Poultry Farm, Wick, O., Owned by F. R. Simpkins, Youngstown, O.

BREAST, BODY AND FLUFF.

The breast is well described as: broad, deep, round, and full. This full description seems necessary for the breast, while body is simply deep and well rounded at the sides. Now note: "fluff abundant, giving the bird a broad appearance." Is not this a strong demand for the full feathered Brahma? Can any one honestly cry out against the judge who selects, as the standard describes? Was not the new Brahma standard compiled under the eye of the gentleman from the west, the wording of which was but slightly changed in but one clause at the Boston meeting? Can it be that this, like the Cochin Standard made at Chicago, calls for more fluff and feather than the compilers contemplated?

THE TAIL.

Medium in size, full, well spread, carried tolerably upright, filled underneath with curly feathers, sickles short, spreading laterally, coverts plentiful but not so long as to cover the entire length of lower main tail feathers. Now, as we understand all this the Brahma tail most admired is the full spread tail that almost forms a half circle to build out the saddle and make it possible for the saddle to make the concave sweep to the coverts. If the tail were narrow it would not be possible to have the much admired, well spread saddle. The cockerel so highly praised by Mr. Hewes and mentioned as being the best he had ever seen had this tail formation very marked. If this the style of tail that should be preferred for the Brahma, why not so describe it in the Standard.

One of the most attractive sections is the under portion of the tail when well filled in with curly feathers of beautiful color. In some specimens these feathers are as nicely laced about as the well finished coverts. Another feature of beauty is to have the coverts as handsomely laced about with white as are the hackle feathers.

LEGS AND TOES.

We shall only mention the shanks and toes in this section, to bring out their length and the feathering. Shank, medium in length, stout and set well apart; well feathered on the outside. Toes straight, stout, the outer and middle toes being well feathered. Shanks *well* feathered. Now, if we are to understand the Standard as it reads, the Brahma must be well feathered and have an abundance of fluff. Shall those who fol-

low this rule be condemned for so doing?

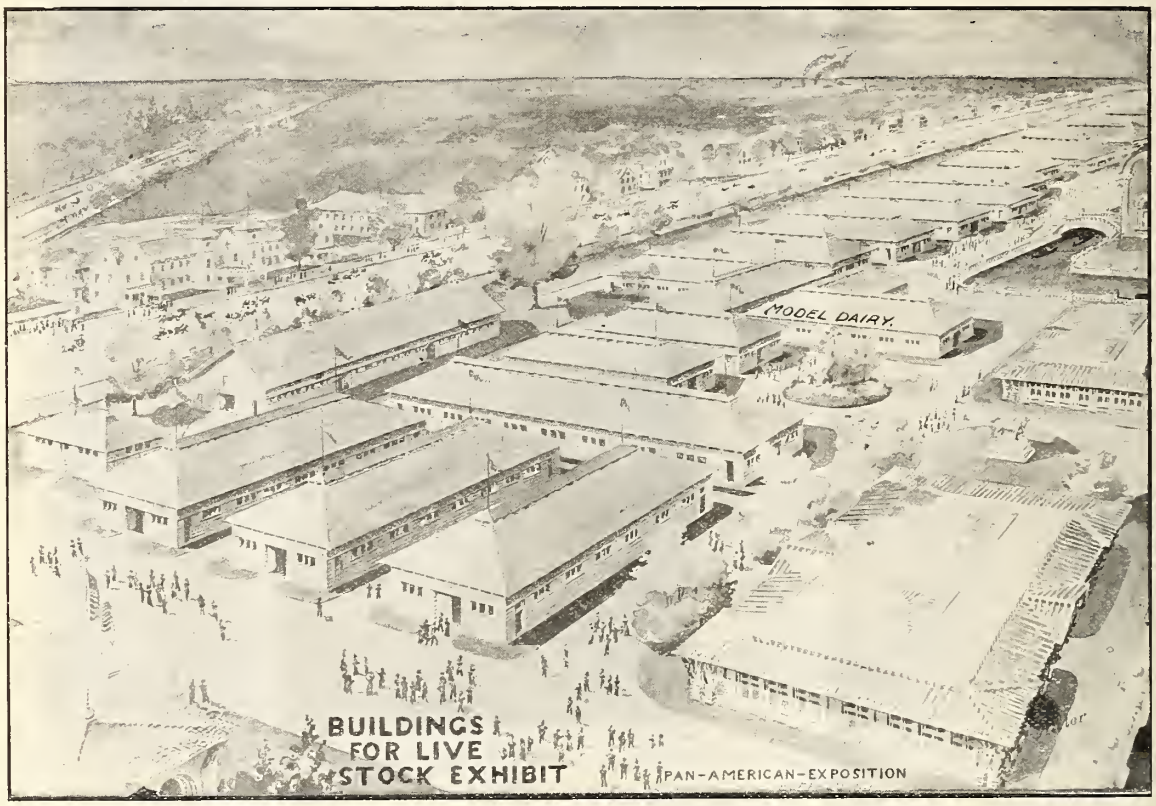
SPECIAL POINTS ON THE FEMALE.

The Standard description for female as to shape is little like the form demanded for males. There is no mention made as to length of back or body; but the same fullness of fluff and feathers is called for. We shall not take the space to repeat these descriptions. That the Standard calls for an abundance of fluff and full featheriug of shank and toes cannot be denied; just how much of this is desirable we cannot say. We stated in the *Country Gentleman*, more than a year ago, that the full feathered Brahma was on the way and that it was none too soon to consider the question as to just how much feather was desirable to have, for the best interests of the breed. One feature of great beauty in the Brahma female is a well formed head, comb, earlobe and dewlap; when right and best for the breed's future welfare? In what way can we best preserve all the good Brahma qualities they now possess, and improve them in exhibition and utility qualities? For unless both are maintained in the highest degree, the Brahma must lose much of their grandeur and popularity.

THE BRAHMA COLOR.

The real beauty of this parti-colored fowl is its rich distinctive black and white which must be clean cut and free from all shading or discoloration or intermingling one with the other. And, above all, we should have the clean white surface of body color. There is entirely too much indication of black in the back plumage of both male and female, some of the male birds showing so much black striping on the saddle as to look like a striped saddle at a is far from the proper neck markings, as the entire hackle plumage should be striped with the black.

The neck plumage under the throat and hackle should be white. The hackle plumage of the male must be clear white with a rich glossy black stripe or center that extends more than half the length of the feather from tip up. This black must be unbroken from beginning to end. It must follow or conform to the shape of the feather. It must not run out at the point, but must be entirely surrounded with clear pure white entirely free from any dark edging or shading of any kind. The black must be rich glossy black and the white pure and true, and the feathers so laid on the neck as to make the handsome blending of black and white presenting an unbroken appearance, whether properly in place or raised for underexamination.



View of the Live Stock Division of the Pan-American Exposition, where the Poultry Exhibit will be held Oct. 21 to 31.

the latter is nicely proportioned and the skull is rather wide and nicely rounded over the eyes, and the well curved beak seems to support the gracefully hanging dewlap which seems to divide the upper part of hackle plumage, you have a head and its belongings which gracefully adorns a well balanced Brahma. In addition to this, the very best have prominent full round breasts and beautifully formed backs and tails. All are indispensable belongings to a highly bred Brahma.

Personally, we rather prefer considerable fluff and feather about the under part of the Brahma: To our notion, the more feather the better, providing the proper Brahma lines and contour are maintained. But the question is not one of personal preference. The only question worth consideration is, what is little distance from the bird. Simply because this is not a disqualification is no reason for its encouragement.

The yellow beak and shank and the clear bay eye are of equal importance with a rich healthy color of comb, face, wattles and earlobes. All these add to the trim attractive appearance that counts so much in favor of the specimen possessing them to the highest degree. The head plumage of both male and female is pure white. This white often extends down the neck much further than it should. The closer to the juncture of head and neck the black striping comes the better for beauty and finish. In many of the male birds, also the females, there is a white collar about the neck that runs down the front of the hackle about the throat, much like a kerchief on a woman's neck. This The striping must extend to every feather of the hackle clear round in front. Unstriped hackle feathers about the throat are quite a defect, and the hackle of the male should be long and well spread out over the shoulders. The long, full, flowing hackle of rich, clean cut colors is most beautiful.

The neck hackle of the female, beginning just back of the head, must be of rich black edged with white. The feathers of the neck hackle must be large and round rather than oblong, the center intensely black and the edging all around clear pure white with no discolorations. The black must conform in shape with the feather and the white edge must be uniform and true. Broken neck color is so grave a fault that it should discard a female that was not overwhelmingly strong in other sections.

BACK AND BODY PLUMAGE.

The back and body plumage of the Light Brahma should be white. We know full well that some appearance of black in back of female and striping on males are overlooked, but we feel that the time is at hand when the line should be drawn in favor of white backs. If this encroachment of black in back is to be encouraged there will be no limit to it, and it is due to the whole fancy that this and extended hock feathering be discontinued on our Light Brahmas, and that we have the clear surface color of back and body and the well rounded hock that belongs to them.

There is no excuse for taking the middle ground on these two points. We must either stand for the white surface color or accept a badly marred one; we must either demand the round hock for the Brahma or see them drift toward the rough hock, like the Cochin; leniency is the surest road to the acceptance of any fault we become familiar with. Unless all these shortcomings are stamped out they will grow like the weeds in neglected soil and overrun the whole breed.

While the preference of the Standard is for white under color, bluish white or slate is allowed, and in many cases it is so very dark one shudders to delve below the surface fearing it must be called black. We hesitate to take sides for or against this very dark under color as it may be useful in the breeding pen, but we feel that the show pen behind a prize ribbon is not the place to find it. If we must have it for the breeding yard, there it should stay and not be brought to the show room for display.

THE WINGS.

The tendency is for almost solid black flights in both male and females. Truly this is very handsome, also quite scarce, and when it is found, it is in a specimen that is usually very dark on back and under color. If it is possible to have the rich black and white in hackle, the clear white back and body plumage, with the solid black flights, we strongly favor them. But we presume it has been our good fortune to see the majority of all the best Brahmas shown the past eight years, and we must make record of the fact that not ten per cent of the whole lot had solid black flights with the white edge on the lower web, and but few of those that did have the black flights had clear back and body color. We have heard it stated that they breed them in the west, in abundance, and that they have all these points in perfection. If so, they must be bred beyond the limit of the Chicago show for not ten of this type have been entries in that city for three years.

When it is said that the flights are black or *nearly* so, it is quite different to solid black flights. We can find plenty with some white in flights and good surface color; but we again state that if there is any white in the flights at all other than the one edge, they are not solid black, and we presume that the plenty of them that are bred in any locality are the "nearly so" kind. *With the females,* black and white is the rule; the black to predominate. This is by far the safer rule, especially if we hope to have the nice laced coverts and nice lacing upon the feathers that fill in under the tail. There is no use to try to make one's self believe that the pure surface color can be maintained if we expect to have so very much black in neck, flights and tail.

THE TAIL.

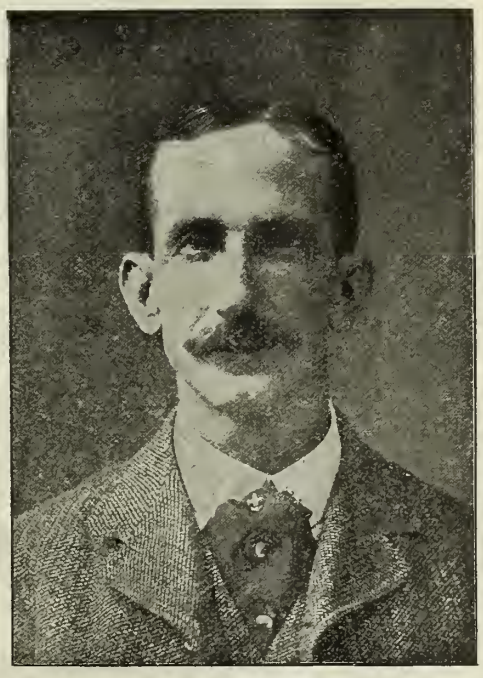
The rich, glossy, black tail of the male, surrounded by the lesser coverts that are edged with white, is in natural conformity with the tail of the female, which has its surrounding of beautifully laced coverts, some of them of rich, glossy black, growing well up into the main tail, like a double row border all about the tail. This same white edging often adds beauty to the upper main tail feathers of the female by edging them about. We shall here mention specially the tail formation as found upon the female and as it should be.

The tail of the Brahma female should not be over large, but it should be well spread into an inverted A shape. This spread of the tail helps to build out the back into proper form. When too long it presents an unattractive appearance; when narrow or contracted it spoils the whole posterior effect. When carried low it makes the back entirely too long and when too high it gives the unnaturally short formation of back that looks much worse upon the female than the male. It is most necessary that the Brahma female should have the perfect back and tail or else the whole beauty is gone.

THE LEG FORMATION.

The Brahma male should stand square and solid upon his pins. There should not be any stoop or bend to the shanks at the hock joint; neither should they come together between the legs. The strong full body should hold the legs wide apart. What we term "knock knee" is very bad, and when they have the tendency to bend back at the hock it gives them the stooped appearance; the shank from the hock joint should stand plump, giving them the natural Brahma carriage and not the forward position that belongs to the Cochin.

The deep, full body of the female rather hides a considerable portion of her legs, but the stooped appearance is not proper in her case any more than with the male. Do not gain the idea that the Brahma should have the carriage of the game fowl, nor that they should droop like the duck; but they should have in the strongest degree the true Brahma shape and carriage.



GEORGE H. BURGOTT.
Superintendent Poultry Department Pan-American Exposition, Buffalo.

## FOREIGN TRADE.

IOWA FALLS, IA., 6-13-91.

*Editor American Poultry Journal*:

I note what you say in your May issue as to trade with Alaska. A short time ago I made a consignment of Houdans to a customer in Skagway, Alaska. The AMERICAN POULTRY JOURNAL made the sale. To-day I am sending five head to St. Petersburg, Russia. The AMERICAN POULTRY JOURNAL made the sale. Have an inquiry, just answered, from a party at Port Moraut, British West Indies. The AMERICAN POULTRY JOURNAL brought this correspondence to me. It would appear that the way to sell poultry in the U. S. and in all other parts of the world is for the breeder to cary an ad in the AMERICAN POULTRY JOURNAL. Looks that way, does it not?

*Thos. F. Rigg.*

## HOW TO MAKE EGG SOUP.

Stir a teaspoonful of beef extract into one quart of boiling water; add a grated onion, an eighth of a teaspoonful of celery seed or a little celery chopped, half a teaspoonful of salt and a saltspoonful of pepper; stir constantly until it reaches the boiling point; strain through a fine sieve and pour it while hot into the well-beaten yolks of two eggs. Add four tablespoonfuls of carefully boiled rice and serve very hot. — *April Ladies' Home Journal.*

# Bowel Trouble in Chicks.

By Jno. M. Sontag, St. Charles, Ill.

FIFTY per cent of the chicks hatched in incubators and placed in brooders die of bowel trouble. Why is this? We believe it is because nature's laws are not followed. If a chick is strong enough to break the shell, it is strong enough to live if it gets half a chance. I would not give a penny for a chick that was hatched on the 22d day nor for a chick that must be helped out of the shell. No care can save them, not even a hen. A chick should pip the shell on the 20th day and be hatched on the morning of the 21st day, I have followed nature for years in this respect and have made it a study and have seen hens steal their nests and hatch every egg, not only one hen, but I have had fifty in my time. I had four hens steal their nests last year and they brought off 56 chicks.

For an experiment I never watered the chicks or fed them until four weeks old; they were hatched in June and July; the nests were half a mile from the dwelling house and under a fence covered with wild grapes. I had a half dozen colony houses all over the farm which gave the hens a chance to hide their nests. In the case of these four hens I was familiar with the location of the nests but did not bother them and as near as I could ascertain the hens left the nests on the second day after hatching.

In June as we well know there is nothing much for chicks to eat except seeds and bugs and nothing to drink except the dew in the early morning.

I also had five turkey hens steal their nests and my experience that season gave me a good chance to experiment. Another condition affecting matters was that we had quite a number of heavy rain storms during the months of June and July. Now for results, which were: Every chick was raised and seventy-two little poults, notwithstanding the fact that I never fed or watered the youngsters until they were four weeks old and did not then supply food and water to the poults, as the turkey hens roamed all over a 300-acre farm and never came near the home ranch until late in the fall. They roosted in trees, on fences, etc.; my neighbors as well as myself tried to raise turkeys at home, but were not successful in raising more than one-third of what were hatched.

With the chicks I raised 90 per cent and over, and in one case 98 per cent of 200 chicks. And this season I have only had two die out of 106 put in one brooder and they are now three weeks old and past danger.

HOW I FEED TO PREVENT BOWEL TROUBLE.

We will suppose that the chicks leave the shell in the incubator on Sunday. We allow them to remain there until Tuesday morning, when they are taken out and placed in a brooder. It is necessary that they become accustomed to the mother, but a few lessons will teach them this, and if I have no time to work with them to see that they do not get lost or chilled, I take a piece of galvanized iron 6 inches high and 100 inches long; I bend this in a circular form around the mother leaving a 2-inch space all around between the mother and galvanized iron; this is so the chicks can get into a cooler temperature and still not get lost.

On the brooder floor I always keep two inches of sand; the chicks will eat the sand like wheat, and when they are 60 to 70 hours old I feed them their first meal, and I desire to call special attention to the fact that they are 60 to 70 hours old before they are fed. Nature has provided for the chick for four to six days by furnishing the yolk of the egg. To demonstrate this take a five to six day old crippled chick or one which can be killed without loss and you will find the yellow of the egg in the stomach. This proves that just as long as a chick has this it will live and it will not starve or even be hungry.

The cause of so many chicks dying and having bowel trouble is indigestion; they are fed too early. This I can prove to you in a half dozen different ways. Why do not the chicks have bowel trouble when running with the hens and looking for their own food? Why are birds in a wild state not troubled in this manner? They get their food often and a little at a time; it is a seed here and an insect there and so on until at night their crops are full of nature's food.

I have lost as many chicks as any large breeder in America for the last fifteen years and have tried all kinds of food, and have experimented upon how much to feed and when to feed and what kinds of food are the most suitable.

When the chicks are 60 to 70 hours old I let them out in the grass and sprinkle dry bread crumbs amongst them; in about an hour I give them a little dry oatflake; I give them just a little of that and they will run aronnd over the grass looking for insect life. They seem to find food material of this kind which is not visible to us. About two hours later I give them a little millet seed and grass seed mixed, then in about three hours or at night I give them fine cracked corn, not corn meal but cracked corn and milk that has been boiled; boiled milk and milk curds are the best preventive of bowel trouble. I give them milk until they are ten days old; some prefer milk to water but if water is given it should be warm. The next day at 6 a. m. I give them Johnny cake, about three hours later I feed them cracked wheat. At each meal except at night they are given about a half crop full and at night a full crop; never give them a crop full of feed at any other meal, and never feed the same food twice the same day; change at each meal and give a little at each meal; then you are following nature. One-third crop full is a great deal better than a full crop. A hungry chicken is always a healthy one.

When a chick is weakly, hangs its wings, stands listless and is slow in walking and in fact seemingly blind to the world, it is suffering from indigestion and the cause can be put down to over feeding and too early feeding after having been taken out of the incubator. The chick in some respects resembles a baby. If an infant is fed for the first meal meat, potatoes and pastry of all kinds, it will not live long, because it is not nature's food, and this same rule applies to the chick; they should have a little of everything and very little of anything. This method we believe is a successful one without any doubt.

Cracked corn strengthens the chicks. I feed them this and consider it one of the best grain foods we have. Milk curd is my favorite food for newly hatched chicks, that is, when they are from 60 to 70 days old; oatmeal, Johnny cake and dry bread are also good articles of food.

I allow them to run out on the grass as soon as I possibly can and when six days old I give them free range.

I keep the heat in the brooder at 98 degrees two inches from the floor and keep it at about that point until the chicks are full feathered. Most breeders reduce the heat one or two degrees each day until it is about 70 degrees. I fail to see any good reason why this plan should be followed.

A hen when she broods her chickens has a temperature of 98 degrees, or blood heat. We believe it is not more necessary to reduce the heat in a brooder than it would be in the case of the hen as she broods the chickens when they are six weeks old. If your brooder is arranged like mine the chicks can go where they like, as regards the temperature. They will find it from 70 to 100 degrees.

We advise against mixing grit in food and against feeding mash. A fowl has a gizzard and grinds its own food and when the gizzard is idle the engine of the chicks stops and finally the stomach gets out of order. Mash food has caused more diseases than any other one thing. In the first place it is not natural; the gizzard must keep grinding food, and if mash is fed the food passes through without being ground. The chick also over eats and suffers from indigestion.

There is much in the kind of heat in a brooder as well as the amount. A brooder should have a natural heat and not a hot dry one; there should also be fresh air coming and going at all times in the mother. If you will examine the chicks found dead in the brooder you will find their legs are all dried up. The hot dry heat has this effect on the blood and lungs, as a hot air furnace does upon furniture, etc. This kind of heat is not healthy for man or fowl.

On rainy days the brooder should be inside for chicks that are only two weeks old so as to keep them dry. They should be given the run of a large room, for keeping them locked up in a brooder will play havoc with them. There should be an in-door brooder for this purpose until chicks are 18 days old, and they should then be put in an out-door brooder, as they are old enough to help themselves.

## PHILADELPHIA MARKETS.

Live fowls, 10½ to 11c; old roosters, 7c per lb; spring chickens (2½ to 3 lbs to the pair) 20 to 26c per lb; spring chickens (3½ to 6 lbs to the pair) 15 to 18c per lb; dressed fowls, 9 to 10c; old roosters, 7c; spring chickens, 20 to 30c per lb as to quality.

# PARTRIDGE COCHINS.

**Down-to-Date American Bred, Standard Type, Evolved from the Old-fashioned, High-Stationed, Close-feathered Type--The New and the Old Compared --by W. H. Harrison, Jr., Toledo, Iowa.**

THOSE who have been attending our largest poultry shows are aware that no variety of Standard-bred fowls has shown more rapid improvement during the last five or six years than Partridge Cochins. For a period of fifteen or twenty years they practically stood still.

That always means, in a variety of chickens, as it does in the human family, really going backward. During these years the Buff Cochin breeders kept improving their favorites and crowding them to the front, making them more attractive year by year, until they became the center of attraction for the visitors at the great poultry shows. The Partridge Cochin breeders could not help looking with envious eyes, or feeling jealous of the attention shown the Buff rivals; and they were forced to acknowledge to themselves, if not to the public, that the modern Buffs were Cochins in shape and in feathering, and that their own favorites were simply Brahmas and Langshans, without even Cochin feathers, except in color. The greater part of the Partridge Cochins then to be seen in the shows were almost as close feathered as Games; that was the predominating characteristic of the Partridge Cochins, as they were produced and shown for many years; but still the American Standard of Excellence, required on all varieties of Cochins, a great profusion of long, lose plumage, with a great abundance of downy fiber in the under feathering.

Occasionally a breeder would import from England, but the English birds were so much lighter in color, both male and female, with such light feather stems and under color; and although well feathered, the breeder would lose patience in endeavoring to assimilate the two types and evolve a bird that would have any semblance to the colorings demanded in this country. Then the imported birds (whether we got the culls or the fashionable types from England, I know not) had such coarse hocks, if not true vulture hocks, that they were abhorred in this country.

In the face of all this it can scarcely be wondered that Partridge Cochins fell behind in the race for improvement; or that many breeders who knew what they wanted, but were not able to produce it, gave up this variety for others that could be produced with less effort. However, the wheels of time were speeding on toward the twentieth century. Advancement and improvement were in the air. There were breeders who were not content to let this most beautiful of all varieties of standard bred fowls lag behind any other in the development of ideal qualities. The task set before them was a difficult one. It has been accomplished. Today the best Partridge Cochin breeders are not ashamed to have their birds in the shows, stand by the side of the best Buff Cochins in the country. In fact, in some of the large shows recently held the Partridge Cochins were superior to the Buffs in breadth and shape of breast, back and saddle, and also in tail shape.

To Mr. Sharp Butterfield of Canada, is due the credit of stirring up the western breeders, by making them realize the necessity of breeding for shape, as well as color. It was at the Mid-Continental show at Kansas City in 1895, a noted breeder exhibited a Partridge Cochin cockerel that had won first prize at several shows, with a score of 95 and 95½. Mr. Butterfield gave him a score of 88, and in answer to a very vigorous protest of the owner, showed that his cuts were all "easy." That same cockerel today, the way our best poultry judges now cut for defects in shape of Partridge Cochins, would not score over 85. It is impossible to have correct shape in Cochins without standard feathering. Some breeders still cling to the old type of close feathered high stationed Cochins. It is simply an impossibility for any judge to give such birds a high score, if he applies the standard on shape, and makes reasonable cuts for defects.

In order that the reader may better comprehend the great advancement that has been made in this variety during the past five years, the editor will print with this article photo engravings made from photographs of some birds in my yards—"Grand Duchess" and her son, "Indian Prince." They are both, down to date, ideal Partridge Cochins in shape, feathering and color. Those of you who have made the attempt, know that it is impossible to get a photograph that will do a bird justice.

The editor will also publish cuts of a cockerel and pullet, such as he used in the JOURNAL five years ago. They are a fair representation of the type of birds then to be seen in Partridge Cochin row, in the poultry shows, and in the breeders' pens. They were not Cochins at all in shape, but were Brahmas and Langshans in type, close feathered all over, with scant feathering on hocks, legs and feet; long necks, long backs and long tails. To evolve the modern down-to-date Cochins from such birds and still avoid the light English color and light under color and light feather stems and the purple barring on the black feathers, so prevalent on the English Partridge Cochins, has been a difficult task, requiring patience and skill in mating.

The high stationed type of Partridge Cochins as bred a few years ago excelled only in color. The females had the rich mahogany shade, dark feather stems, dark under color and dark backles. The males also had dark hackles, backs and

saddles with dark feather stems. The first cross of English blood upset all of these desirable points, and gave birds with narrow, long vulture hocks. Such birds were unattractive and undesirable. A very few of the American breeders have persevered, keeping the ideal type ever in mind, until they have produced birds very near perfection from the most ideal standpoint.

A writer in one of the poultry papers recently referred to the Partridge Cochins, as now produced by the best American breeders, as "English, you know." He would not have written that if he had ever seen a pair of English bred and a pair of down-to-date American bred Partridge Cochins standing side by side. To American breeders alone is due the credit for the production of Partridge Cochins that are ideal in shape, feathering and color.

PARTRIDGE COCHIN HEN "GRAND DUCHESS."

PARTRIDGE COCHIN COCKEREL.
Old-Style, High-Stationed, Close-Feathered Type.

The photo engravings of "Grand Duchess" and "Indian Prince" are shown in this connection, because they represent the down-to-date ideal type. The hen, twenty months old, shows extra length of feathers all over; with a great abundance of downy under feathers. She has short shanks, but the great length of feathers makes her shanks appear shorter than they are. Her breast is low, broad, deep and rounded. Her back appears very short, with a very high rolling cushion, almost hiding her tail feathers; dark rich hackle with green metallic black stripes. She is grandly penciled, and of that metallic shade demanded in this country.

"Indian Prince" is an ideal type of the Partridge Cochin male; short shanks, full soft hocks, broad back, broad full rounding saddle; the tail being a round bunch of soft flowing feathers; breast low, broad and full; hackle, back and saddle rich dark red; body very broad and round, with rich metallic green black feathers, without a light feather stem or a tinge of purple on him.

"Indian Prince" was scored last January, when he was six months old, at St. Louis, by Sharp Butterfield. The editor has the score card, but informs me that he cannot have it photoengraved because it is printed on bright yellow cardboard, and yellow, in a photograph, shows up black. On account of being so young he still had part of his chick feathers and none of his feathers have received their full growth, which gave him cuts that he would not now be entitled to.

PARTRIDGE COCHIN PULLET.
Old-Style, High-Stationed, Close-Feathered Type.

He was cut 1 on weight. The shape cuts were: Comb ½, neck ½, back ½ and body ½. The color cuts were: Eyes ½, thighs, shanks and toes ½, wings ½, body ½, back 1 (chick feathers that have since moulted). This left his score 94; which was very high, considering the age of the bird and the fact that Judge Butterfield is not noted for giving high scores.

The demand for such birds as "Grand Duchess" and "Indian Prince" cannot be supplied by the breeders who are growing this quality of Partridge Cochin at $100 a pair. You can buy thousands of the old type for $1 each.

Are you satisfied with the old type or are you growing the best?

Are you behind the times or are you aboard the twentieth century car of progress? *W. H. Harrison, Jr.*

*Toledo, Iowa.*

## As to June Chickens

With some persons, and with some varieties, the question of size and weight is an important consideration. That it is hardly possible to make a June hatched Brahma, Cochin or Langshan come up to the weight of a March hatched bird of either variety named is granted. But there are other considerations besides bulk that enter into the question of successful poultry keeping, one of which is that of egg production. We cannot have a continuous supply of eggs if we do not have hens or pullets hatched during different periods of the year. The late hatched pullets make excellent summer and fall layers the following season is well known to all experienced poultrymen. For this reason a fair proportion of our females in the poultry yard should be late hatched.

There are many varieties that attain their natural size, regardless of the season hatched. With such the question of weight does not signify. They are the small, light weight class, familiar to every fancier. They may be hatched all through the year with satisfactory results.

The June chicken is a wanderer. It should be given all the liberty possible, so that it may range far and wide. The precaution should be taken, however, to have a place, or several places, of refuge convenient in case of rain. The sudden and flooding rains that come up in June are apt to drown the unprotected chicken. Thousands have been lost in the past and many a fine brood is drowned every summer for want of some sort of protection from the wet, the drenching rains of this month and July. This may seem a small matter to some, but it is not, when a full knowledge of the loss from this source is understood. I remember in one instance where over fifty nice chickens, nearly large enough to eat, were drowned in one night in June. They were in the old style slat coops, with carpeting over one end of each coop. The wind blew the carpeting off and the flooding rain drowned every single one of them. Rainproof coops are certainly necessary to success in raising summer chickens; and coops so placed that the chickens may get to them quickly in the daytime, too, if necessary.

A liberal use of some good lice killing mixture is also an important feature in the successful management of late hatched chickens. H. B. Geer.

# Success With Turkeys.

*By S. B. Johnston, Boggstown, Ind.*

WHAT is correct feeding? I do not know and I do not believe that anyone else can tell. What I mean by this is that I do not believe anyone can tell the exact quality and amount of food his or her flock should consume to maintain its flesh at all times of the year and to keep in the best of health, produce the most fertile eggs and raise tbeir young in the shortest possible time. The term, "Correct Feeding," means a great deal. The methods of feeding should be on a more scientific basis and more practical and there should be more actual experience taught in our poultry journals, in which we find so much of a trashy nature. Many of the articles on feeding, breeding, mating and general care of the flock are imagination and are not written from practical experience, and when some one does write from experience, the teachings are worth something. From articles of this character we can learn of the writer's surroundings and conditions and can learn to avoid his mistakes and profit by them, which enables us to climb farther up on the ladder of success. I have made a fair stagger at success, but there is much more in store for me. Our fowls of today are far above what could have been expected a few years ago and time only can tell what future developments will be. The national bird, "the turkey," has been sadly neglected, but it has and is gaining in popularity with each year. It has many admirers and brings the farmer and market man a vast income, aside from what the fancier and breeder puts on the market. It is the fancier that has made the turkey what it is today. Only a few years ago a turkey tom that attained a weight of 30 lbs. was thought to be a monster, but now the Bronze turkey attains this weight by the first of January and last season I had two toms that weighed 30 lbs. at Thanksgiving. I had one bird which tipped the scales at 40 lbs. when nine months old. While these extra heavy birds are desirable, I would not advise any one to use them for breeders. The time is not far distant when the Standard will not call for such heavy-weights as it does at the present time. The medium sized birds with plenty of vigor, fine markings and good typical carriage is the bird that a breeder will want, but we must not lose sight of the practical side of tbe question. One should be careful to select his best layers, as the egg yield is what makes the business profitable and the strain that produces the most eggs will, of course, be the most popular and profitable one. The young turkeys when they have a limited range should be fed regularly, if not, they will suffer greatly on account of the neglect. They grow faster than chicks. The plumage especially develops faster and they require a great deal more nourishment and must have it at regular times. When they have free range, however, they learn to provide for themselves a great deal better. I bave a letter from a Georgia breeder stating that he set fifteen eggs from the first laying and that he feared he would not get a single youngster. He wishes to know if the tom would be all right for the second laying, as he was bought too late for the first laying. I am inclined to believe that the tom is not of any value, for if he was the last part of the first laying would be all right and fertile. I have an inquiry from Wisconsin asking for advice in regard to the sitting of turkey eggs in an incubator, also how long eggs will keep and hatch well. It is perfectly safe to place turkey eggs in an incubator if one thoroughly understands the machine and can operate it, but we would not recommend putting the eggs in the machine under any other conditions. The eggs may be kept three or four months, if kept in a cool place. About 55 degrees is about the proper temperature. One of the best hatchings I ever had was from eggs, a portion of which were five weeks old. Tbis was when I first began to raise turkeys and had only three hens, which necessitated my saving the eggs this length of time. Every one of the eggs produced a poult.

WHITE MINORCA PULLET.

## THE RUNS.

The breeding stock must, of necessity, be confined in the pen runs until June 1st, and in a great many instances may occupy these runs the entire summer. This is true in most cases where fowls are kept in town. They must and by right should be allowed to retreat from the summer sun's scorching rays. The following is the plan I have found profitable and successful in every way: In these runs I planted plum and cherry and apple trees. The trees were placed in a row in the center of each pen. They were planted more closely than is usual, or, in fact, best, when planting for a commercial orchard, shade being the first consideration. The plums and cherries were placed 12 feet apart and the apple trees 20 feet apart. The plums and eherries have made exceptionally rapid and vigorous growth, and have annually yielded a very heavy crop—a larger crop by far than the same variety and number of trees in the ordinary orchard on the place. There is, of course, a good reason for this. These runs are sown to blue grass and clover. The ground is cultivated for a short distance on either way from each tree. In these spaces the bens scratch and wallow. In fact, they do most of the cultivation of the trees. Thus they benefit themselves and at the same time aid the trees to growth. The fowls keep the plum trees free of the curculio whieh annually destroys such a large per cent of the fruit on trees in the orchard. Occasionally each plum tree is jarred by striking and the curculio falls to the ground and is quickly gathered up by the fowls. The apples and cherries are also kept free of insects by the busy fowls. Nearly all insects which infest fruit trees have their origin in the ground immediately surrounding tbe trees, and the fowls will soon learn of the presence of these insects and continually scratch for them. I have proven by actual tests that plums and cherries in the poultry runs will far outbear trees in the orchard. Along the sides of these runs I planted currant bushes. In a very short time they make a dense shade, and here the fowls can enjoy the shade and wallow in the comparatively cool ground. True, they get much of the fruit of the currants, but it does them good and is a profitable feed. Each fall these rows of currants are heavily mulched with straw and manure. In front of each row a 6-inch board is placed, the full length of the row. This prevents the fowls from scratching the litter out, and here in summer they find employment and constant exercise in scratching in the mulching. In all, it is a profitable plan and one which combines many advantages which are apparent to all. A pen so planted is an ornament to the place.

# Brooder Chicks in June.

By G. C. FLEGEL, Westville, Ind.

It is a question with some as to whether it is easier to raise chicks by the aid of brooders in June than in April and May. My experience has taught me the preference if any is in favor of June. Yet May and June differ but little for the reason that the weather in this part of the country is about the same.

I prefer these two months above all others, to get the chicks started.

The ground is now warm enough to let them have free rein all the day through from the time they are hatched. All that is necessary to be done is to see that there is a small amount of heat in the brooder especially early in the evening so that the space under the hover may be warmer than the other compartments of the machine. If this is done there will never be any trouble arising from crowding as all will go under the hover, otherwise they are very apt to crowd into a corner and the result is dead chicks in the morning. As to the manner of feeding in June—that depends—yes on a good many things,on the location for one, and an important one, too. If the chicks have a fine shady grass run they will be able to pick up enough bugs, worms, etc., to provide them with animal food and the grass will furnish the green stuff. Then as to the other foods I would give them anything I had at hand in the shape of grains but would endeavor to use good judgment in the matter and give them a variety. There is one grain that is good if fed in moderation and bad, very bad if fed heavy, that is millet seed. Don't feed too much of it as it is one of the things that a little goes a good ways. It has always been a query with me how some people succeed in raising poultry at all by the aid of brooders. Here is an illustration: A few days since a lady was asking me a number of questions regarding brooders, and of course I was doing my best to enlighten her, when she suddenly asked, "Now, Mr. Flegel, can't I raise Pekin ducks and Leghorn chicks in the same brooder at the same time?" I did not enter into a long discourse on the subject but told her I had never tried to do so but thought if she tried it that the result would not be satisfactory. This simply illustrates the peculiar ideas some people have of what a brooder should be made to perform and also shows the chief cause of so much of the unsatisfactory experience of many with their brooders. If a brooder is handled intelligently there is no reason for the great mortality which so often occurs among brooder chicks.

I may be a crank on the matter of capacity, but experience has taught me and is teaching others every day that the policy of rating the capacity of brooders up in the hundreds is the one great cause of the high death rate of brooder chicks. That this particular point is being appreciated by the general poultry raiser is noticed in every conversation I have with practical men.

An old gentleman, one who is a practical poultryman, remarked in my hearing a few days ago: "If you want a brooder that will raise 50 chicks buy one that is rated at 200." A more truthful assertion was never made.

By comparing talks I have had with those whom I have met on practical poultry raising I have found there is little difference in the results obtained by practical men or women, they having obtained their knowledge by practical experience, the greatest of teachers.

The warm weather of June is a fine breeder of lice and mites, and when brooding chicks that have been hatched by hens it is very essential that they be free from lice before being put into the brooder, for if they are not the brooder will make an ideal place for them to breed in. No difficulty will be experienced with lice if they have been put in the brooder free from this vermin; therefore look well for lice on chicks hatched by hens. A very little time spent at this work in the beginning may save you an immense amount of trouble and discouragement later on.

By watching every detail closely and giving the chicks room enough to turn round in there is no reason why 80 per cent cannot be raised.

The Reason Why

My Eggs Hatch Winners.

They are line-bred from winners, scientifically mated and they just can't help themselves.

Barred and White Rocks.

This season at Toledo, Wooster and Fremont I won 4 firsts, 4 seconds, 3 thirds, 2 fourths, 2 fifths and Silver Cup for best display. EGGS from finest exhibition matings reduced to $1 per 15; $1.75 per 30; $2.25 per 45 balance of season.

GEO. HAMILTON, 739 Raymer st., Toledo, Ohio.

# THE FANCIER IN THE POULTRY YARD

THOS. F. RIGG, Iowa Falls, Iowa.

A WISCONSIN correspondent writes:

"I have purchased a tract of land adjoining my place. It is traversed by a small stream. Had been told that this ground is not fit as a range for chicks, as angle worms abound, and hence the chicks will be affected with gapes. What is your opinion?"

It is the generally accepted theory that gapes in growing chicks are caused by earth worms—angle worms. We do not know that this is positively not a fact, but we do know beyond all question of doubt that our chicks never yet have developed a single case of gapes. Now, it stands to reason that our birds are subject to whatever other chicks are, and this being the case we can positively state that chicks can have access to an unlimited number of angle worms daily and never be affected with gapes. Our chicks range on just such a piece of ground as our correspondent refers to. Through this range runs a small stream. Its banks are lined by willows and oaks. The shade is dense, which keeps the ground very moist back from the stream on either side, for a considerable distance. This damp ground is fairly alive with angle worms. Here the chicks dig worms at will and they put in a great deal of time so doing. We here raised our stock on this range for years and, as stated, have never had a case of gapes. Now this is *fact*, not *theory*. The greater part of the range is dry, being covered with a blue grass sod. In view of this fact we can not agree with those who claim that angle worms cause gapes. We can not see why we would not have cases of gapes in our chicks if the theory was a fact. Still our experience does not positively prove that angle worms may not be the cause of gapes—in some cases. We advise our correspondent to turn his chicks onto this range. We know that our land, of a like nature, forms an ideal range for the growing chicks—water, shade and plenty of angle worms. That worm tract is more profitable to us than a dozenbone cutters would be. It supplies our chicks with all the animal food they need and they do the work.

### FOOD SUPPLY AND EGG YIELD.

A few months ago, in this department, we made the statement that the largest egg production is during the period of greatest food consumption; that is invariably true.

This proposition was taken up by a number of writers to the poultry press and assailed most vigorously and I might say, most ably. We were told that the "fat hen" can not in the very nature of things, be an egg producer. We never maintained that she could and advised against any system of feeding that would produce over fat fowls. Our critics did not seem to "catch the idea." May be we did not make our position clear. In discussing this matter a short time ago A. C. Webster thus wrote in the Germantown (Philadelphia) Telegraph:

"From careful test it has been shown that the largest egg production is always during the period of greatest food consumption and the smallest egg yield was when the food consumption was least. This invariably proves the case, so that one can depend upon the truth of it. The amount of food consumed sometimes varies according to its quality. One may make the ration so fattening that the hens will become too fat for egg laying, but with a reasonable diet the egg production will be in direct proportion to the amount of food fed and eaten. This means, of course, that the hens are able to digest and assimilate food, and not waste it. The feed should be given only in such quantities and times as needed, and when the hens will eat it up clean, leaving no waste at all behind. There are several things to consider which will help to stimulate the food consumption so that a direct ratio will be held between the amount eaten and the number of eggs produced. One of these is daily exercise. The hens must receive exercise daily to keep them in good condition. They cannot eat, digest and assimilate a heavy diet unless they receive exercise in proportion to the food. When stuffed with food for fattening, chickens and capons can for a few weeks eat a heavy diet without exercise, but if this was kept up for any great length of time the birds would sicken and die. They could not continue the process without causing trouble in the digestive organs. In feeding for eggs the process must be kept up indefinitely. Experiments have shown also that hens exercised will eat from 2 to 5 per cent more food daily than those not exercised. Those same hens will also lay from 5 to 10 per cent more eggs."

This position taken by Mr. Webster is exactly our position, and we are pleased that so able an exponent and careful breeder has taken a position on our side. Now it all depends upon the *selection of food*. We must feed liberally of oats and wheat, being very careful not to make the corn proportion so great as to cause the fowls to become over fat. In fact we must balance the ration rightly and so feed that the hens will eat a great deal and turn it into eggs. It would be impossible here to state just how much should be given a flock, for conditions are different in all yards. Each breeder must learn this for himself and himself alone. We have discarded a great many food stuffs in the years gone by and it is now our candid opinion that wheat and oats are by far the best egg-producing grains that can be given fowls. We would not do without them.

### GREEN FOOD—SMALL YARDS.

Perhaps a large majority of breeders of standard-bred poultry are compelled to maintain their breeding stock in rather confined pens. The question of how best to keep a growing pasture for the stock is an important one. A few fowls will soon destroy a blue grass sod in a small yard. Our own yards are so large that the breeding pens stock can not kill out the sod, but all breeders are not so situated. A neighbor of ours has adopted a plan that works to perfection. His runs are 12x80 feet. Here he supplies the fowls with green stuff the entire season. He used to sow rape in the fall but now puts in oats and rape. For a time in the spring he runs a temporary fence across each yard a few feet from the house. For half the distance beyond this fence he sows oats. They soon germinate. Then the breeders are turned into the oats. The temporary fence is moved to the end of the oat ground, and beyond he sows rape. Rape is sown later than the oats. When the oats are gone he removes the fence and the fowls seek the rape. It will last until fall and does not "fall down" under pressure of dry, hot weather. It is a good food. Later he sows oats where oats had been previously sown, cultivating them in with a hand plow. The fowls will get some of these oats before they start to grow but not many of them. Soon they are up out of the ground and relieve the rape somewhat. It is a splendid plan.

Main Building on Raycroft Poultry Farm, Owned by George G. Brown, East Cleveland, Ohio.

The Vermont Belgian Hare Company, of Lyndonville, Vt., are advertising a preparation which they call "Rabicure," and which they guarantee to cure snuffles, barrenness, indigestion and slobbers. They have tested it thoroughly and know that it will do all they claim for it. The price of the remedy is 50 cents per box.

## "THE ROOSTER."

Reply to "The Hen, page 429, May AMERICAN POULTRY JOURNAL.

I AM the rooster.
Not a grand mogul, but yet,
I'm an important factor, you bet,
In the poultry yard.
Beats me why
They recognize the hen
And pass me by, when
I'm one of the necessities.
Say—Where would the hen
Be, if her eggs didn't hatch
And, too, what a fix the
Broiler man would be in,
Or even the fanciers who
"Breed in line."
Why—man alive
Don't you know that all
The chicks would be
Caught by hawks,
Crows and skunks if I didn't
Warn the victims?
That the old hens would not
Know when to get out of bed
Or when a change in the
Weather took place
If it was not for my shrill clarion?
Did you forget that
Half the hens in the yards
Where I hang out would
Be insulted
If my heels took flight
At the approach of
The neighbor's cock.
But they don't. No, sir,
I stand my ground like sin,
And in about the third
Round, my friend begins
To see that I'm even
Scientific and then
He does the hot foot.
Yet, the hen says I "push Myself."
It's she who generally "pushes"
Me into a hot argument.
And speakin' about people
"Who would go dead broke
If it wasn't for me,"
Why, I win my share of the
Coin in the pit and
Leave the ladylike occupation
Of layin' eggs to my wife.
My old woman is a warm
Proposition, but then, you
Know, I'm something of
A piperino myself.
When a rat "skutes" about
The yard, the hens cry to me
"Kill him! Kill him!!" See!
And then away they fly
To the topmost boughs of
A hundred foot tree
Holding their dainty
Skirts about their delicate ankles.
Oh, yes, I am laid
In the shade
But if you wish
A nice little argument,
Meet me tomorrow morn
Behind the barn,
At sunrise, before the
Boss gets up and
I'll show you I haven't been
Bred in line since the
Pilgrims landed on the rock,
For fun.
Don't think for a minute
That my wife is the
Only one who has them
Thrown at her in bunches;
Watch my smoke rise to
It's own level.
Perhaps you don't know
That my sons and
Myself often make
Records in the show room which sell the
Hens' eggs, which
Would otherwise be fried,
Poached or boiled.
This kills the profit, you know.
May be I'm a back
Number,
But I can't see it.

*D. Amos Burhans.*

## CHICAGO MARKET.

The poultry market is a little slow. Receipts of all kinds of poultry have been heavy and market lower than it has been for some time. Spring chickens are commencing to come and getting cheap, especially small ones. We advise all your readers to ship their springs as fast as they will weigh 1¼ pounds or more each. Late springs are selling all right, but small ones are very dull and almost unsalable. Ducks and turkeys are also dull. For the last few days we have been selling as follows:

LIVE POULTRY: Chickens: Hens, 8½c to 9c; roosters, 5c to 6c; spring chickens, 1¼ to 2 lbs. each and larger, 22c to 23c; small, 15c to 20c; according to size. Ducks, old 7½ to 8c; spring, 2 to 2½ lbs. each, 15c to 18c; turkeys, 6c to 8c; pigeons, $1.75 per dozen.

DRESSED POULTRY out of season. Everything should be shipped alive until cold weather next fall. Eggs are plenty and dull at 11c per doz. We do not look for much change in the egg market.

We advise all breeders of poultry to ship their goods direct to headquarters and get all there is in it. Local dealers are working for a profit which the breeders might as well have for themselves. Some people have an idea that it takes an expert to ship poultry but it is very easy. For those who are not familiar with the manner of shipping poultry we will be glad to send our booklet giving directions for making coops, preparing and shipping poultry so it will bring the highest market price. We will also be glad to send market report and shipping tags and answer any inquiries.

Now is the time to look out for lice on poultry. Nine-tenths of the poultry diseases are caused by lice and lack of grit. The first food a little chick should have after it is hatched is Mica Crystal Grit. Breeders should use a liberal supply of Sprague's Lice and Insect Killer around the nests while the hens are setting. It will keep them from lice and there will be none to bother the little chicks when they are hatched. We will be glad to send our catalogue and price lists of all kinds of poultry supplies to anyone asking for it. Remember, there will be trouble with cholera or any other disease if poultry is kept free from lice and has proper attention.

We will be glad to hear from any of your readers when we can be of service to them. *Sprague Commission Co, 218 S. Water St., Chicago.*

Do not buy a Brooder or Incubator until you have investigated the "Shaub." Hot water heating and good ventilation. Prices the lowest. Send 4 cts. stamps for new illustrated catalogue.

Published the first of each month by
GEO. G. BATES, Editor and Proprietor.

FRANK HECK, Associate Editor.

Subscription price 50 cents a year in advance.

When delivered by carrier in Chicago 60 cents a year in advance.

Payment for AMERICAN POULTRY JOURNAL, when sent by mail, should be made by money order, registered letter or stamps.

Write name and address plainly, and if JOURNAL does not come regularly and promptly, write us at once.

In requesting change of address be sure to give the old address as well as the new one. This is important.

Advertising rates will be furnished on application.

The reliability of new advertisers must be ascertained before an insertion of an ad in the columns of AMERICAN POULTRY JOURNAL can be made. This is a business matter, the justice of which is readily seen, as protection to the readers who answer advertisements.

Alway say when writing advertisers, that you saw it in the AMERICAN POULTRY JOURNAL.

All copy for advertising and manuscripts for publication should reach us not later than the 20th of the month preceding the date of issue.

## Specialty Clubs.

We note with pleasure the increase in the number of specialty clubs and the revival of interest in the old ones. We wish we could induce every breeder who reads this, to join the club or clubs which are endeavoring to further the interests of his favorites. These organizations when rightly managed can do more to popularize a breed than any other agency and the breeders can through organized effort accomplish results which could never be obtained through individual influence. AMERICAN POULTRY JOURNAL has always given as much publicity to the announcements of the specialty clubs as possible and this support will not be lacking in the future. In this connection we wish to say that this is not an entirely selfish policy. It is not pursued with the object of influencing advertising from club members. The only basis upon which we solicit advertising patronage is that of mutual profit. It is business pure and simple. With a guaranteed circulation of 30,000 copies per month we can and do make advertising pay and there is no better evidence of this fact than the liberal support given the JOURNAL by breeders everywhere. The announcements of the clubs each month are no small item of expense to a publication the size of this one, but as above stated we cheerfully give them this encouragement for "the good of the cause." The first question asked by the breeder when importuned to join one of these clubs is "How will it benefit me?" In order to answer this question we give the following reasons why the American White Plymouth Rock Club thinks breeders of this variety should support the club. They are taken from the last catalogue issued by that organization. We present them for the consideration of other clubs and breeders of other varieties because they embody the principles upon which all associations of this character can and should be formed.

The cost of membership is so small that it is nothing when compared with the advantages to be derived.

It is the only organization whose sole object is the perfecting of the breed and the promotion of your interests.

In no other way than by organized effort can the objects for which we are working be accomplished.

It benefits the beginner and the professional, both alike.

The record of the club shows that it can and does fulfill its promises, and that it can accomplish the objects for which it was organized.

If you are breeding White Rocks solely for pleasure, you should take pride enough in the work to lend your assistance to an organization devoted to the upbuilding of the breed.

If you are an exhibitor, you are benefited by being afforded an opportunity to compete for the coveted prizes offered by the club at shows all over the country.

It gives you a standing and prominence in the fraternity that you can not obtain in any other way.

It is a medium through which the public is made more fully acquainted with the good qualities of the White Plymouth Rock, and this creates a greater demand for your stock and eggs.

It guarantees to the public that you will be fair and honorable in your dealings, under penalty of being publicly expelled from the club, and it urges them to patronize you for this reason.

It places you prominently before the people who wish to buy what you have to sell.

It is a bureau of information where you can get an answer by return mail to any question with which you are confronted in the care and breeding of your birds.

If you are a progressive, liberal minded, up-to-date breeder, and can read the signs of the times, you will not remain long outside the club.

## Origin and Description of the Various Breeds.

We have arranged with Mr. T. F. McGrew to furnish us with the history and an explanation of the Standard requirements of the several breeds of fowls recognized by the American Poultry Association. One or more varieties will be described each month and these articles will be of great practical value to all breeders who are striving to learn more of their favorites and to breed them nearer to perfection. In order to make the department of the greatest value we would be glad to have our readers send us any questions they would like to ask in regard to color or shape of any section or sections of the birds they are breeding and we will have Mr. McGrew anwser these in connection witb his general description of the birds. The different varieties will be taken up in the order in which they come in the Standard. It will be necessary, however, for those desiring special information to write us without delay, for much of the matter will be written quite a while in advance of the time it appears in print.

## To Light Brahma Breeders

In Mr. McGrew's article on Light Brahmas this month we give to the breeders of this variety one of the most complete and valuable descriptions of this breed that has ever been placed before the readers of a poultry journal. The breeder who cannot be profited by a study of Mr. McGrew's remarks is certainly well posted and may be called an expert in producing show specimens of this variety. It will be noted that there is a slight difference of opinion between some of the details as described by Mr. McGrew as embodying the ideas of eastern breeders and the ideas expressed by Mr. Theo. Hewes, who speaks for the western breeders. Mr. Hewes promises us an answer to Mr. McGrew for the July number of A. P. J., in which he will interpret the Standard as the western breeders see it and describe tbe type of bird which is winning in the west. This will also be illustrated and should be read by all Brahma breeders. A discussion of this kind by men like Messrs Hewes and McGrew must of necessity be instructive and interesting as they are both acknowledged authorities whose opinions are respected and whose suggestions are given the fullest consideration.

## Natural Food for Chicks.

The talk about "natural" food for chicks is not always sensible. Whatever the jungle fowl may do or the wild bird in the native field and forest, we should remember that our artificially cultivated flocks are a race unto themselves. As a man in his present state can not be expected to thrive on the diet of the prehistoric cave dweller, so the modern produce of the hen can not be treated as a wild fowl. The effects of environment and feeding are apparent in the present classes of poultry. Experience must teach us what is best for the kind of creatures we have in hand. Science tells us how to adapt natural products to artificial uses. We have no data on which to place an estimate of the losses incurred in the forest under strictly "natural" methods, but we do know that nature is lavish of animal life. Hence our purpose is not only to "improve" on the forms of animal life, *i. e.*, to make the product of our yards fit the tastes of modern society as regards the table and show room rules—but also to avert the loss by natural indifference and produce a greater percentage of perfect birds. We demand that a setting of eggs shall give us nearly an equal number of chicks and also that these chicks shall grow to maturity in compliance with our conception of what a perfect chick is in form and plumage.

Isaac K. Felch writes as follows for the benefit of AMERICAN POULTRY JOURNAL readers:

"Feeding chicks is a matter of common sense. The continued use of wet, sloppy foods, or those that are astringent, will cause a greater death rate than the neglect that comes from letting them care for themselves. Until the chicks are two weeks old, the morning feed should be corn bread, baked hard and crumbled into scalded milk, with no other liquid to drink. The afternoon feed should be cracked corn, millet, canary seed and wheat. In every farm yard or grass plot the chicks wash their little legs in the dew and drink the dew, each drop being a swallow for them. Constant drinking of water, especially if it is not strictly pure, results in diarrhœa. This disease kills many of the young birds. When a lax state of the bowels

is observed, scalded milk should be given. Taking away the drinking water restores them to a normal condition, as a general rule. After the chicks are two weeks old pure drinking water should be placed where they can go to it at pleasure. The food should then be cracked corn, wheat, barley and oats. The morning meal should be a mush of corn meal and bran, scalded the night before and covered. This ought to be thoroughly cooked and still warm when fed. The balance of the day the chicks should be left to roam the field and gather insects and grasses, returning now and then to the feed boxes to take a few kernels of grain. Fully one-half of the food should be of a meat nature, as it will be if the chicks forage for themselves. Confined in yards, deprived of morning dew and insects, the birds lose essential elements. Many persons are not aware of this fact. Some will tell you they raise chicks without water. Before you follow their directions, be sure the conditions are the same. Runs in the dew are baths that insure clean, bright legs and fine plumage. The man who hopes to raise large numbers of chicks on a city lot, with scant shade, by feeding only corn, that has one per cent bone, 11 per cent muscle and 72 per cent fat, while the hearts of the chicks are running 150 beats to the minute, is indeed sanguine."

The live stock premium list of the Pan-American Exposition has been issued and copies may be obtained by addressing F. A. Converse, superintendent Live Stock Division, Buffalo, N. Y. It contains the rules and regulations governing all exhibits of live stock. Entries in the poultry department close Sept. 16. The entry fees are one dollar for single birds and two dollars for pens. Specimens entered in the open class cannot compete in the pen class and vice versa. Prizes will be paid as follows: First, $4; second, $2; third, $1. In classes where there are not more than three entries, first prize money will be withheld but first prize honor awarded and second prize money paid. Exhibitors whose entry fees amount to $20 or more will be given tickets of admission to the exposition during the period of the poultry show. Several specialty clubs and individuals have contributed liberally to the list of special premiums.

Our friend, the editor of *Farm Poultry*, takes occasion to censure us for an alleged inconsistency in our reference in the April number to the custom of abbreviating the names of the three varieties of Plymouth Rocks. We have no explanation or apology to make for we do not believe that a cause for one exists. He assures us that our remarks are understood and he thoroughly agrees with us in our opinions. We are quite sure, therefore, that the rest of our readers will understand our meaning and our only object in referring to the matter again is to call attention to the fact that Mr. Robinson appreciates a good suggestion when made by a contemporary.

We often wonder why some people subscribe for a poultry journal. For example, we have received numerous letters during the past month from subscribers, asking for information and instruction relative to the care of young chicks and more particularly a cure for bowel trouble and leg weakness. Both these subjects were given space in the last issue in several places and if the advice had been heeded, many readers could no doubt have saved whole broods of chicks that have since died. The point is that they will not read these articles and will take the trouble and lose the time of writing a letter which cannot be answered fully because of the time and space required nor intelligently because we are not familiar with the conditions under which the chicks are being handled. We have again devoted liberal space in this issue to "bowel trouble in chicks" and methods of feeding, etc. Many valuable hints will also be found in the "Little of Everything" department in the May and June numbers.

## June Work in the Poultry Yard.

June is the growing month for all nature and especially is this so with reference to the chick. Its temperature seems to suit the young may-bes (not particularly honey bees) and sends them along rapidly to maturity. By this time they should be "on their feet" and prepared to rough it to some extent. Hot-house methods will no more do for show birds than it will for—just chickens.

Beef, bone and muscle first; feathers next. This, at least, is what the practical poultryman is after. There is only one way to get muscle, and that is to give free range and feed for growth, rather than flesh—the beef can follow as the show season aproaches or the chick is ready for the block.

Little detached shelters are recommended for the chick colonies. These houses can be 4x8 feet on the ground, three feet high in front and two feet high at back or any size desired. Build them out of light lumber and cover with building paper. The front should hinge at the top so that during hot weather it can be propped open, thus giving additional shade.

Warm weather is here to stay by June, but there will be cool nights in the northern latitudes. The chicks should now be separated as their sex is revealed. Small colonies are best; but we are still assuming that only a moderate sized flock is being cared for—the large breeder is another person entirely.

All poultrymen or fanciers are supposed to have at least a back yard, and, if we can confine ourselves to our circumstances, and only raise a dozen or fifty chicks (according to the size of the aforesaid back yard), then we can give the chicks a fair range and judicious feeding, and care can go a great ways towards overcoming the lack of range.

A great many people nearly ruin their chicks by overfeeding. The object with the broiler is to get him up to two pounds just as soon as possible. The object with stock chicks is to get the largest and strongest frame possible (according to the breed).

Let us state to the practical poultryman that the sole object should not be to get the first egg when the Leghorn reaches four months of age or the Plymouth Rock six months of age; but, rather, let the object be to get the first egg when the bird has fully developed into a good sized, strong, active pullet. True they should be hatched early enough so that they will have time to grow, develop and commence to lay before cold weather sets in or by November 15. If the pullet does not commence to lay before cold weather sets in we will, very likely, have the pleasure of feeding her all winter at a dead loss.

By June the grass makes excellent pasture and bugs and worms are supposed to be fairly plentiful; therefore the chick should be able to gather half of its food on the range. Wheat is one of the best of the cereals to use in this case. This can be varied some, but give little or no corn. In fact many breeders discard corn altogether when their chicks are thus on the range.

Very early in the morning give a feed of wheat or, if you have the time to mix and scald it, give soft feed in the morning. A greater variety can thus be given and possibly more rapid digestion follow,

**How Best To Set A Hen.**

**Hens Will Set**

And do their level best when given the right kind of a nest, the right number of eggs, the right kind of food, the right kind of care and dusted with the right kind of insect powder. For this latter purpose Lambert's Death to Lice fills all of the requirements.

**Eggs Will Hatch**

When the breeders are kept free from lice, and when they have daily out door or scratching shed exercise. Under these conditions eggs from healthy birds are usually well fertilized. When good eggs fail to hatch the trouble is often outside the eggs. Lambert's Death to Lice Powder never injures the fertility of eggs for hatching, the sitter, or the little chickens should they hatch in a handful of it.

**Chicks Will Grow**

When started free from vermin and kept so from the shell up. If allowed to become lousy they lose strength and vitality, which will stunt them in growth or cause an early demise. More chickens die every year from this cause than any other, while a little Death to Lice Ointment would save their lives.

**Death to Lice Remedies**

Death to Lice Powder for dusting layers and sitters—5 oz. sample, 10c postpaid; 48 oz., 50c; 100 oz., $1.00, from here or nearest agency to you by express. Death to Lice Ointment for head lice on children or chickens, also scaley shanks on fowls, 10c and 25c postpaid. Death to Lice Special, for making a liquid louse or mite killer and for mixing with the regular powder for fleas on dogs, moths, etc., 4 oz., 10c; 16 oz., 40c, by mail postpaid. Death to Lice Lice Liquid for spraying poultry houses, painting roosts, etc., (already prepared) 1 qt., 35c; 2 qts., 60c; 4 qts., $1.00, f. o. b. here. Book and "How Best to Set a Hen" sent free.

**D. J. LAMBERT, Box 308, Apponaug, R. I.**

**Pekin Ducks, White Wyandottes and White Plymouth Rocks,**

Winners at New York, Philadelphia, Boston, Hagerstown and smaller shows. Hens eggs, $2 for 13; $5 for 39; $12 for 100. Incubator eggs, $8 for 100. Duck eggs, $2 for 12; $5 for 50; $8 for 100. A few eggs from prize winning pens of ducks and hens, $5 for 13; $8 for 36. Send for circular.

***POLLARD'S POULTRY FARM, So. Attleboro, Mass.***

***F. M. POLLARD.*** ***GEO. H. POLLARD.***

thus giving the chick more immediate strength to battle with the elements (or a big fat tumble bug); at any rate, feed only half a meal. It is not kindness to give a full feed in the morning, but the reverse. The chick's movements are made sluggish and when the heat of the day begins then the full fed chick begins to feel the gnawings of hunger while the other will have a comfortable crop full and be ready to take it easy. Feed nothing at noon but let the night feed be all they care to eat up quickly without making faces. We will soon see that very little grain will be eaten at night. Do not feed more than will be eaten—feed is too expensive for that.

The heat of summer changes conditions as to feed and care. In the first place the chicks must have access to shady places. If you have not been thoughtful enough and prudent enough to have supplied shade by the planting of trees and shrubs, devise some temporary quarters wherein the chicks may find shade during the long, hot days now upon us.

If you have been feeding the chicks wet, sloppy, raw feed, you have been making a mistake, and if you continue to so feed during the warm weather you will certainly loose a great many chicks, and those you do succeed in raising will not be right. Discard the sloppy, raw feed right now. That this kind of feed is the cause of the death, during the summer months, of more chicks than is anything else except lice. The food is allowed to sour and at once the chicks become affected with bowel complaint. Nothing will so reduce the vitality of a chick as bowel trouble, and with the attendant effects it soon greatly reduces the number of chicks. The fact is that one feed a day of soft stuff is sufficient. Not only is it sufficient, but more is absolutely injurious. Let this be fed in the morning. If the feed consists of any part of uncooked corn meal let it be moistened with scalding water. It will then swell before it is consumed instead of after if fed raw. As to the other feeds nothing is so good as millet seed. It is rich in oil and other desired properties and is greatly relished by the chicks. Do not feed it exclusively for a mixed and varied feed is essential to growth.

One well known breeder gives the following plan of feeding young fowls in June and the hotter months:

Morning Feed.—Mixture of corn meal, ground oats, barley and rye, moistened with scalding water with a little milk added.

Noon.—Millet seed one day; wheat the next.

Night.—Cracked corn one day; a mixture of wheat and millet the next.

Twice a week a feed of whole barley, soaked in boiling water for about twelve hours may be given.

An occasional feed of raw cut bone is also given, not more often than twice a week. Let this take the place of the noon feed.

Upon this bill of fare the chicks will grow and thrive wonderfully. Some trouble, you say. Yes. But we have learned that in this world it pays when we are doing a thing to *do it*. It is the man who makes the most out of his opportunities who succeeds.

In the application of the advice herein given relative to feed, one important fact should not be lost sight of, and that is, that the yarded chicks in town and the chicks which have the free range of the farm do not respond alike to any given feed. The farmer will tell you that it is all nonsense to talk about raw corn meal being injurious to chicks. He feeds it year after year and raises his chicks. The town man feeds it and his chicks die. Now, it ought not to be a difficult task to understand the situation. The farmer's chicks thrive on raw corn meal because having free access to the fields they secure bugs and worms—animal food—and thus are supplied with a balanced ration. The town breeder's chicks do not secure the required animal food, and thus their ration is not properly balanced. It's a law of nature. That's all. To meet the requirements the yarded chicks must be fed green cut bone or blood meal.

Feed will be of little avail if lice are allowed to take possession of the brood coops, mother hen and chicks. Keep all free from lice. Do this by using insect powder on hens during incubation, and again dusting them thoroughly when taking off the brood. Also liquid lice killer is applied to the bottom of each nest before setting the hen. The brood and hen come off free from lice. During the season the bottom of each brood coop is painted, but slightly, with liquid lice killer. In this way we have no lice or mites to bother the growing stock.

**ADAMS' MAMMOTH Imperial Pekin DUCKS**

Every fowl from farm-raised stock, vigorous and healthy. You wont find better ducks on top of the ground. We guarantee satisfaction. Young ducks (old enough to do without a brooder), 40c each in dozen lots or more. Half grown ducks 60c each in dozen lots or more. Duck eggs $4.50 per 100; $8 per 200. All shipments promptly made by Adams or American Express.

## Material for a Poultry House.

A reader of the JOURNAL in Indiana asks if a poultry house constructed of single brick walls is as good as one made of frame and lumber. No. it is not. The bricks will prove to be damper and colder than sides of frame, boards and building paper. The size of this man's flock is not stated, but assuming that he wishes to accommodate about sixty birds, a wooden building eight feet high on the south exposure, with slanting roof toward the rear, 12x20, would be about right, a simple frame, with inch sheeting, covered with tarred paper, makes a warm shelter. Some experienced men advocate paper on the outside, fastened with lath on the edges; others prefer a double sheeting with paper between; while some put the paper inside, on the studding. There is no fixed rule about construction. The points to be looked out for are: Warmth, avoidance of loose cracks, solidity of surface (to prevent lice finding a hiding place) and ease of access with the whitewash brush. There should be scratching room, away from the roosts, and an exterior shed, roofed but open on one side, preferably the south, as a winter resort. The dust box and feeding trough; the nests, roosting poles (with movable board beneath for droppings) and the general appliances, have become familiar objects to any one who knows the least about fowls. Outside runs are a necessity. Cleanliness and economy of labor must be considered.

# The BELGIAN HARE.

## THE BELGIAN AT HOME.

*From Chasse et Peche. Translated by Dr. H. P. Clarke, in Poultry of Feb. 12, 1885.*

(CONTINUED FROM LAST MONTH.)

MR. SALTER, discussing the Belgian hare from the point of view of a scientific naturalist (there are, then, two kinds of naturalists—the scientific and the practical?), says: "The breeding of the races of domestic animals has great influence upon the instruction of the men of science. These efforts would be highly approved by my friend, Mr. Darwin. As regards rabbits, one of the most curious results among those obtained was the production by artificial selection of a race which by its exterior aspect and its color (which? the brown or the reddish?) approaches the common hare of this country, the *lepus timidus*." At any rate, this ought not to be *lepus variabilis*; for, according to a scale of points drawn up in 1882 by Messrs. Jamings, Lumb, and thirty more of the best breeders and judges of the day, the color brown reddish counted for 20 points, the hare-like structure 20 points, and the ticking extending uniformly all over the body and of a black chocolate color, 15 points.

In 1888 commenced the controversy on the subject of color; some wished it a richly shaded or red soot; others preferred a rich fauve, a dark red or a fox-red, etc.

In 1889 Mr. Lumb drew up a new standard and the Rabbit Derby instituted a prize consisting of a cup valued at 10 guineas (a little over $50). The points are enumerated in the order of the more or less difficult to attain: 1. The eye full, wildly mobile and active of the hare in all its beauty. 2. A reproduction more exact of the fur of the hare. 3. A more faithful copy of the narrow border of the ear, as seen in the wild hare. 4. The length of the foot. 5. Style and carriage, at repose and in action, to realize more resemblance to the wild hare. 6. The ticking.

Mr. Salter wrote: "As long as the fur of the Belgians does not in any respect resemble the form and the marks upon the hide of the wild hare, it will always exist, as a barrier raised against complete imitation, and consequently against all progress."

"This similitude can be obtained," continues Mr. Wilkins, "only by the bringing together of elements essentially different. In the two species there is not from the earliest age any resemblance whatever. The leveret is born covered with a fur almost identical to that of the adult. The little rabbit is born entirely naked, then it begins to assume a very close and compact coat of drab, which after two or three months is splashed or studded with a profusion of black hairs, more elongated and giving to it the aspect which is commonly designated by the word 'ticking.' This ticking or mixture of black and of fauve becomes of two different arrangements of color in the hairs of the coat. In the hare the end of the fur is fauve upon a black base; in the rabbit there is a black ticking upon a fauve body-color."

Mr. Salter advises judges and body-color breeders to attach more importance to: 1. good length of fur. 2. a greater variety of color and of markings, with a clear tint and local ticking. 3. The ticking must be developed in fauve upon the end of the long black hairs.

"Procure for yourself," says he, "an adult hare a year old, just at full maturity, with the coat completely developed. Have it stuffed. Place it in your warren and let it be your silent guide."

"Mr. Creaves and myself,"—says Mr. Lumb, the King of the Belgians, the honorable secretary of the Belgian Hare Club,—"we are the two first to make known the Belgian Hare in England. In fact we were the first to obtain classes by guaranteeing money prizes and by offering specials. At this period there were very few of these rabbits and they had to compete in the Any Other Variety classes. I think the first Belgian classes were established in 1873 or 1874. The photograph of his 'Empress' appeared in a specialist journal of Belgium in 1875. May the Belgian Club and the fancy in general for a long time preserve this intelligent, loyal and active secretary."

We have said above, concerning the portrait of "Empress," that this statement is an error, *Chasse et Peche* not having issued its first number till November 5, 1882. Mr. Lumb is always to the fore, and it was he who last spring signaled to us the attacks of fever canaculine which even now burns the brain of the Americans.

## BELGIAN HARE PELTS AND FURS.

For a long time after beginning the breeding of Belgian hares we were doubtful of the utility of the hides, but we finally began experimenting in tanning, having had experience at tanning other furs. We finally succeeded in producing a very fine leather and tanned furs, and now when a customer asks are their hides good for anything we exhibit to him some of the product of our tannery. At present writing we are having a pair of light shoes made out of the leather

**Prize-Winning Belgians.**

That I have a **prize-winning** strain of hares is proven by my show record at Hillsdale (Mich.) County Fair, where I won **first** on both buck and doe. Am breeding best known strains such as Lord Britian, Banbury, Yukon and others. Stock reasonable. Correspondence solicited.

***EVERGREEN RABBITRY,***

# BELGIAN HARES. Dirt Cheap.

Rare opportunity. Good stock at prices that will surprise you. $3, $5 and up for fancy stock. Business keeps me out of the city. Am open for a reasonable bid on a big lot.

**W. T. GALLAWAY, 496 LaSalle ave., Chicago, Ill.**

and expect to wear them to show the skeptics that their hides are good for something. We are still experimenting along other lines and will have better results to report later.

*Lansing, Mich.* *Wm. L. Brush.*

S. D. Porter, proprietor of the Twin City Rabbitry, at Lasalle, Ill., is offering young Belgian hares three months old, sired by Lord Lipton, Jr., and Golden Sovereign Boy, at $2 each. These are genuine bargains and it will pay you to write him, as they will not last long at this price.

## BOSTON MARKET REPORT.

### EGGS.

| RECEIPTS. | BBLS. | CASES. |
|---|---|---|
| For 6 days | | 34,030 |
| Same week last year. | | 44,694 |
| Previous 6 days | | 42,284 |
| Since April 1 | | 209,674 |
| Same time last year | | 203,956 |

Receipts continue liberal and demand only moderate. A large proportion of the arrivals show heat defects and prices are taking a wider range as shrinkage increases. It takes strictly fancy stock free from heat to bring full quotations, and average marks of western have been selling of late at 13@13½c. Some inferior marks have to clean up at 12@12½c. Eastern have been selling generally at 13@14c.

QUOTATIONS AT MARK.

| | |
|---|---|
| Nearby and Cape, fancy | 15 @16 |
| Eastern, choice, fresh | 14 @ |
| Eastern, fair to good | 12½@13 |

LIVE POULTRY.

Western fowls have been in good supply and moderate demand at 10c. Some small lots of spring chickens selling at about 25c per lb.

| | |
|---|---|
| Fowls, per lb. | 10@ |
| Roosters, per lb. | 6@ |

ADAMS, CHAPMAN & Co.,
No. 37 North Market st.,
Boston, Mass.

## CRANGLE'S VIEWS ON SIZE WHITE PLYMOUTH ROCKS.

I have read with much interest the several articles in the AMERICAN POULTRY JOURNAL in regard to shape and size of White Plymouth Rocks. I know for a fact that during the past show season awards were made at some shows for size only. They could not have been made on any other point, and I believe that when we get much over Standard weight we will as a rule lose on shape.

I am not trying to breed small Plymouth Rocks, but am trying to keep as near the Standard weight as possible. It might be well as some breeders say to disqualify for two pounds over weight if it were possible to do so, but I do not believe that the majority of White Plymouth Rock breeders would wish this clause put in the Standard.

I think that when birds are up to Standard weight, the small bird should have same chance as a bird two or three pounds over Standard weight when all other sections are equal.

In judging a bird I look for shape, as I think shape is the first thing to be considered.

The White Plymouth Rocks have come to the front very fast during the past three or four years, and it is hard on a breeder to lose a prize when it is justly due him.

I think that all the larger shows would select judges in the White Plymouth Rock class who would be satisfactory to members of the White Plymouth Rock Club if the club would make a request of this kind in time.

*J. F. Crangle.*

*Simsbury, Conn.*

SAN ANTONIO, TEX., Jan. 21, 1901.

*Mr. George M. Leffel, Springfield, Ohio.*

Dear Sir: Received your P. C. and also the cockerel, same turned O. K. You certainly gave me a fine bird. Thanking you many times for your good selection, I beg to remain, Yours truly,

*H. R. Schmeltzer.*

# RABBITS

The only low-cost book on the Rabbit ever published to our knowledge, is "The Rabbit: How to Select, Breed and Manage the Rabbit and Belgian Hare, for Pleasure or Profit," by W. N. Richardson, a man of long experience with Rabbits. Third edition now ready, nicely illustrated, enlarged and much improved with breeders' directory. Price 25 cts. or with AMERICAN POULTRY ADVOCATE one year 40 cts.

Our great buck, Lord Edinboro, Jr., at stud, $10. Write us, stating your wants plainly. We will reply by return mail with full particulars.

***CENTRAL BELGIAN HARE ASSOCIATION, WESTVILLE, IND.***

## The Entire Black Minorca

It is so easy to follow up a fad either in breeding or judging that there is great danger of losing sight of many Standard requirements in too great enthusiasm over some few. By neglecting to study the letter of the Standard on all points, one is quite likely to form ideals of his own, on special points, not in accordance with Standard requirements, till he comes to believe them the only real and desirable types, much as a boy leaves things of real value to be gathered by others while he chases the gay-winged butterfly which has attracted his fancy, but can be of no value to him when caught. He who is to make a success permanently, gives attention to all points carefully and learns to estimate each point of every section at its real and relative value according to the expressed rules of the Standard.

I have seen Black Minorcas in the showroom, the exhibitors of which thought them sure winners because the birds possessed fine combs, and others expected their birds to win because their tails were carried to almost sweep the ground, so to speak, when the Standard was requiring a sixty-degree angle "with a horizontal line at the base" for a correct Black Minorca tail. It will be easy to see that if these birds conformed no nearer to Standard requirements in other points than in tail they were hardly worthy to be allowed to compete; in fact, they would be so far from the Standard type that they could not be recognized as Minorcas.

A person who can only breed one point to or near to Standard requirements is by no means entitled to be called a scientific breeder. It is he who can breed birds good in all points, and have a large percentage of his whole flock thus, who can lay claim to such distinction. I have in mind a bird with nearly perfect comb, which I saw in a showroom, but his legs were set so near together as to touch at the hocks, his body ill-shaped in general and his color of plumage very dull and full of bronze barring. A breeder of sufficient discernment to be successful in any real or practical sense would have seen at a glance that the bird was wholly unfit for show or utility, but the owner thought it strange that this bird was not judged to be the best on exhibition, and made himself ridiculous in the eyes of true fanciers by finding fault with the judge who had rendered a just decision. It would be as sensible to award a prize as "gentleman's roadster" to a wind-broken horse, having ring-bone and spavins, because of a fine head and ears, as to award such a Minorca any prize, no matter how fine his comb.

PIT GAME BROOD COCK "PATO."
Owned by A. R. Whitney, Akron, Iowa.

I believe that at present there is no danger of comb of Minorcas being neglected, and more breeders are paying attention to size than formerly. I can easily recall the time when I was severely censured because I asked through the journals for a high standard of weight, and when the Standard was placed at eight pounds for cocks many grumbled because they thought it an impossible weight for a Minorca; but now we hear no complaint on that point. Color of plumage, too, is receiving more attention, but there is still room for improvement on this line. Shape and color of legs, shape of body and shape and color of lobes are being too much neglected by most breeders and by some judges. If the legs are not strong, straight and well apart the bird is not on a good foundation. He looks awkward and is physically weak. A correctly-shaped body adds greatly to the beauty and gracefulness as well as to the usefulness and health of the bird. There is no fancy point which is more striking than the earlobe, and that is a point which is being sadly neglected by breeders as a rule, and, I am sorry to say, overlooked by some judges. The Standard requires lobes to be "almond-shaped, smooth, thin, free from folds or wrinkles, fitting close to head," and "white." In the largest exhibit of Minorcas which I saw in a show last winter, at least four-fifths of the birds were quite faulty in lobes, and some of them extremely so, the lobes being not only wrinkled, but actual deformities because of knots and bunches in some specimens; in others, lobes were too small and ill-shaped, and some very poor in color. The owners of these same birds pretended to feel very

ill-used hecause other and superior hirds won over them.

A fine, large lobe, conforming to Standard requirements, is beautiful and a feature which adds as much to the heauty of a Black Minorca as any one feature can, and such an attraction should not be overlooked. A few years ago there seemed to he a prejudice against the large lohe, because it was thought that with large lobes the white was more likely to extend into the face, hut that was when lobes were bred without regard to shape—some round and some almond-shaped. The round lohe extended nearer the face, and may have had that tendency in some strains; but I have never met that difficulty, perhaps hecause I have bred to the almond-shaped. The round "Hamburg-shaped" lobe is not desirahle for Black Minorcas.

Now, as memhers of a cluh for the improvement of Black Minorcas, let us strive to know the Standard hetter, and breed nearer to all of its requirements; and let us speak and write more of the correct interpretation and application of the Standard than of prejudices and hobhies. Thus will the influence which we may have with hreeders, and even with judges, be in the line of correctness rather than the reverse.

In closing I wish to thank the cluh members for the honor conferred upon me at our last annual meeting, when they voted to recommend me as one of the judges of Minorcas at the Pan-American Exposition. It has been my practice to refuse to sell birds to be entered in a class which I knew I was to judge, and if I judge at the Pan-American I shall follow that course, and all hirds will win or lose on their merits, as they conform to or deviate from Standard requirements, regardless of ownership.—*George H. Northrup, in American Black Minorca Club Catalogue.*

---

## TURKEY CULTURE.

"Turkey Culture" is the title of a new book published by the Excelsior Wire and Poultry Supply Co., 28 Vesey St., New York City. It was written by America's foremost experts and is replete with valuable information relative to hreeding and mating the several hreeds of turkeys. The price is fifty cents and we unhesitatingly recommend it to our readers as worth many times this amount to any one interested in turkeys. It covers the suhject in a thorough and exhaustive manner and the instruction given and methods suggested may be absolutely depended upon as up-to-date.

———o———

Mr. W. J. Farrar, of Toledo, O., the well known White Rock breeder, finds it necessary, on account of his other business, to devote less time to his birds and he is therefore compelled to reduce his flock to the minimum. He is offering his prize winning specimens at prices much lower than their real value and he will also dispose of a large number of his best hreeding birds which have proven their values as producers of exhihition specimens. This is a legitimate sale at hargain prices and we can conscientiously refer our readers to Mr. Farrar for high grade stock of this variety.

———o———

Ben S. Myers, Crawfordsville, Ind., informs us that he is having a splendid egg trade and that the AMERICAN POULTRY JOURNAL is bringing its share of the business.

Reliable Breeders' Directory
OF THOROUGHBRED POULTRY.
We believe all breeders whose names appear below to be thoroughly reliable and honorable, and their stock to be of superior quality. Address will be inserted in the JOURNAL for such breeders as can satisfy us upon the above points, and that their stock is thoroughbred, for $2.00 per year, payable strictly in advance. Those who breed more than one variety, can have address under other headings (after the first) for $1 for each variety.

## EXHIBITION BIRDS AS LAYERS.

How often we hear remarks like this, "I don't want high scoring fowls bred for fancy points. I want hens that will lay eggs." I wish to cite some instances to show that high scoring fowls are oftentimes the best of layers. In 1887 I had a pen of eight Buff Leghorn pullets. They had scored in show room competitions from 90½ to 96 points, one being winner of silver cup for highest scoring bird in the show. I undertook to keep a record for a year of eggs laid, but at the end of seven months I had a six weeks' siege of typhoid fever and the record was not kept. They were yarded in a place 16 by 20 feet, not a spear of grass in it, but of course I furnished them egg making food and they did the rest. From the 1st of January to 1st of August they laid 1,104 eggs, an average of 138 each. Last year I had a Buff Wyan pullet scored in December, 1894, and won 2d. In July she became broody and as she had been a very persistent layer and the breeding season over, I set her on her own eggs. She hatched 12 chicks about Aug. 1, and when the chicks were old enough to wean she commenced to lay, we will say Nov. 1st, I thing sooner, and she has never stopped from that day to this. I exhibited her again in December and she laid while at the show—six days. Out of about twenty she was the only one that was laying while at the show that did not stop after returning home, but she layed the next day and right along. If we assume that she laid every other day since Nov. 1st until now it would make 97 eggs right through the hardest half of the year, and I know she has done better than that. I find the Buff Wyo to be fully the equal in laying of any of the American varieties. *D. D. Haines.*

*Geneva, Ohio.*

## KEROSENE A VERMIN DESTROYER.

Whenever kerosene is used on a fowl it should be mixed thoroughly with lard or sweet oil. Kerosene is too harsh for direct application on head, legs, or skin. The oil can be used in the cracks of the sheds or on roost, but even then an emulsion is safer, as the oil renders woodwork more inflammable. There is no more certain destroyer of vermin in their free state than an application composed largely of kerosene. P. H. Jacobs gave a receipt for making an emulsion of this sort that has never been improved upon. It is reprinted for the benefit of the newer readers:

"Take one pound of hard soap, shave it, and dissolve in three pints of boiling water. While boiling hot remove it from the fire to avoid danger, add three pints of kerosene (coal oil) and churn the mixture briskly. Churn, or agitate, for fifteen minutes, until a thick cream results. Be sure that the kerosene and soapy substance is well mixed by churning. Kerosene will not mix with water, but forms an emulsion with milk or strong soapsuds. If preferred, a gill of crude carbolic acid may be added to the kerosene, as the crude acid also forms an emulsion with the soap. Now add twelve quarts of cold or hot water, or soapsuds, to the cream, stirring well. You now have a cheap lice destroyer, which may be sprayed over every part of the poultry house. For dipping hens add twenty quarts of water, but care must be taken that the soap and kerosene are well mixed by churning, as

## STAR Incubators

hatch more and stronger chicks than any other, because they require no artificial moisture and have superior system of ventilating and heating. Send for catalogue.

THOS. F. RIGG, IOWA FALLS,, IOWA.

We present herewith the half-tone likeness of one of the most popular western judges, Mr. T. F. Rigg. His years of experience as a breeder and his reputation for fair minded and intelligent decisions have created a demand for his services all over the country. He officiated at both the last two shows of the Boston and Chicago Associations and has done satisfactory work at Philadelphia and Cleveland. His engagements at smaller shows are well known and are too numerous to mention. He is one of those fanciers who are in the business for pleasure and not for profit alone and we take pleasure in introducing Mr. Rigg to the thousands of new poultrymen who have joined the ranks this season.

A. V. Dykes of Dana, Ill., writes us that he is closing out all his S. C. Brown Leghorns and will make prices on them that will sell them. Brown Leghorn breeders who wish to add some good birds to their flock at small expense should write to Mr. Dykes and get description and prices of what he has to offer.

**"Profitable Poultry Keeping in All its Branches."**

This is the title of the new and elegant Catalogue issued by the Cyphers Incubator Co., for 1901. It contains 224 pages, 8x11 inches in size, over 200 fine new half-tone illustrations and a wealth of interesting, down-to-date matter, covering the subject of **Poultry for Profit** in all its branches.

**This is a Brand New Book,** not a re-hash of old ones. Contains special articles written by experts, and illustrates and describes over fifty of America's largest and most successful Duck, Broiler, Roaster and Egg Farms. It also contains the endorsements of over one hundred of the foremost breeders of this country—men and women who are using the **Cyphers Incubators**—and shows photographic views of many of their poultry plants and favorite poultry houses. Ask for Book No. 5 enclosing 10c in stamps, and address nearest office.

# BLANCHARD'S WHITE LEGHORNS.

## The Leading Strain of Heavy Layers

Are no experiment, having been carefully selected and bred for over 20 years with results that fully justify the claim that they are **THE GREATEST LAYING STRAIN OF SINGLE-COMB WHITE LEGHORNS IN EXISTENCE.** No labor or expense has been spared in building up this strain, and while the production of large, pure white, fancy market eggs has been the main object, **STANDARD QUALITIES** have not been neglected. They are large, vigorous, active and handsome, unexcelled for introducing new blood or as foundation stock. 1,000 birds for sale. Cockerels for sale. **Eggs for hatching from fine stock** in large or small lots.

**H. J. BLANCHARD, Box 997, Groton, N. Y.**

BRONAUGH, MO., Jan. 22, 1901.

*Mr. George M. Leffel, Springfield, Ohio.*

Dear Sir: I again trouble you for various reasons. Chiefly because I have great faith in you and your Barred Plymouth Rocks and because you have so kindly assisted me each time I have told you of my difficulties. I began my B. P. R. work in February, 1898, when I bought those five hens and cockerel from you. He was from same yard as your first prize Cleveland cockerel and son of your first cock at Cleveland and brother to first cockerel at Chicago. The mating gave fine pullets, but the cockerels, although beauties, had white under color, so the next Spring, last of February, 1899, I sent to you and you sent me a grand breeder, a son of your Cleveland, 1898, winning pullet, which as hen was winner at Springfield. I raised quite a lot of good birds from him and had J. W. Wale here to score and mate them for the past year. I showed the last described bird and seven others at Southwest Missouri show a year ago, and sent you my ad, telling my winnings. I did not get to go to the Southwest Missouri show at Nevada this year, but I sold the bird that got first on cockerel last year for me and he took first as cock. Just received a letter from a breeder I met last year who admired my "Leffels" very much. She has a good sum to put into a pen of Rocks and wants to know if I did not find you fair, reasonable and honest. I shall heartily say, *Yes, indeed, I did.*

*Mrs. C. W. Morrison.*

---

Dear Sir: The eggs arrived in apparently the very best condition in due time and were put to set at once, part in an incubator and the balance under a very good setting hen, so I think I had ought to get a fair hatch from them, as they shall have the best of care. Please send me your circuclar, showing your matings, your winnings and do you pursue the single, or standard, mat-

ing or the double mating. Think I may take a trio or a pen of you, but cannot say positively until about April 1. Very respectfully, *J. C. Murray.*

ELGIN, ILL., Feb. 20, 1901.

*Mr. George M. Leffel, Springfield, Ohio.*

Dear Sir: The Plymouth Rock cockerel arrived last Friday at 6 p. m., in good conditlon and suits me to the dot. He is a very fine bird and a better show bird than I have seen at any of our shows. I put him in with my first prize pen, scoring 94 points, and my pullet, scoring 92 to 93.

Thanking you for making me the good selection, for he is just what I want, I shall remember you. Yours truly,

*Phil Schlemmer.*

ELGIN, ILL., Feb. 25, 1901.

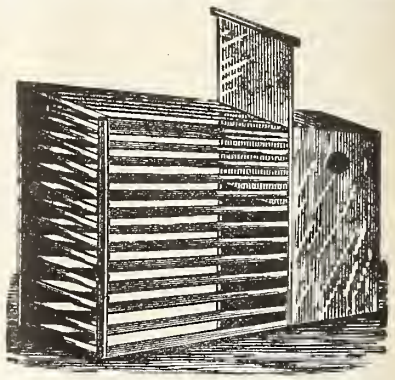
*Mr. George M. Leffel, Springfield, Ohio.*

Dear Sir: Please send catalogue and price list of eggs. I want to get some new blood this spring. I won almost everything in the Barred Rock class with B. N. Pierce as judge. Have cockerels scoring 94 and 93½, cut one on weight. Pullets scoring 94, breeding pen, 188½ first; second, scoring 185½. The last bird I bought of you scored 92 as a two-year-old cock. This stock is all of your stock. I bought the first trio of you the World's Fair year and have line bred ever since. Let me hear from you soon. Yours,

*Frank Wolgamuth.*

## A NEST BOX FOR SETTING HENS.

Herewith is given an illustration of a nest box found to be wonderfully satisfactory. It is made of common pine lumber, two feet square and two and one-half feet high. It has a slide door in front. In this door is cut a hole six inches square, and over this is tacked wire cloth. This gives light and air to the hen. These boxes are placed in a convenient room, which has been supplied with a large dust box and grit. Do not place these setting boxes in the house containing your breeding stock, or, for that matter, in a place containing any of your poultry. When we have our hen ready to set we paint the inside bottom and sides of the box with liquid lice-killer. A very little straw is then put in and the hen immediately put in the box, giving her a few china eggs. We leave her there until the next morning or evening, for by this time she is entirely free of lice. The



nest is then made and she is given her eggs. These boxes are placed along the sides and ends of the hatching room. Every morning the sliding door of each box is raised and the hens allowed to come off for feed and water. They are given only whole grain, mostly corn, during incubation. Each hen readily learns to go to her proper box. When through feeding and having returned to the nests, the doors are closed and the work of caring for the setters is over for the day. By the use of these boxes the work of caring for setting hens is greatly reduced. Then, too, we have each setter well in hand. They are safe from rats or other vermin. The illustration shows a lath run to the box. This is used with the May chicks. The run allows the hen fresh earth and a place to dust.

**Legalized Expert Poultry Judge.**

TO POULTRY ASSOCIATIONS:

I am open for engagements to book dates for judging your show. Poultry, all varieties; also pigeons and pet stock. Judging done by comparison or decimal score card; also private scoring and expert mating. Send for a circular of testimonials from U S and Canada shows. Write me at once for lowest terms and name dates wanted. Address

LLOYD M. HALLENBECK, Catskill Station, N. Y.

***How to Build Poultry Houses***

**THE NEWEST, BEST AND MOST COMPLETE BOOK OF INSTRUCTIONS ON HOW TO BUILD POULTRY HOUSES, FIXTURES, INCUBATOR HOUSES, Etc.**

Half the success with poultry is in proper housing. Any old thing with a roof will not bring best results. Many people fail for this reason and wonder why it is. This book does away with all experimenting. You don't have to guess at anything. You get the results of years of experience and thousands of dollars spent in trying different plans of houses. There is no worrying, no scheming, no doubt, about the proper amount of space and interior arrangement. Everything is illustrated and thoroughly explained. The value of this book cannot be appreciated without a perusal of it. **It is of great value to the small breeder with a few fowls, and to the large breeder with his hundreds.** No time or expense has been spared to make it complete. Price 50 cents, postage paid.

This book will be given with a 15 months' subscription to American Poultry Journal for 75c, or will be given free for four subscriptions.

Address AMERICAN POULTRY JOURNAL, - - 325 Dearborn Street, CHICAGO, ILL.

# Items of Interest to Buyers and Breeders.

*Editor American Poultry Journal.*

I am having fine hatches this season, present conditions indicate that I shall get out 1,000 fine chicks this month and a good addition to this number in June. I shall have a strong flock of birds for sale during the coming season. Yours truly. *C. H. Latham.*

---

We read a great deal of American goods being exported to all parts of the world, but it probably rests with Steinmesch & Co., St. Louis, Mo., to claim the honor of exporting chick feed across the "briny." This firm is making a shipment of their "Extra Quality Chick Feed" to Mr. Isaac S. Brandon, Kingston, Jamaica. Expansion is the order of the day and made in U. S. A. is now found all over the world.

---

The Stephani Poultry Company, of Belleville, Ill., has been incorporated under the laws of the State with a capital of $15,000, fully paid up. The officers are: E. H. Stephani, president; J. Stephani, vice president, and F. B. Ayers, secretary and manager. The plant is located at Swansea, Ill. The business of raising market and fancy poultry and Belgian hares will be conducted on a large scale.

---

Ira A. Keller, Prospect, Ohio, is offering 200 of his golden and white Wyandottes at greatly reduced prices for the next sixty days. Among the lot are birds which won at New York and elsewhere. He has reduced the price of eggs to $1.50 per sitting straight. He also has a fine lot of imported Belgian hares for sale at low prices.

---

We are informed by the Cleveland Poultry Company, Plattsburg, N. Y., that they have just filled a second order from Porto Rico for "La Porte's Insecticide and Disinfectant." This preparation is a meritorious "lice killer" and is becoming as favorably known abroad as it is at home.

---

The well known firm of Huntington & Page, Indianapolis, Ind., wholesale and retail dealers in all kinds of seeds and implements and agents for Cypress Incubators and Brooders, laid in a stock of Steinmesch Extra Quality Chick Feed and are prepared to fill all orders on the spot, 50 lbs $1.50, 100 lb sack $2.50.

---

CAMDEN, ARK., May 28, 1900.

*W. F. Chamberlain.*

MY DEAR SIR: The Chick Feed sent me by express has been received, and the other, sent by freight, will no doubt be in now soon, and I thank you for promptness in sending same. In regard to my poultry farm, I have, as you no doubt know, the largest and one of the most thoroughly equipped plants in all the South, which I try to keep up-to-date, and which I have stocked with the very choicest, most noted fine bred birds in the world. In fact, I have spent a fortune on my birds, and am sincere in believing, as my great show record has convinced me, that I have the equal to any stock in my line in America. I raise a great many birds each year, and have had many chick foods offered me, which I have thoroughly tested. Last season I used a little sample lot of your feed, and so well pleased was I with it that I decided to try some more of it this season. Just here let me say, I am slow to recommend anything, but in regard to your feed, I never fail to push it, for truly I believe it the greatest Chick Food on earth, as it is nature's own get up. So I recommend it, not just to help you, but to help all poultry raisers, for I have never found its equal. I honestly believe that bowel trouble or improper feeding is the cause of the death of one-third of all the chicks that die, and by using your feed I will guarantee at least a third more to be raised. I have now over 2,000 of the finest, largest and healthiest chicks I have ever raised, and they have been fed on your feed exclusively. Not one grain of anything else have I fed until over one month old, and never have I had chicks to do better—in fact, have raised 90 per cent of all hatched, and at a less cost than ever before. I know a good thing when I honestly find it to be so, and I want to say that I never expect to try to raise any more chicks on anything else but Chamberlain's Chick Feed as long as I can get it. Respectfully,

*G. W. Brown.*

---

Mr. George W. Brown, proprietor of the Ouachita Valley Poultry Farm, Camden, Ark., writes that his breeding pens for this season contain the very choicest prize-winning birds he has ever owned and the equal of any in America. They were exhibited this season in four States, meeting the best from eighteen States and defeating them all, winning 109 prizes. He states that he now has over 2,000 chicks and 1,000 eggs set yet to hear from. This is all he can accommodate and he has decided to make an extraordinary mating, which he thinks has never been equaled before and which will give buyers a choice of a lifetime to get quality. His plan is to reduce his six breeding pens to two pens of each variety and selecting the very choicest and most noted prize-winners to make up these pens; in fact, the very cream of the six pens will be used, and the specimens composing these pens will score from 93 to 96 honest points. He will reduce the price of eggs to $3.00 per setting or two settings for $5.00.

---

S. F. Flint & Son, Peoria, Ill., are offering eggs from their fine matings of White and Buff Wyandottes and Barred Rocks for the balance of the season at $1 per setting. Having set all the eggs they desire to hatch they now have more eggs to fill orders with than formerly, hence the reduction in price. See their ad elsewhere in this number.

---

# 20th Century

Portable Hen Houses,
Roosting Coops,
Brood Coops,
Outdoor Brooders,
Rabbit Hutches.

The principal drawback in the raising of Chickens and Rabbits in the South, and for that matter, in any section of the country, has been

**LICE,**
**MITES**
**and FLEAS.**

It has been my aim in building these Hen Houses, Coops, Brooders and Hutches to have as few places for vermin to harbor in as possible and at the same time is easily cleaned. By the removal of a few screws in each case they can be taken down, scalded for vermin or stored away for next season's use.

Write for prices and photographs. You need them and cannot afford to be without them. Send 10c in stamps for photographs.

SAM D. MACMILLAN,
1202 Twelfth street, Pine Bluff, Ark.

ous and are sure to please those who purchase them. She also has in season eggs from the above varieties. Yours truly, *H. Thorn Hum.*

---

Our readers who are interested in White Wyandottes should write to J. D. Hall, box F, U. P. Station, Des Moines, Ia., and get a copy of his new catalogue, which tells all about his stock, giving show records and illustrations of his plant and some of his winning birds. Mr. Hall says: "We have been breeding poultry for eleven years and not until of recent years have we attempted to place our product before the people. We have spent a vast amount of time and money in producing what we now think is as good a flock of birds as there are in America. We have bred them in line and results show that there are none better."

---

The above illustration is of the noted fox terrier "Norfolk Varacity," which the owner, Mr. J. W. Diehl, of Lafayette, Ind., informs us was imported from England at a cost of $3,500. Mr. Diehl is the proprietor of Lafayette kennels, where may be found some of the most noted and valuable specimens of this breed. These dogs are especially valuable to poultrymen, as they are the best means of ridding the poultry house of rats and are useful in many other ways in protecting the fowls from their natural enemies. They are good watchers and make fine pets. Mr. Diehl has puppies for sale, eligible to registry, at prices ranging from $10 up.

---

G. W. Brown, of Camden, Ark., has sent us a letter from one of his customers in New Zealand, ordering a pen of most prominent show in that country. This is an evidence of the widespread popularity of Mr. Brown's stock. The fine birds to be shown at the largest and fact that he has won many of the most desirable prizes in the strongest competition is a pretty sure indication that his New Zealand customer will also be a heavy winner.

---

George G. Brown, of East Cleveland, O., proprietor of Raycroft Farm, has issued a neat little booklet describing his White Wyandottes and Scotch Collie dogs. Mr. Brown won some of the most desirable prizes last season at Chicago and Cleveland, and in addition to his own large flock of choice specimens he has lately placed in his yards some of the best birds which money could buy. He has one of the Eastern first prize cock birds which is the son of last year's Madison Square winner, and which has won wherever shown. He has over

twenty-first and second prize hens and pullets which he has purchased throughout the East. He has four pens of birds mated and is shipping eggs that are bound to produce winners. There can be no other result from birds of this kind when mated by a breeder who understands his business as does Mr. Brown.

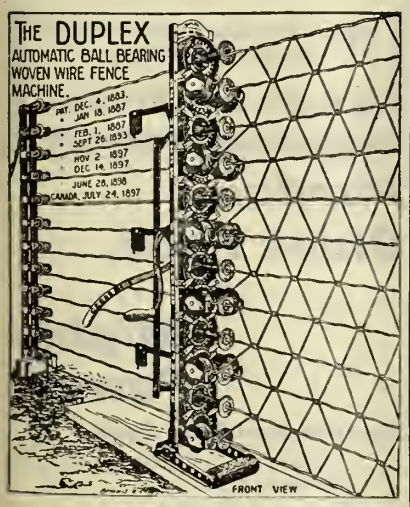
H. E. Bates, Galesburg, Ill., reduces the price of eggs this month to $1 per setting. Many prize winners are hatched in June and this is an opportunity to get eggs from high grade stock at a price which is really less than they are worth. His change of ad appears on another page.

F. C. Bailey, Reading, Mich., has a change of ad this month on page 487. He is offering eggs from his Buff Rocks at $2 for 15. These eggs are from a pen of seven first prize females, scoring from 94¾ to 95½. Mr. Bailey's birds are exceptionally good in wings and tail and they have fine low combs. Their show record is one of the best.

I. T. Bryant, Oxford, Ohio, has reduced the price of his Buff Rock eggs to $1 per 15 for the balance of the season. His eggs are hatching finely and the chicks are showing up in grand shape, giving every evidence that his mating is all right. Mr. Bryant is the well-known treasurer of the Butler Company Poultry Association, which exhibits at Hamilton, Ohio.

## 100 DIFFERENT STYLES OF FENCE.

It seems almost past believing that one little machine which can easily be handled and moved about by one man is capable of weaving over one hundred styles and kinds of farm, lawn, poultry and ornamental fencing. This is, however, true of the Duplex Ball Bearing Woven Wire Fence Machine. It is manufactured by our old friends and advertising patrons the Kitselman Brothers, of Muncie, Ind. The cut shown with this article



gives a very good idea of the machine and its method of operation. It also shows one style of farm fence in course of construction. The Duplex will handle satisfactorily any and all sizes of wire, using large wire for laterals and weaving on any number of smaller sizes of wires. It will also weave perfectly a fence with desirable barb wire at top and bottom, a style of fence much sought after and ap-

**Now is the Time You Want Eggs!**

By feeding your fowls a little

**Banner Egg Food and Tonic**

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

Remember this TONIC does not force your hens to lay, it only brings them up to the pink of condition, which is necessary for egg production.

To those who have never used it, we simply ask you to give it a trial, and be convinced.

Prices: 1 lb. can 25c, by mail 40c; 5 cans $1 on board express in New York.

Eggs, $3 per 13, Write.

**FRED J. PHELPS, Bucyrus, Ohio.**

I have sold the winners at the largest shows, They win for me; they will for you. Try them.

preciated in certain localities. Fence may be made of any desired height up to 50 inches. As to capacity, this will vary somewhat, depending upon many things, but the manufacturers state it conservatively at from 40 to 60 rods of farm fence per day. The Standard Duplex Machine makes a fence up to 50 inches high as stated above, but at a small additional cost special machines may be had which well make fence 54½ and 59 inches high respectively. The Duplex is well and honestly made of good material and with anything like ordinary care will last indefinitely. Kitselman Brothers are also large manufacturers of Ornamental Fence and Gates. These fences are made entirely of wire and iron in the greatest variety of form and fanciful designs. They are so constructed that they will turn all sorts of marauders and at the same time increase rather than detract from the beauty of the enclosure. The ornamental gates and the neat steel posts and rails greatly set off and increase the beauty and strength and value of the fence. Write these people requesting printed matter on fence machines, ornamental fencing and gates and all classes of fence materials.

## WHY NOT KEEP BEES?

There is money in honey if you go about it right. There are thousands of people on farms and in our smaller villages and towns who might earn considerable sums by keeping bees. These people are staying out of a good thing simply because they do not know how easily the money may be made. There is scarcely nothing in which one can start with so small an investment. At the same time to succeed one should read up on the subject, and there is no better hand book on keeping bees than the "ABC of Bee Culture," published and advertised in these columns by the A. I. Root Co., of Medina, Ohio. This work is the recognized and standard authority on the subject. It combines the practical experience and observation of hundreds of the most expert professional bee keepers in this and other countries. It is a veritable encyclopedia and if the fundamental principles it lays down are carefully followed out, and they are so simply stated that it would seem impossible to misunderstand them, we could hardly see how any one could fail of success. These people also publish a very readable and instructive magazine "Gleanings in Bee Culture," sample copies of which they will be very glad to send to any reader of this paper. In addition to publishing the above, this same company are extensive manufacturers of and dealers in all kinds of bee supplies. Their catalogue is very complete and will be sent on request. The Root Co. are well and favorably known by us and it is a pleasure to recommend them and their methods of doing business to our readers. They can be depended on in every way. If inclined to investigate the possibilities of profit from keeping bees in the right way address the A. I. Root Co., Medina, Ohio, and mention this paper.

# News and Announcements of Poultry Associations and Specialty Clubs.

## THE AMERICAN LANGSHAN CLUB.

The catalogue of this club has been received at this office. The Langshans have long been considered one of the leading breeds, and with the efforts of this club they will soon become more popular than ever before. Every one intending to start breeding fancy poultry, or adding another variety to their yards, should send for one of these catalogues. The Langshan breeder who does not receive a copy of it should send for it at once. It contains the by-laws and the application, which, when filled out as requested and sent to the secretary with $1.00 admission fee, will receive immediate attention. The benefits to be derived by joining the club are many, beside the satisfaction of seeing your favorites elevated to the high position they deserve. This has been, and is yet, the aim of this club. That they have succeeded in their efforts is clearly demonstrated by this catalogue and the popularity the Langshans are enjoying. The secretary's address is A. H. Asche, Princeton, Ill.

## TO MEMBERS OF THE NATIONAL WYANDOTTE CLUB.

The time has arrived when it becomes necessary to take up the matter of advertising space in our annual catalogue, which we desire to complete in time for the fall trade. Those who have seen our last catalogue know the class of work we get out. It has been considered the finest ever issued and many helpful articles by prominent and successful breeders have made it a hand book of useful information which insures its preservation, the advertisements come into frequent notice by those who are most likely to make purchases from time to time, and as we open our advertising pages to members only it in a way insures confidence in those who desire to purchase. I would like to hear from those who desire advertising space as soon as possible, stating amount desired. Pages will be 6x9, costing as follows: Whole page, $6.00; half page, $4.00; quarter page, $3.00. We also desire to increase our membership, the cost of same including yearly dues is one dollar. C. S. Mattison, Sec., South Shaftsbury, Vt.

## CLEVELAND POULTRY ASSOCIATION INCORPORATED.

*Editor American Poultry Journal.*

Dear Sir: You will no doubt be interested to know that we have merged the Cleveland Poultry Association into a stock company, capitalized at $5,000.00, with the entire amount of stock for sale now sold. This movement was found necessary in order to enlarge, modernize, and place future Cleveland shows on a plane above that ever before attempted here.

The excellent results had at our show here last season were in the main responsible for this decision, and the management greatly encouraged to place before the poultry fraternity a show of the first magnitude.

The company was incorporated under the laws of Ohio, and we are now ready to do business in a manner which must meet with the approval of all breeders.

The dates selected for the coming show are December 4 to 11, 1901. And Gray's Armory, located in the central part of the city, patronized by the best people of the city, has been engaged in which to hold it.

The score card system of judging has been decided upon, as a majority of breeders in this section of the country desire it. We greatly desire the co-operation and confidence of breeders generally, that we may work in harmony and give to the exhibitors of the Mid-West a show of proportions equaled only by the best in the country.

The officers of the company are president, Mr. John Zipp, who is also president of one of Cleveland's largest wholesale houses; Mr. Geo. E. Conkey, secretary-treasurer of a large contracting firm of this city, vice president; Mr. Geo. G. Brown, state agent for Ohio, Pennsylvania and Indiana for the Maryland Casualty Co., treasurer; Mr. F. R. Hunt, of the Hunt Mfg. Co., secretary.

The directors of the company, Mr. John Zipp, Mr. George G. Brown, Dr. H. M. Ladd, Mr. Geo. E. Conkey, Mr. F. R. Hunt, together with the stockholders of the Cleveland Poultry & Pet Stock Company represent some of Cleveland's most conservative and responsible business men, and nothing but what is correct and right will be tolerated. Cleveland's show should be on the list of all breeders as being the proper show at which to exhibit the coming season.

The prospective plans of the management for the coming great show will be given from time to time as they mature. Yours truly,

*F. R. Hunt, Sec'y,*
*The Cleveland Poultry & Pet Stock Co.*

## TO THE MEMBERS OF THE NATIONAL BANTAM ASSOCIATION:

In accordance with the motion passed at the last annual meeting, I have the pleasure of making public the report of the treasurer for the year ending Feb. 1, 1901. We also append a brief statement of receipts and disbursements from Dec. 15, 1894, to April 5, 1901:

E. LATHAM, Secretary.

## SOUTHERN INTER-STATE FAIR.

Atlanta, October 9-26, 1901.

The great fair to held at Atlanta this fall, October 9 to 26, will be the third of its kind. The fairs of 1899 and 1900 were successful from every point of consideration. Exhibits in all lines were complete. The attendance was far beyond expectations, and each year gave a handsome balance on the right side of the ledger. The live stock show at the Southern Inter-State fair is second to none in the United States. In one particular this fair is ahead of any in the country, and that is in the matter of sales made. The exhibitors are unanimous in saying that they sell more stock at Atlanta than at any of the other great fairs they attend. The Poultry show will be held in the Coliseum (Horse Show building). The coops will be put in the great arena measuring 95x245 feet. This ample space permits of broad aisles between the coops and the extensive paddock connected with the building affords ample facilities for receiving and shipping exhibits. There were more than 4,000 entries for our Poultry show last year, and the list will undoubtedly be much larger this year. Our classification will be made "up to date," and the premiums will aggregate $2,000. The dates of the Poultry show will be October 14-19 inclusive. Premium list will be ready June 1.

These shows have always been cooped by Spratt's Patent, and there will be no exception this year. Genial Mr. Rackham will be on hand with the up-to-date equipment of that well-known house and it goes without saying that everything will be managed in tiptop style.

## NORTHUP TO JUDGE MINORCAS AT PHILADELPHIA.

At a meeting of the Board of Directors of the American Black Minorca Club, held in New York city, on the 1st of May, the names of George H. Northup, F. B. Zimmer and Rowland Story were recommended to the Philadelphia Poultry Association from which to select a judge of the Minorca class at the next Philadelphia show. Northup received 27 votes, Zimmer 23, Story 1, others 4. Since last club meeting fifteen new members have been received and the outlook for many more is very encouraging. Those wishing copies of the Club Catalogue will please inclose a 3-cent stamp to the secretary, who will be pleased to forward same. Charles L. Blanton, Sec.-Treas., Falls Church, Va.

## POLAND CHINAS AT KANSAS CITY SWINE SHOW.

The National Swine Show, to be held at Kansas City, Mo., October 7 to 11, 1901, by the breeders of the Poland-Chinas, Berkshire and Duroc-Jerseys, is

of more than passing interest to all interested in the swine industry in this and foreign countries.

This show promises to be a record breaker and all parties breeding any of the above varieties should give the show their hearty support by subscribing towards the special list, entering as many animals as possible for competition and sale, and by personal attendance. It is expected that this show will do more to arouse interest in the swine industry in this country than any heretofore held. The location is good as it is of easy access for the large stock interests of this country. Illinois is conceded to be one of the great stock centers both for breeding and for the sale of swine, if not the greatest, so it is confidentially expected that Illinois breeders will extend a helping hand and do all in their power to make this show a success. By so doing it will advertise the Illinois herds and open a new field of operation.

The premium list covers the regular State fair prize list and in addition the following, as to Poland-China:

1. Boar and not less than four of his get, any age or sex.
2. Sow and not less than four of her pigs, under six months.
3. Sow and one of her produce, any age or sex.
4. Boar and sow, any age.
5. Two swine, any age or sex, produce of same sow.
6. Boar and sow, six months and under a year.
7. Boar and sow under six months.
8. Two boars, any age.
9. Two boars under six months.
10. Two sows, any age.
11. Two sows, six months and under a year.
12. Two sows, under six months.
13. Four pigs, under six months, get of same boar.
14. Six pigs, any sex, under six months.
15. Ten hogs, any age or sex.
16. To the feeder of the best fitted exhibit.

It is expected that the Poland-China men will turn out in force and support their favorites, both in the show and sale rings. All indications point to an exceptionally large show in the Berkshire and Duroc-Jersey, so it behooves the Poland breeders to be up and doing to place their breed where it belongs.

The judges selected by the Poland committee the T. B. Hart of Illinois, W. M. McFadden of Iowa, and J. M. Klever and J. C. Hendricks of Ohio. Later W. Z. Swallow, of Booneville, Iowa, was selected in the place of W. M. McFadden, who is unable to serve. The same method of judging will be followed as has been adopted by the cattle men at Kansas City. Two judges will be on one class with a referee and one man out; on the next class this judge will be in and the referee changed, thus rotating the judges each time.

For further particulars address F. D. Winn, 1500 Grand avenue, Kansas City, Mo., or R. D. Burnham, Champaign, Ill., representing Illinois Poland men.

———o———

The Maine State Poultry and Pet Stock Association has been incorporated under the laws of the State of Maine and has elected the following officers: President, Charles L. Cushman, Auburn; vice president, I. V. McKenney, West Auburn; secretary, Geo. P. Coffin, So. Freeport; assistant secretary, A. L. Merrill, Au-

MAJESTIC STRAIN
**White Wyandottes**

There are no handsomer, more profitable birds in the world than the White Wyandottes. My stock is farm raised from prize winners at big eastern shows. Yearling stock ready for shipment, a limited number of pullets and plenty of cockerels. Score Cards by Judge J. Y. Bicknell.

At Rochester, N. Y. poultry show was first on cock; first and second on hens; first and fifth on cockerels; first on pullets; first on pen, besides specials. I guarantee satisfaction in every particular.

**EGGS FOR HATCHING**

from stock scoring 93½ to 96½ points; one setting $5.00, two settings $8.00. A trio of pedigreed Belgian Hares for sale.

C. S. Wetmore, Box 877 Lockport, N. Y.

MRS A. L. HEATH, PROP.,
Fayette, Iowa.
The home of Heath's Barred and Buff Rocks, also Buff Cochin Bantams. Have made two exhibits—won four 1sts, four 2ds, two 4ths, three 5ths and two specials. Eggs and stock in season. Write your wants and mention A. P. J.

burn; treasurer, H. C. Day, Auburn. The first exhibition will be held in City Hall, Lewiston, December 17-20, 1901. The poultry judges chosen are Messrs. A. C. Hawkins, D. J. Lambert and W. B. Atherton. Liberal prizes will be offered on all varieties of poultry, and particular attention will also be paid to the utility side, and the display of dressed poultry and eggs will be an interesting exhibit. There will also be literary exercises consisting of lectures and practical illustrations by the most skillful breeders in the country. Certain lines of experimental work will be undertaken and object lessons of great value thus brought out. In short, the exhibition promises to be of great importance to every poultry breeder and farmer in the State and deserving of the liberal patronage it hopes to secure.

---

The Peoria Fanciers' Association, of Peoria, Ill., at their last meeting fixed the following dates for their show the coming winter: Dec. 27, 28, 29, 30 and 31, 1901, and Jan. 1, 1902. They announce that Mr. Theo. Hewes will judge the poultry and that they will secure competent judges for the other classes. The enthusiasm displayed by the members of this association this year speaks well for the success of their exhibition and we have no doubt they will give another of the rousing Peoria shows. Their enviable reputation for square dealing and fair play has made the Peoria show a favorite with visiting exhibitors. H. C. Schwab, secretary, Peoria, Ill., will take pleasure in answering promptly all requests for information in regard to this show.

---

The Pontiac, Poultry, Pigeon and Pet Stock Club, Pontiac, Mich., has elected the following officers: President, William J. Hammond; first vice president, Dr. J. F. Spring; second vice president, E. B. Wright; treasurer, Joseph Nusbaumer; secretary, Daniel Thomas; secretary dog department, S. S. Crohn; superintendent poultry, John Brown.

J. Y. Bicknell will judge the next show which will be held January 14 to 17, 1902.

---

The next annual show of the Flint Poultry Fanciers' Club of Flint, Mich., will be held January 14 to 17, 1902. The association has secured the services of Thomas F. Rigg, of Iowa Falls, Iowa, to act as judge. Any information relative to the show will be cheerfully furnished by the secretary, Mr. Frank Bovee.

---

The Garden City Poultry Association will hold their third annual show at Garden City, Mo., November 26th to 29th.

This association has always paid its obligations prompty and in full, and they now have a balance in the treasury with which to run the next show. The officers are exerting every effort to make the next show more of a success than former ones.

Thomas W. Southard, of Kansas City, has been secured to judge the show.

Mr. T. J. Jones, the secretary, urges all poultry men in that section of the state to join the association. The membership fee is only fifty cents, and the advantages to be derived from membership more than justifies this small outlay.

The names of all the members will be printed in the premium list.

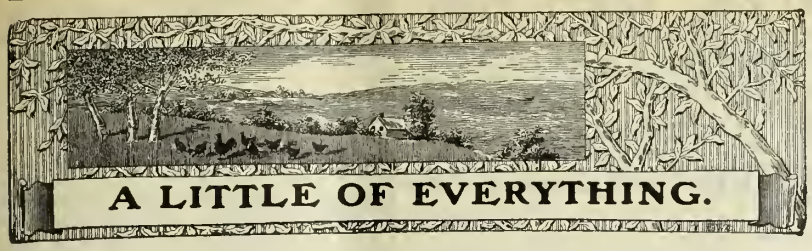
WYANDOTTES
Winners of all firsts and all seconds but one at St. Louis Show Jan. 7th to 12th, 1901, Butterfield, judge: score, 92 to 94½, 4 grand breeding yards, mated right. True Wyandotte shape, open laced females and the celebrated Steinmesch Laced Wing Bar. Eggs for hatching, $3.00 for 13 straight. Circular free.
HENRY STEINMESCH
Lincoln Trust Bldg. St. Louis, Mo.



*Egg Eating.*

The best way which I have found to cure the egg-eating habit is to feed the hens all the shells they will eat and not feed them anything for two days except soft food, in which has been placed a large quantity of shells. You can rest assured that this will cure them and they will stay cured for the whole season. *John P. Peterson, St. Paul, Minn.*

*Unfertile Eggs.*

From our experience this season we are of the opinion that eggs from fowls that began to lay in the fall and kept everlastingly at it all winter are not the ones to use for hatching. Every spring we hear about poor hatches. There is a cause for it. Don't try to hatch eggs from stock that have been laying all winter. Use only the spring layers and the result will be much more satisfactory. This has been our experience. *Fred Keith & Son, Lansing, Mich.*

*Green Food, Nest Eggs, Yellow Corn.*

When green oats, wheat or rye get too tough for young chicks to pick, take the stalks and with a sharp knife cut into bits one-quarter inch long. You will be surprised to see how greedily young chicks and old ones, too, devour it. Feed first thing in the morning and last thing at night. We have found camphor balls to be just the thing for "nest eggs" either for sitters or layers. They do not injure the little chicks. Try yellow corn only for Buff fowls. *H. P. Mason, Fayette, Mo.*

*Feeding.*

Heretofore I have fed chicks 12 to 24 hours after hatching. This season I have waited 48 hours and find that the chicks are livelier and do better and am troubled with less bowel complaint than last season. Don't disturb them, but let them keep nice and warm for 36 to 48 hours, and you will get better results. *E. B. Wright, Birmingham, Mich.*

*Sell Your Broilers Now.*

Now is the time to sell broilers and young ducks, while prices are high. Ship chicks as soon as they weigh 1 1-4 lbs. each and ducks 2 lbs. each. The sooner you get them on the market the more they will bring. If chickens are droopy look out for lice. We advise poultrymen to keep a can of Lice and Insect Killer on hand, and use it occasionally to be on the safe side, as nine-tenths of chicken diseases are caused by lice. *Sprague Commission Co., 218 S. Water St., Chicago.*

*Such a Price.*

Why pay $1, $2, $3 or $5 for a setting of eggs from anyone when A has fine stock just as good as any at 50c per 15, with a guarantee of 14 chicks? Of course he never exhibited his birds, but if they had been shown they would have won, for there were none as good there. Or why pay $10 for a male with the requirements necessary to promote advancement without reaping some reward, as this bird will surely reproduce himself several times over and each at one-fifth of the price of sire would undoubtedly find many buyers, besides the stock improvement. *Elm Poultry Yards, Hartford, Conn.*

*Indian Runner Ducks.*

Indian Runners are easily the most beautiful and profitable ducks in America today. Their egg production is simply amazing. Six ducks with us produced 6 eggs per morning for months and each 12 eggs set produced 11 and 12 young. They are easy to raise, mature and lay early, and with decent care and feed will lay all winter and all summer until molting time. Try them. *Thos. H. Mills, Port Huron, Mich.*

*Can Roup Be Cured?*

I have never found but one sure cure and that is the hatchet. I know it takes grit to butcher your pets, but then you must remember you are saving the lives of what is left. Some claim they can cure roup, but just as long as they try it just so long will it keep cropping out when least expected. I would as soon breed from a glandered horse as from a diseased fowl. *W. H. Fisher, LaFayette, Ind.*

*Keep the Fowls Busy.*

Go where you will the world over, the prime causes of failure with fowls may be summed up as follows: Idleness one of the main features, lack of attention, poor feeding, overcrowding and filth. Remove these obstacles and better results will come at once. When it is so very easy to succeed everyone should feel ashamed at failure. Patience and care are two winning elements; without them we cannot hope for success. *Ed Isley, Hope, Ind.*

*The Harvest Time.*

Work, work, work. This is the time of year when in every direction we can see the need of utilizing every moment of time as well as every bit of strength that we have in order to have everything in readiness for the harvest time, which comes in the chicken business as well as to the grain and stock raiser. Chickens neglected now will not give you good returns later on. *Mrs. J. M. Denison, Elgin, Ill.*

*Points for the Farmer.*

If the farmer would keep thoroughbred poultry for the egg trade alone and stamp his name on every strictly fresh egg he sells in a very short time he could demand from 2 to 5 cents a dozen more than market price for his eggs. He would have eggs of uniform size and color, and that his customers could rely on as being fresh, and they would add still more new customers for him almost every trip he made to town. By keeping a book account of proceeds and the expenditures for one

**Bennett's Buff Rocks**

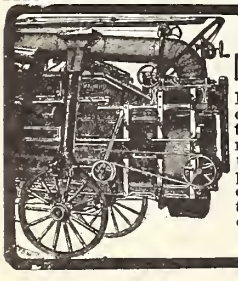
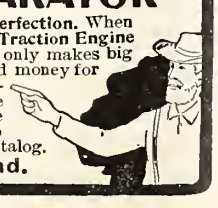
Breeds high class Barred Plymouth Rocks and Houdans. Twelve grand pens. Eggs from Indianapolis winners. 200 breeders for sale after May 15th.

***BERT H. WHITE, Prop., Box 2415, Battle Creek, Mich.***



## The Business End of the NEW RUMELY SEPARATOR

Like all the **"Rumely Goods"** this is simply perfection. When coupled to our **New Rumely Rear Geared Traction Engine** they constitute a threshing outfit that not only makes big money for the thresher, but saves grain and money for the farmer. They are durable beyond comparison and when you buy them you are done buying for years to come. Take a little time to think about how it would pay you to own such an outfit, then write us for free catalog.



**M. RUMELY CO., La Porte, Ind.**

year he would find it the best paying investment on the farm for the capital invested. This may look small in the eye of the large farmer, but it is an eye-opener just the same. Take my advice and try it. *H. A. Emmel, Ogle, Pa.*

*Procrastination.*

Take time by the forelock and never put off for the morrow what needs doing to-day; there is never but one right time to do anything after which it needs be done at a sacrifice. The poultry business is no exception. Remember, it is the early bird that catches the worm, also that wins the ribbon and lays the golden eggs that bring top prices in early winter, hence procrastination is truly the thief of time. *M. L. Edson, Jacksonville, Ill.*

*Some Pointers.*

We have found by repeated experiments that feeding mash in the morning gives us better results. When setting hens do so in the evening, as they are not likely to leave the nest in the morning. Remember that hens make better setters than pullets. Do not have chicks hatch later than May 15 if you want winter layers. Do not hatch in January and February, if you have not the proper facilities to care for the chicks. Choose your breed and stick to it. *C. F. Coleman, Geneva, Ohio.*

*Something Important.*

Place clean, cool, drinking water before your fowls at least three times a day during the hot weather. Keep the dishes clean. Remember it takes water as well as feed to make eggs and keep the birds healthy. *James H. & Flora A. Waddell, Wauseon, Ohio.*

*Feeding Chicks.*

By all means I want to advise all poultry fanciers to feed their young chicks a mixed feed, consisting of large millet seed, oatmeal, hulled oats and chick grit, and you will find there is nothing better. I wish you could see 100 Rose Comb Buff Orpington chicks which get nothing but the above, and you would pronounce them the finest you ever saw. *Jacob S. Handte, Calla, Ohio.*

*Setting Hens.*

Always have an extra setting hen for use in case anything should happen to any hens that are incubating. This precaution will often save you loss and should not be neglected. *Leslie Parlin, St. Paul, Minn.*

*Feeding Little Chick.*

When they are first hatched feed nothing for 24 hours. Then I give millet seed for two weeks. Then cracked wheat till they are large enough to eat. I steam the cracked corn and feed cold. If you feed this way you will never have any bowel trouble. *W. P. March, Winamac, Ind.*

*Keeping Hens Without Male Birds.*

We have tried both ways and must frankly admit, so far as our experience goes, there is nothin to be gained—where eggs alone are desired—either keeping the hens with or without a male. We have tried both ways and can see no difference. The only disadvantage we can offer to any one keeping females without a male is this, it is not an infrequent thing for every poultryman

**There's MONEY IN IT**

The poultry business pays when conducted under the rules laid down in our **NEW POULTRY BOOK & CATALOG FOR 1901.** Handsomely printed in colors, giving cuts and description of the leading breeds of fowls. did that last old hen bring out? No matter. You would have gotten more if you had put the eggs into our

**BANTAM HATCHER.**

Self-Regulating

It hatches every hatchable egg and the beauty is that they are strong, vigorous fellows; able to live and amount to something. Then too they are free from lice. It's a wizzard among hatchers and its price is ridiculously low. 50 egg size $5. Sent on 30 days free trial. Send 4c for No. 2 catalog.

BUCKEYE INCUBATOR CO., Springfield, O.

**SUCCESSFUL ALWAYS SUCCESSFUL**

Successful Incubators and Brooders have contributed more to success of poultry keeping in recent years than any three other makes. They always succeed because they are built right. Send 6c in stamps for our new 154 page book on Incubators and Brooders. It tells of the success of poultry raisers who incubate with the Successful. Printed in 5 languages.

DES MOINES INCUBATOR COMPANY,
Box 1, Des Moines, Ia.

**BULL-STRONG!**

**....PIG-TIGHT....**

An Illinois farmer said that after harvest he had fully 200 bushels of loose oats on the ground that he could not secure any benefit from, because the fence around the field would not turn hogs. Figure the loss for yourself. He also said, all this would have been saved if he had used the Kitselman Woven Wire **Coiled Spring Fence,** and the value would have gone a long ways towards paying cost of the fence.

With the **Duplex Machine** any farmer can make it himself at the actual cost of the wire. Catalogue free for the asking.

KITSELMAN BROS.
Box D14. Muncie, Ind.

to have a chance to sell eggs from strong, vigorous stock for hatching, especially is this true if his stock is known throughout the neighborhood as money makers and for this reason we think it practical to keep the yards headed by good, strong, vigorous males, as more can be had for eggs for hatching than when sold for table purposes on the market stalls. But where there is no male birds with the hens the eggs will keep somewhat longer on account of the non-fertility of them. *J. B. Palmer, Northville, Mich.*

*Early Chicks Not Numerous.*

So say a great many who have written us. That this season has been an off one with a great many is no doubt true. Eggs have simply failed to hatch for reasons not easy to account for. In most cases the greater per cent prove fertile, but chicks die at different stages during incubation. That this difficulty prevails even among those breeding from mongrels, or as some say the scrub hen, it is conditions in the past weather that produces the cause, possibly the feeds to some extent. *F. H. Shellabarger, West Liberty, Iowa.*

*Setting Hens.*

This is the time of year that the lice get in their big licks. See that setting hens are well dusted and have a good dust bath.

I take a barrel and saw a square hole just above the bottom hoops. Set it up and fill with hay. It makes the best nest for hatching I ever tried. Keep everlastingly at it is the secret of success with poultry or anything else. The last thing at night with the hen business and the first thing in the morning. *E. F. Trask, Beverly, Mass.*

*Setting Hens Second Time.*

We do not agree with Dr. Ballard about setting hens. We have three hens new setting for their third brood, and they are as healthy and in better condition than they were when we got them from a farmer. We always set our hens in an out-shed barn, keep corn, water, grit and dust by them so they can get it at will, and have had as good hatches from even the fourth time as the first. *J. Watt of Watt & Campbell, Lacon, Ill.*

*Hatch Chicks During Entire Winter.*

The market at the present time is such that it demands young fowls at every period of the season, and for this reason we think it advisable to hatch a few chickens and have them ready for market at all seasons of the year. Here is where the profit in the market poultry line comes in, and in our large cities are to be found quick markets for products of this kind at every week and season of the year. *J. B. Palmer, Northville, Mich.*

*Dried Meat Scraps and Green Bone.*

Dried meat or scraps cannot be expected to produce as good results as fresh meat or ground green bone, for the simple reason that the very ingredients needed by the constitution of the fowl are evaporated in the drying process which the fresh beef scraps are put through converting them into the dry animal food offered on the market. In feeding ground green bone and beef scraps our allowance to each hen is five ounces per week. This is the best egg food we have had any experience

with. When fed judiciously we have never found either the dried beef scraps, dried hone or ground green hone injurious. *J. B. Palmer, Northville, Mich.*

*Soft Shelled Eggs.*

As is the case with hens too fat to lay a natural, healthy, encased egg, so it is with those that lay an egg covered with a skin or membrane in place of a perfect shell. Well, healthy, well-kept hens do not and never will lay these eggs, and the cause of both soft-shell and eggs covered with the thin membrane described can he directly attributed to poor condition and over-fed stock. The only effectual way we have found of successfully treating fowls of average value afflicted with such diseases as roup, canker, rheumatism, etc., was the immediate application of a sharp hatchet just back of the head. This is the most sensible, profitable and easily applied remedy known to the writer. *J. B. Palmer, Northville, Mich.*

*Feeding.*

We always feed our fowls soft mash in the morning and light food or fine grain scattered in the litter for noon and a heavy feed (all they will eat) of grain for the evening meal. At one time we reversed this and fed the soft feed at night, hut as the results were not as good as when the soft feed was fed in the morning we changed back to the "old way" with advantage to ourselves and flock. Experience has taught us a diet composed entirely of grains was not as good as one composed of soft cooked food and grains. Then, too, fowls fed on a part ration of cooked food can be kept at a much less cost than when fed grain alone. *J. B. Palmer, Northville, Mich.*

*Late Hatched Chicks.*

It is very hard to say whether a chick hatched in September under artificial conditions will grow equally as well as will one hatched in May or June. Sometimes we have thought that chickens hatched late in the season do not grow as well, and then again have been led to helieve, from actual experience and observation, that there is practically no difference. Of course where fowls are handled this way in the fall they have to he perfectly surrounded artificially with all the conditions under which they grow and mature in the springtime. This attaches considerahle more expense to their growth and production, but this point is ohviated hy the advanced prices which are secured for them in the market. Although we have wanted to many times, we have not yet had an opportunity to experiment with fall-hatched pullets and their laying qualities as compared with those hatched in other seasons, and for this reason it would he impossible for us to give any information on this point. *J. B. Palmer, Northville, Mich.*

*Old Hens Not Profitable.*

In reference to the query, "Does it pay to keep old hens, and if so how long?" we say emphatically, "No." We do not helieve old hens can he used to advantage to any one. Cases are known where extra good laying hens have paid well for two years, hut these instances are so rare it is not advisahle to suggest that any over two and a half years be kept if profit is to he realized from them. We have always found that yearling and

**G. C. FLEGEL & SON, Westville, Ind.**

two-year-old hens were the moneymakers. After they pass this age they begin to decline in money-earning value. *J. B. Palmer, Northville, Mich.*

*Mating.*

No regular rule can be laid down as to the number of hens which can be mated to one male. In such varieties as the Mediterranean, sometimes fifteen, eighteen and even twenty hens can be mated with one male with good results, where in the American class eight, ten and fifteen are the best numbers; while for the Asiatics we would advise no more than eight or ten females to each male. Of course, instances are known and our experience bears us out in saying that sometimes even more than these numbers can be entrusted to some males, but not to all. *J. B. Palmer, Northville, Mich.*

*Cure for Roup.*

Take a small quantity of glycerine and put into it a couple of drops of essence of wintergreen. Pour this into the fowls' nostrils and in the throat. I find by experience that this is the best thing for roup or if the eyes are swollen or closed. Do not let the disease get too far advanced. Treat it at once. Use lime on the dropping boards. Keep charcoal grit where they can get plenty of it. Then if they get the roup or a bad cold they will not get diarrhea, which weakens them so that they cannot be treated satisfactorily. A little ginger in the food is good. *Lloyd M. Hallenbeck, Catskill Station, N. Y.*

*Artificial Hatching.*

After five years' experience with incubators my best hatches are obtained by keeping temperature at 103; take egg tray out of machine to turn eggs, turn eggs by hand, change position of eggs each time, say, take out two rows at end of tray and place in opposite end of tray near lamp each time you turn eggs. If room is cool set tray on a blanket and keep covered as you turn; allow no draft. Close machine while turning. Use no moisture, use plenty of ventilation, give chicks fresh air while hatching. Keep temperature at 103. If you have no nursery remove dry chicks quickly and every few hours; do not remove tray until done hatching. *Mrs. A. J. Colvin, Milton, Ill.*

*Make Your Ducks Work.*

Feed them small grain, such as millet seed, wheat, rye, cracked corn (bolted) in hay chaff or other chaff; fine sand—where they can get it—or broken crinklers, from shops or engines where they use soft coal. Give them green feed once each day if they can't get grass, or cut blue grass sod and put in coops or brooder. Put fresh water or milk where they can get their beaks in it, but not their feet, and they will grow. *Sid Conger, Shelbyville, Ind.*

*Setting a Hen.*

Everybody seems to be telling how they set a hen. I like to have a good roomy nest well patted down and a medium-sized or small quiet hen which is a good fighter and sandy. A sandy hen will protect her chicks from hawks, etc., to the last minute, and will many times guard off her adversary till she gets help from her owner. I would rather have a hen in thin flesh than a big, awkward fat hen. A fat hen will almost invariably break some eggs, but by letting her set a week without any eggs she will lose some of her flesh. I dust the hen several times with Persian insect powder. *A. C. Grose, R. D. No. 4, Findlay, Ohio.*

*Care of Breeding Stock.*

Hot weather is coming on and if the hens are too fat they will die like sheep. I get letters every day from parties saying that their hens are dying, the droppings being yellow, then green. The cause is that the hens are too fat and have indigestion. Feed only once each free range and, if possible, let them roost in an open shed. You will be surprised at the good results. Follow naday and very little at that. Give them ture as closely as possible. *Jno. N. Sontag, St. Charles, Ill.*

**It is Your Cake**

# Questions and Answers.

Our Subscribers are invited to make use of this department whenever we can be of service to them. All questions are answered in the order in which they are received. If your question is not answered in this number, look for it next month.

*Editor American Poultry Journal,*

DEAR SIR: I have some chickens about a month old that get weak legs, otherwise spry and lively. Is there a cure? They are on a dirt floor now but have had them on a board floor for some time. They are not closely confined. Have plenty of room. Please give a cure and oblige. *R. C. B.*

*Lexington, Neb.*

We respectfully refer this subscriber and a dozen or two others who ask practically the same questions, to the article on leg weakness on page 447 of April number.

*Editor American Poultry Journal.*

DEAR SIR: What makes ducks go lame without accident and how do you treat them? *W. K.*

*Fishkill Landing, N. Y.*

In the absence of a description of the surroundings, methods of feeding and other details we would judge that the birds have been overfed and too heavily forced for weight, especially if the trouble is with young stock. Feed less and give plenty of green food.

*Editor American Poultry Journal.*

DEAR SIR: As a subscribed to your valuable paper I want to ask you a few questions in regard to poultry houses.

In addition to our present poultry houses we intend to build a house to accommodate 200 Single Comb Brown Leghorn hens.

Of course, in answering my questions, you will bear in mind that the climate is that of Rochester, N. Y., where the winters are often quite severe.

Would a double deck house be advisable? Would you advise the use of artificial heat in such a house, by a coil of hot water pipe. Of course I mean just enough heat to keep the temperature above the freezing point.

Would not a house with open scratching shed be too cold for the breed in question. *J. S., Jr.*

*Rochester, N. Y.*

We are quite sure that you will find it a great mistake to build a "double decked" house with the intention of keeping fowls on the upper floor. We have yet to learn of a single plant anywhere which has been a success built in this way. We would also advise you not to use artificial heat in your hen house. This house can be double lined with building paper between and made sufficiently warm for the fowls. As for scratching sheds, we would erect the houses so as to have these because you could no doubt use them most of the year and when the weather did not permit of it, they could be closed with movable fronts or heavy curtains.

*Editor American Poultry Journal.*

DEAR SIR: I get a great deal of valuable information from A. P. J., and take the liberty of asking for more. Please inform me if it would injure the breeding qualities of a cock bird to cut off his spurs and toe nails? Mine fight so, and I would like to prevent it if possible. Do you think that dried beef scrap will entirely take the place of meat? I am making my runs one rod wide. How long should they be to accommodate 25 chicks? What kind of green stuff would be best to sow in the runs, something that will grow quickly? How long should a run be to accommodate 35 laying hens, it being 24 feet wide? Will two male birds be a sufficient number to place with 35 hens? *H. J. P., Mendon, O.*

Trimming the spurs and nails of the male bird will have no effect upon the reproductive powers of the bird. Dried beef scrap as a food is not equal to fresh meat, which contains all the juices and life-producing elements. The larger you can make your runs the better it will be. If possible, give them 10 square feet for each bird. The best green food would be rape, millet or rye. Rape does best in ground that is not too dry. The number of females to be given each male depends upon the age and vigor of the male, also the breed. With Brahmas 35 hens to two males would be too many, but with Leghorns it might be all right under favorable conditions. We would advise you to not mate more than 12 females with a male.

*Editor American Poultry Journal.*

DEAR SIR: Our birds are afflicted with a disease which we do not understand. Their eyes become sore and their heads are badly swollen. In some cases the eyes are swollen shut. A thick yellow pus comes in the mouth and throat. Scabby excrescences form upon the combs of some of the birds. We would be thankful to you for any information you can give. *A. T. D.*

*Hillsboro, Ky.*

The symptoms you describe are those of roup and sore head or chicken pox. Anoint the scabby formations with carbolated vaseline twice each day. Treat them for roup. Bathe the face with peroxide of hydrogen two or three times a day and inject it into the nostrils and swab out the throat with it. Disinfect the premises. Whitewash everything and clean up thoroughly. See that the quarters are not damp.

*Editor American Poultry Journal.*

DEAR SIR: Will you please answer the following questions in the next issue of your excellent paper, the A. P. J.?

How can I secure the best results in egg production and general usefulness? Should I practice line-breeding with three pens of white Wyandottes, trap nests being used?

How and how often should I introduce new blood when line-breeding for egg production?

Do you know of any system of breeding which would insure better results when breeding for egg production than line-breeding? If so, will you please describe? *A. D. G., Wells River, Vt.*

Line-breeding is the only sure way of developing any special characteristics. It is merely the breeding together of the specimens of one family or lot of fowls. New blood should be introduced through the female. With three pens of birds you would not need new blood for sev-

eral years if you line-breed properly. These things are treated at length and fully explained on page 234 of the March number. We cannot take the space here to again go into details. If you have not the March number, send five cents for a copy.

*Editor American Poultry Journal.*

DEAR SIR: I have two hens that yesterday morning (Wednesday) refused to go off the roost or to eat and drink. They stood around and appeared weak, with feathers ruffled, and Monday morning they were dead. They were spry, healthy hens in good condition. There was no sign of roup or any disease. This makes five we have lost in this way. Please tell me what you know about it. *A. J. A., Bashan, O.*

What we *know* about it from the information you give is very little, and what we *guess* about it is liable to be so wide of the mark that we will not venture an opinion. The symptoms described are those common to a number of diseases. You state that there were no signs of any disease. The fact that the birds were affected is evidence that symptoms peculiar to the disease were present, but that you failed to detect them. There is something wrong with the feed, water or mode of caring for the fowls, and as we know nothing of these details we cannot intelligently say what the trouble is. We would suggest that you give these items your close attention. Separate the sick from the well and see that all are free from lice. Notice the sick birds closely and ascertain more definitely how they are affected. In cases of this kind a post mortem examination should be made. For the benefit of all readers of this department we wish to state that we cannot answer questions of this character satisfactorily unless we are made fully acquainted with the surroundings, etc., under which the birds are kept and a careful description of the symptoms of the disease.

*Editor American Poultry Journal.*

DEAR SIR: Will you please tell me what is the matter with my little chickens? They seem to be afflicted with some sort of nervous or spinal trouble. From the time they are hatched they seem to have no control over themselves. They will draw back their heads and fall over and are unable to stand still. Can you suggest a remedy? *Mrs. E. H. Danville, Ill.*

The cause of the trouble may be that the breeding stock is not strong and healthy, and therefore not capable of producing vigorous offspring. The chicks may not be kept warm enough or lice may be getting in their work. We are inclined to believe that this latter suggestion will cover the case. The large head lice found on chicks will affect them in the manner you describe.

*Editor American Poultry Journal. . . . .*

DEAR SIR: I have started to stock my little farm this spring and have bought barred Rocks. I have now taken a fancy to the Light Brahmas. What objection is there to this breed as a general purpose fowl? Don't they lay as many eggs as the Rocks? Do they eat more or does it take longer for them to mature? I thought that their extra weight would add quite a bit as a market fowl. *Toledo, O.* *W. H. S.*

If you fancy the Brahmas, we would

From yards containing the winners of over 50 prizes at Chicago and other big shows. Don't miss this chance.

**EGGS—Rocks and Leghorns, $1.50 per 13; Reds, $1 per 13.**

**C. A. DAMON,** Pres. Am. S. C. Br. Leghorn Club. Director Nat'l Fanciers Assn. **2470 Monroe st., CHICAGO.**

advise you to get them. They are heavier than the Rocks and of course bring more in the market when large birds are wanted. They eat more and as a rule lay fewer eggs. There is a prejudice against feather legged birds for market purposes. Brahmas which have been bred for egg purposes have been known to equal the best of other varieties as layers.

*Editor American Poultry Journal.*

DEAR SIR: I have some hens afflicted with a disease unknown to me. They refuse to eat or drink and they droop around with tails down and eyes kept closed except when disturbed. The droppings are green and white. From being fat, heavy hens they have become mere skeletons, the disease lasting two to three weeks. I feed hot bran mash in the morning and corn and oats for the other meals. The hens are Light Brahmas and Plymouth Rocks. Kindly inform me what the ailment is and give me a remedy. *F. O. W. Weir City, Kas.*

From the limited information you give we surmise that the birds are suffering from gastro enteritis. Your morning mash should contain something besides bran. Your bill of fare is composed of grain exclusively and the birds will not thrive under these conditions. Have your mash food composed of various ground grains. Use meat meal, ground beef scraps or some kind of animal food. Give the birds green bone and fresh meat if you can get the other articles. See also that they have some kind of green food, and give them powdered charcoal once each day in the mash for a while, a teaspoonful for each bird. Give the sick birds a teaspoonful of castor oil or olive oil as a laxative for the purpose of carrying off any special irritating matters which may be present in the intestines. Follow this with three-fourths of a grain of bicarbonate of soda and two grains of subnitrate of bismuth in a little water three times a day. If the diarrhea is very bad and seems to be painful, with fever or bloody discharges, the bicarbonate of soda may be omitted and one-eighth grain of powdered opium substituted.

*Editor American Poultry Journal.*

DEAR SIR: Will you please tell me what is the trouble with my Leghorn hen? She will walk a short distance and her legs seem to give out and at times her eyes will swell shut. She will get all right for a day or so and then the trouble returns. *Mrs. C. B., Hurricane Lake, N. D.*

The leg weakness may be the result of several conditions, but as the eyes are affected also we presume that the lameness is of a rheumatic nature and the swelling of the eyes is the result of the bird catching cold, both of which troubles may be caused by housing in damp quarters. The information you give is too meager to enable us to do much more than guess at the matter.

*Editor American Poultry Journal.*

DEAR SIR: I would like to ask your opinion of the following disease. The bird is mopish except at feeding time when it becomes quite active. The appetite is fine throughout its illness. I killed the last hen affected and found upon post-mortem examination that the heart, lungs and connecting tissue were very much affected, especially the heart, which was almost entirely covered with small whitish spots. I would like to know the name of the disease and how it is apt to originate. Also please let me know how long it is safe to keep eggs for hatching, without injury. *W. E. S., Oakville, Ore.*

The disease is probably tuberculosis. Birds thus affected show the symptoms you describe but there is also rapid emaciation, which may be detected by the loss of weight and wasting of the muscles, leaving the bones prominent. In the later stages a persistent diarrhea appears and the bird dies of exhaustion. Tuberculosis is caused by a baccillus. The disease is contagious and is usually brought into a flock with the introduction of new birds. It has also been attributed to infection from eating the sputum of persons affected with consumption. There is no cure for it. The entire flock is liable to infection and is usually affected. An apparently well specimen may have ulcerations of the intestines from which the bacilli are constantly distributed.

Eggs for hatching should not be kept longer than two weeks. The fresher they are the better results you will get. Eggs which are kept should be turned daily.

*Editor American Poultry Journal.*

DEAR SIR: I am a new beginner in the business and thought of getting Leghorns for layers but hardly know what kind for market. I was thinking of either Buff Cochins or Plymouth Rocks. Are they all right? The ground where I intend to build my houses and runs is on a sand ridge and my idea was to put the houses on the ridge so they would always be dry and lay out the runs down the side onto the level ground, which is a black loam. Would that be all right? *F. C. H., Unionville, Mich.*

There is nothing the matter with the Cochin as a market fowl but as a matter of fact the people engaged in rearing poultry for market seem to favor one or more of the several varieties of Plymouth Rocks and Wyandottes.

# Classified Ads.

Under this heading ads will be inserted for three cents per word each month. Numbers and initials count as words. All ads will be classified under their proper headings, thus enabling the buyer to readily find the breed he wishes to purchase. No ad accepted for less than 50c per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. **Thirty thousand per month.** We guarantee an average monthly circulation of 30,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of classified ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

***On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.***

***All Copy for Classified Ads Must Reach us by the 19th of the month.***

Also a breeder of up-to-date Pedigreed Belgian Hares for 14 years.
Eggs for hatching, $3.00 per 15; $5.00 per 30 of Rocks and White Wyandottes. No Turkey eggs for sale.

D. J. KOHLI, Lock Box 588, Bluffton, Ohio.

**JUST THINK OF IT!**

For the balance of the season we are going to offer, honestly and truly, the one grand chance of a lifetime to get the very choicest and best line-bred prize stock and eggs. So just for your own sake we urge you not to let this chance slip. We have 40 choice select breeding pens, and from these pens we are going to select and mate up only two pens each of our specialties, which will contain the very cream of all our most noted prize birds, scoring from 94 to 96 points, from which we will furnish eggs at $3, or two sittings for $5. All other choice breeders we are going to close out, to make room, at from $2 to $3. Brother, you may hunt the world over, but never again will you find such a bargain in Barred Rocks, Silver Wyandottes, I. Games, Buff Cochins, Light Brahmas, Pit Games, Pekin Ducks, Wild and Bronze Turkeys. Don't wait, send now.

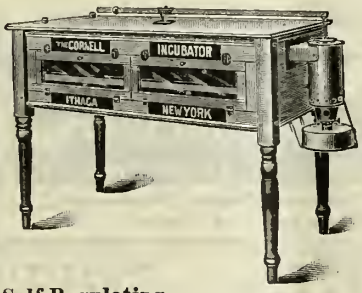
You can do it by sending me your order now for eggs from my prize winners. They are line bred and the eggs will not disappoint you. I have won more prizes during the last four years at the Illinois State, Indiana State and Chicago Shows than any Wyandotte breeder in the country. My birds score as high as 94 by prominent judges. I have a phenomenal English cock bird mated to some elegant open laced pullets, and expect grand results from this mating. Eggs $3 per 15; $5 per 30. Mention A. P. J.

**MRS. GEO. M. HANLEY, Hoopeston, Ill.**

## Cornell Incubators and Brooders



are the latest and most modern inventions for artificial hatching and rearing chickens.

The great superiority of the Cornell Incubators and Brooders is due to the regulation of ventilation and heating.

No fowl air or poisonous gases can accumulate in the egg chamber to poison or destroy the germ as in the case of nearly all other makes.

Our new improved Brooders are also automatically heated and ventilated. You can keep the heat at a constant temperature, with no cold corners nor hot spots in which the chicks will crowd.

Send for free descriptive catalogue. If the machines do not please you send them back, We will refund the money.

**Buy the Cornell and Get the Best Hot-Air Incubator & Brooder ever put on the market.**

**The Sure-Hatch Hatches Sure.**

## THE Sure-Hatch

has proven its right and title to the name by actual operation in the hands of thousands of poultry raisers everywhere. They have given such perfect satisfaction in the past that we have decided to

## Send Them On Trial,

beginning May 1, 1901. This plan will give the purchaser the opportunity to try the **Sure-Hatch** at home and know what he can do with it. **No "pig in the poke" business here.** Remember that summer hatched chicks make fine broilers and "spring chickens" in the fall, when the demand is always good. The machines and the prices are both right. Write for prices, plans, conditions, etc.

**SURE-HATCH INCUBATOR COMPANY, CLAY CENTER, NEB.**

## DAVIDSON'S LIGHT BRAHMAS

Win For Him, Will Win For You.

First prizes at Mason City and Sheldon, Iowa. New circular tells all about them, free if you mention A. P. J. Eggs, breeders and exhibition birds for sale.

U. GRANT DAVIDSON, Manson, Iowa.

## Buff Cochins, Black Langshans.

Winners at Milwaukee Show, Jan., 1901. Langshans—1st hen, 1st and 3d pullet, 2d cock and 1st pen. Buff Cochins—1st, 2d and 3d pullets. Eggs for sale from special matings which will produce show birds. Write me before placing your order.

W. M. STEWART, 1118 Hayes ave., Layton Park, Wis.

## S. C. BLACK MINORCAS.

Winners at Cleveland and Chicago. Won at Cleveland, January, 1901, cocks 1st and 2d, hen 3d, cockerels 2d, 4th and 5th, pen 1st. Won at Chicago, January, 1901, cock 2d, cockerel 1st and 2d, pullets 1st and 2d, hens 1st and 3d, pen 1st. Eleven years a breeder. Eggs in season. Stock for sale.

W. J. BOYD, Glenville, Ohio.

## Barred Buff Rocks.

At Boston, 1901, our Barred Rocks won, 1st hen, 4th cock, 6th pullet, and our Buffs won 1st cockerel, 2d and 4th pullet. Eggs $3 per 13; $5 per 30. 40 Buff Rock hens for sale.

For Barred address, F. A. QUIMBY, East Rochester, N. H.

For Buff address W. E. BLAISDELL, East Rochester, N. H.

## Winners!

**Buff P. Rocks.** Eggs after June at one-half price, $1 per 13; $2 per 30; $2.50 per 39.

WM. H. ABBOTT, Reading, Mich,

Battle Creek, Detroit, etc.

## Langshan Winners.

First cock, cockerel, hen, pullet and pen and 2d and 3d cockerel and pullet at Springfield. Have some extra good cockerels and 1 cock left; also a few pullets. Egg orders hooked and prompt shipment made.

DAVID O. H. SOHRAMM, Springfield, Ohio.

## Barred, White and Buff Rocks,

Buff and White Wyandottes, Pekin Ducks.

We have the birds and can start you right or supply you with new blood. We guarantee everything we sell and our prices are reasonable. Stock raised on three farms. Eggs $1.50 per sitting. Prompt shipment. We are closing out some extra fine Light Brahmas. Write for prices and circular.

CLOVER MEADOW POULTRY FARM,
J. K. AUSTIN, Prop., Onargo, Ill.

## We Never Like to Brag---But!

The fact that our birds are better than other birds doesn't amount to much unless you get some of them and derive the benefit. These are our specialties: Brahmas—Light and Dark; Cochins—Buff, Black, White and Partridge; Wyandottes—Silver, Golden and White. Eggs $2 per 15.

JAS. A. TUCKER, Concord, Mich.

## "PEEP 'O DAY."

**The Most Successful Brooder in America to-day.**

Any well posted poultryman will advise you to use these brooders, and you will never be satisfied until you do. We make the most complete line of Portable Poultry Houses and Coops in the United States. They are light, warm and handsome in appearance. We refer you to the Editor of this paper in regard to any of our specialties. Our illustrated catalogue is free.

Peep-o'-Day Brooder.

Portable Poultry House.

E. F. HODGSON, Box 16, Dover, Mass.

## RIDER AGENTS WANTED

one in each town to ride and exhibit a sample 1901 model bicycle of our manufacture. YOU CAN MAKE $10 TO $50 A WEEK besides having a wheel to ride for yourself.

**1901 Models** High Grade Guaranteed **$10 to $18**

**'00 & '99 Models** Best Makes **$7 to $12**

**500 Second Hand Wheels** taken in trade by our Chicago retail stores, many good as new.... **$3 to $8**

We ship any bicycle ON APPROVAL to anyone *without a cent deposit in advance* and allow

**10 DAYS FREE TRIAL.** You take absolutely *no risk* in ordering from us, as you do not need to pay a cent if the bicycle does not suit you.

**DO NOT BUY** a wheel until you have written for our FACTORY PRICES and FREE TRIAL OFFER. This liberal offer has never been equaled and is a guarantee of the quality of our wheels.

WE WANT a reliable person in each town to distribute catalogues for us in exchange for a bicycle. Write today for free catalogue and our special offer.

LIGHT BRAHMAS.

"This sketch is not ideal in every sense of the word, however, but it fits well our idea of the Brahma, both as to male and female. * * * We believe this to be nearer a correct outline for Brahmas than the one presented in the June number."—*Theo. Hewes in descriptive article herewith.*

# Theo. Hewes' Ideas.

## Answer to Mr. McGrew and Further Comment upon Mr. Hewes' Criticism of Awards at the Boston Show---What Style of Brahma do Breeders Want.

*Editor American Poultry Journal:*

In the June number of the AMERICAN POULTRY JOURNAL appears a well written article by Mr. T. F. McGrew, on Light Brahmas. Mr. McGrew has undoubtedly given the readers of the AMERICAN POULTRY JOURNAL one of the best articles that he has ever written, but why he should have mixed the writer up in it or call attention to him is more than I can understand. I have no desire nor intention to detract in any way from Mr. McGrew's article, but I think it is no more than right to call attention to a few things and set the readers right in regard to myself.

Our criticisms of the awards at Boston were made solely for the interest of the breed that the writer himself is directly interested in. We have no fault to find with the exhibitor or the judge. Private opinions vary and we do not all see alike, but I do know positively that the male bird in question that won first, was not the choice of several of those mentioned in Mr. McGrew's article. Further than that I will wager my last dollar that had Mr. McGrew been passing on the class that there would have been a change.

Mr. McGrew says that "if it were possible to compromise all these separate opinions, no doubt the greatest good would be the result, and there is no use to dispute the fact that New England is the home of the Brahma and as New England wills, so the future of the Brahma must be; as New England molds the winner, others will follow." If New England was a unit in the selection of males and females, and gave to the world this bird as a type, this would no doubt be correct. There is no east or west in the poultry business; at least there should not be, and we have no desire to criticize the breeders in one section of the country to their detriment and help some one else in another section of the country. Our only aim and object is to harmonize and help each section of the country to understand alike, but I will state frankly to Mr. McGrew that we do not believe any of the prominent Light Brahma breeders of New England would be very anxious for the writer to advise the readers of the AMERICAN POULTRY JOURNAL, or any other prominent paper to let New England Light Brahmas alone until they get them where they belong. Think it over for a minute. This is your selling ground. We are the buyers, and the man that puts up the money has certainly a right to say what he shall buy with that money.

If the type of bird that won at Boston is the type that is wanted in New England, it is a question whether our money would go east or not, and we will say emphatically that it is not the type that is wanted there—there were birds exhibited at this show which show conclusively that the type of Brahma that you have taught us to believe was correct, and the one that we are trying to breed ourselves in the west, is still prominent in New England, and the best breeders in that part of the country are their advocates.

We want daylight under our Brahmas. We do not want Cochin feathering on their feet and legs, and we do not want short backs, nor do we want a hackle for a saddle. Those are things that we do not want in the west, and the New England Light Brahma breeder will do well to consider before they try to push them on us. While we do not understand that the birds illustrated in the June number of the AMERICAN POULTRY JOURNAL are Mr. McGrew's ideals, at the same time there are no short backs shown there, and the hen shows a type of back that is prominent in New England and in the west, and from just such backs we may expect to maintain the Standard as we have been taught to believe it meant.

Mr. McGrew calls attention to the fact that if the Standard is wrong that the writer is at fault, as he was one of the committee that framed the present Standard. We will plead guilty to the charge of being one of the committee, but we are going to ask Mr. McGrew to remember a little conversation held in the halls of the hotel on Fisher's Island, after the adjournment of the sub-committee and before going into the general committee room. Jog your memory and I believe you will remember this conversation. The writer met you in the hall, and said: "Tom, you fellows have been mighty good to us. You have conceded to Pierce and myself many important points and in many instances we believe against your own judgment. It is only fair that we return the compliment. There are some things in connection with the Brahma Standard that Mr. Pierce and myself don't like, but we are willing to concede that much from the fact that we have been treated so fairly by the eastern members of this committee."

Then again. Mr. McGrew is as much at fault as the writer for the description of the back, because at the meeting in Boston no changes were made, when it was clearly evident that they should have been made. The description of back today is not correct. At the same time, that is no excuse for a judge to award a prize to a bird, contrary to the teachings of Brahma breeders for years. If there is no law to say it is this way or that way, then the correct and proper thing to do is to use your own judgment and take some past precedent as your guide.

We have no desire to cry out against the judge. This is not an article for individuals. We are simply talking for the benefit of the breed, and when the judge makes mistakes of this kind, and the people are taught that it is right, then it is perfectly proper and correct that some one should call attention to the fact.

Mr. McGrew undoubtedly agrees with the writer in regard to the length of back, and we will quote from his own letter: "But above all, we should think the Brahma deserving of a description for back that would give length, breadth and full description of the entire back." That is just exactly what it should do, brother. We will agree with you to the letter. The Brahma backs should be broad at the shoulders on both male and female, with a gentle rise to the tail. Back not too long, at the same time carrying a length that is characteristic of the type of bird that it represents. Not the same shape of the Java, that is almost on a water line, but a gentle rise without the heavy cushion, as it would be termed in poultry parlance.

Then again Mr. McGrew agrees with the writer in regard to the color of the back of the males, and the heavy feathering on hock. We will quote again from his article: "If this encroachment of black in back is to be encouraged, there will be no limit to it, and it is due to the whole fancy that this and extended hock feathering be discontinued on our Light Brahmas, and that we have the clear surface color of back and body and the well rounded hock that belongs to them." Those are just exactly the points that I was trying to make in my write-up of the Boston Show. Mr. McGrew makes them even plainer than myself. Get away from the Cochin idea of feathers. Get away from the black in the back. Don't let high-tailed, short-backed, low-breasted male birds win in Boston. You don't want it there. We don't want it here. Those clean, white-surface colored birds, with correct shading in color in neck, wings and tail, are the beauty of the breed, and when we despoil them because it is easier to breed some other way, we only show our weakness and the writer who fails to criticise those things when he sees them in a show is too cowardly to express his opinion.

We have no desire to criticise any individual. Our only aim and object in this article or any other article, is to make the business better and to make every fancy breed more prominent and give preferenee to those who have devoted time and attention and are entitled to consideration, rather than the one that is careless and produces something that is easy to produce.

We present this month a sketch drawn by Mr. L. B. Richardson, which fairly well represents the Light Brahmas that are winning in the west. This sketch is not ideal in every sense of the word, however, but it fits well our idea of the Brahma, both as to male and female, and shows an active, wide awake specimen, just as our up-to-date Brahma breeder is accustomed to seeing on visiting his own yards. We believe this to be nearer a correct outline for Brahmas, than the one presented in the June number, and we should certainly give this type of male preference over the short back, heavy feathered type of birds, that we saw fit to criticise in our write-up of the Boston show.

---

As the thermometer goes up the enthusiasm of some poultrymen goes down. These are not the successful kind and it is well to bear this in mind. The winniug birds at the shows next winter will be the ones which are properly pushed during the hot summer months.

---

Don't despise the late hatched chick. Many January prize winners are hatched in June.

# The Mediterranean Breeds.

## Comments upon Origin, Standard Description, Etc.

By T. F. McGrew, New York City.

THIS extended family embraces within its limits the great egg producing breeds, naturally non-setting, they may be called laying hens. No variety has expanded its habitation equal to the Leghorn. From Cape Town to Dawson City they will be found in their several colors as may please the fancy of those who possess them. The name Leghorn in every mind is coupled with a large production of beautiful white eggs.

We read a short time since the claim that the Brown Leghorn was the first Leghorn of America. The writer seemed to be of the opinion that the Brown came long before the Whites. The records, as we have them, credits Mr. Simpson of New York as the first to have had the Whites that came direct in a ship to the port of NewYork. These came in 1853, the same year Mr. Kinney of Massachusetts got some Brown Leghorns in Boston that had just come direct from Leghorn. While the records show they came to this country the same year, we do not think the Browns came into public notice till about 1870. A story is told that they came into public notice from having laid over 300 eggs in one year—quite a fairy tale.

The early White Leghorns had white shanks. The first mention we find of Brown Leghorns states the fact that the Browns are most valued on account of their rich yellow skin. The early Browns had a tendency to solid red ear lobes, and we remember that in early days we took part in a long drawn out controversy as to whether they should have white ear lobes or red. It was not till well into the seventies that either the Whites or Browns began to be bred into what might be called good Standard form. We often hear it said that Leghorns of twenty-five years ago were better than now; those who mention this scarcely remember or else the love of early days has biased their judgment.

The early day Leghorns had rough or corrugated ear lobes that were thick and beefy, not white in color, but corn color, mixed with red, many of them drawn up into a bunch rather than smooth against the face. I will quote my own words of 1883: "Hundreds of our very best specimens of Brown Leghorns must be killed for want of pure white ear lobes,"—at the same time we wrote that their size was very much against them as a table fowl. This statement reminds one of the indifferent quality of our Leghorns only twenty years ago. We are quite apt for love of early days, to try to lead ourselves into believing we had the best, while the facts are that with each few years comes a new lot of fanciers who always outrun the old.

### Size, Comb and Lobe.

We have before us an article that we published about twenty years ago in which we stated that the size of the Leghorn was a drawback both in egg yield, size of eggs laid and to their value as market poultry. In the same is stated that by selecting for size only, we had gained much in this direction, but lost color of ear lobe. A gentleman from Connecticut answered at that time, that any increase in size would reduce egg yield. Time has proven that the much larger Minorca and Andalusian of the same family can produce as many in number and almost double in weight per year.

Size of body has been increased, size of comb considerably decreased, ear lobe greatly improved and with these has come Leghorns that lay more eggs than ever before and of better size. These facts have changed the opinions of many, and while we will often find judge and breeder of the early school who cling with honest pride to the old type, they are so few and of so little importance among the vast army of progressive fanciers as to call for pity at their hands. When we see the small, slender, little three-pound Leghorn hen we at once make up our mind that the owner must have gained his knowledge at the shrine of by-gone days in place of following in the footsteps of progression.

BUFF LEGHORN COCK.

Winner of first as cock at Chicago, 1901, and first as cockerel at Chicago, 1900. Bred and exhibited by B. F. Hislop, Milford, Ill.

### The Leghorn Hen.

What does the Standard say of her proportions? Will it uphold the thin, undeveloped like creature without size or vigor, with breast that should be round and full, body of medium length, deep and plump, fluff, rather short and more developed than in the male? This calls for full, round breast and the well developed abdomen, the formation needed for the continued egg yield. The increased egg yield has come from constant care in selecting and keeping only such hens as give paying returns for their keep. It is not the little bantam like Leghorn hen that lays the fine size white egg in goodly numbers; it is the strong, well developed, vigorous hens that have made the reputation for the breed. Such are the mothers of the most desirable type of Leghorns.

The Leghorn for the breeding pen, show pen, or for utility purposes, should be the same type or build; the narrow, close built specimen, with upright carriage is not proper, she should be built for egg business at every point. No hen can be a valuable egg machine that has not body and abdomen development for her trade. It is not possible for her to consume and dispose of sufficient food to keep her going and to form three to four eggs per week, unless she has the room within her body for the vast amount of work that is necessary for their construction.

### The Standard Varieties.

Our Standard contains twelve varieties grouped under five heads; the whole of these are classed as Mediterranean fowls. Of all these the White and Brown Leghorns have the position of honor and are fully as well known as the American breeds, and not much better understood. But few people give the attention to head points, and the marked difference in the several breeds. The combs of the Leghorns are small as compared with the Minorca. While this is the rule we often see Leghorns with comb of the Minorca

type. The comb of the female Leghorn should lay over to one side, the front standing erect, including the first spike. This is not the rule with the Minorca. The comb of the Leghorn male *should not* follow the shape of the head or neck in the rear; it should run straight back, not inclining up; the neck curving away from the comb makes the space between the heel of the comb and the neck.

The entire Leghorn family, including the Anconas, have the same form of head, head points and body. The Andalusian differs slightly from them, and the Minorca considerably. The comb of the Minorca male is large and follows the shape of the neck behind. This is a very marked difference that all can remember. The most marked difference is in the Black Spanish—that is the most distinctive of form and make up of almost any fowl we have. Of all the separate varieties we shall make mention as they are recorded in the Standard.

THE BROWN LEGHORN.

These we have in single and Rose Comb varieties. The Rose Comb to be proper and right should be as handsomely formed and finished as is the comb of the Hamburg. The coarse comb, that was embellished with the rich salmon breast, gives us Brown Leghorns of grace and beauty that all must admire. The slight grumble from the Chicago meeting of the American Poultry Association as to them should be forgotten, as we contemplate the beauty of the present Brown Leghorn.

THE WHITE LEGHORN.

They also have both single and Rose Comb varieties, and almost every one feels they know all about White Leghorns; if so, well and good, if not, these few pointers will not be amiss. White Leghorns have no value unless they are pure white in color, true Leghorns in shape and fine in head points, the carriage of tail in both male and female should be understood. Too many carry them upright; this is not correct, for the back rises in a short, concave sweep to the tail, which should be carried well up, but *not upright*. Just give your attention to the study of Leghorn shape as recorded in the Standard, also look up the definition of squirrel tail in the Glossary.

The plumage of the White Leghorn causes the yellow tint in ear lobe, if present, to show more plainly than in other breeds. White in face of any Leghorn is bad. While allowable in old birds, we have seen some very fine cock birds without it, and it is possible to produce good ones without it. Good, clear, white ear lobes should be demanded on all, and the line should be drawn very close on white in face of all. As to the size, we like the females to weigh about five pounds or better, and the males six to six and one-half pounds when fully matured. We know many are smaller; in fact, the majority are, but this does not change the fact that all could be fully equal to this weight if proper care was given their culture.

THE BLACK LEGHORN.

This almost neglected variety is quite inferior to all of its kind; the main fault is color of plumage, with shape and color of lobe. If they can be bred to true Leghorn qualities they will be quite attractive. To do this the first step forward would be to change the Standard so as to allow black shanks, which will help in the color of plumage. Next must come better ear lobes and larger size. With these improvements we could have a beautiful variety, but we have but little hope of early improvement in them.

THE BUFF LEGHORN.

This variety has advanced wonderfully within two years, males and females having good size, form, Leghorn qualities and color are frequently seen. More expert labor has been expended on them than has been given to any new breed for some years. True golden buff, with but little shading in tail is an accomplished fact. With some males and a number of females true buff prevails throughout; size and ear lobe can and will be improved, but for all time it will be difficult to have pure white lobes on these buff fowls. The influence of the buff color that extends to shanks and skin must be expected to give considerable trouble in this direction; with this they have trouble to hold the color of shanks that for some unexplained reason have a tendency to turn rather light in color.

SILVER DUCKWING LEGHORNS.

Should the attention of the fancy turn to this variety they must prove quite a popular fowl. The beautiful colors of both made and female are most attractive. The silver white top color of male, the lower hackle striped with black, balance of body plumage and tail black. Female, light gray in color, except neck and breast, which is salmon. Hackle Silver Gray, striped with black. They are marked and colored quite like the Silver Duckwing Game, many of them have good size and form, the combs some larger than other Leghorns, ear lobes good. These, like all English productions, are a finished fowl of merit.

THE ANCONA.

They are a Leghorn clothed in broken black and white plumage, quite like the Houdan, only the mottling is more evenly divided between the two colors. The black must be a rich, glossy black. The white clear and clean. These are very popular in England at present. They were one of the largest classes at the Crystal Palace Show of last year; with us they are but little kept and do not gain in popularity. When of good quality they are beautiful fowls, but when they lack in quality they are not even interesting. They and the Silver Duck-

Partial View of the Plant of H. J. Blanchard, Groton, N. Y. Mr. Blanchard breeds S. C. White Leghorns and has one of the largest plants in the East.

like we see on the Red Cap, is not proper. The comb of the Rose Comb Leghorn of any variety should be beautifully formed, or they are simply "no good," to use a slang phrase, and it is a waste of time and energy to keep and feed such, for they have no value other than market fowls. Many beautiful specimens of the Rose Comb variety are met with; at the same time they might be classed as a fancier's fowl.

The beautiful rich brilliant red of the Brown Leghorn's top color, and the striping of hackle and saddle is so much more beautiful than the former shade, that we doubt very much whether one person could be found that might propose going back to the old fashioned red or orange red. We wish that the whole world of fanciers might have seen the display of Brown Leghorns at New York last winter. One hour's association with the elegance and quality shown would have forever driven from the mind of all the slightest notion of changing back. The smooth, even, soft brown of the female absolutely free from shafting and so evenly sprinkled with the darker shade,

wings are but seldom seen outside of our larger shows.

There is bred in England a Red Pyle Leghorn that is just like the Pyle Game in plumage. Some of them are beautiful.

THE ANDALUSIAN.

This is the largest of what might he called a Leghorn. Is classed by itself as Andalusian. They are bred to two distinct types, the one truly Leghorn, the other Minorca type. With us the Leghorn type is regular as per the Standard. The past winter it was evident that some favored the Minorca type, for some of this type won at our larger shows. The males have a very dark blue top color, balance of male and the entire surface color of female slaty blue, edged with darker shade. The surface color is beautiful when of a light, clear color and nicely edged all about the web on each feather with a darker shade. With these clear, light shades it is usual to have clear, hlue tails, same shade as body plumage.

The great drawback to this hreed is their natural habit of throwing ahout one-half their chicks pure or solid white. This is the rule that can be depended to work out with them, and such results need not surprise any who may keep them. Such colors come naturally from crossing white and black fowls or often from breeding two separate hreeds of black fowls together. Such have been produced in this way, and can he so produced again. They are the same in color and marking as the Jersey hlue. Some of the Minorca type are almost as large as the Minorca, the others are more game or Spanish in type, or form, and not so large.

THE MINORCA.

We feel disposed to place the Minorca next to the Spanish for early day fowls. Columello mentions the fowls having white faces as among the best in his writings of the first century about 46. In very early days they had a White Spanish, but they did not have the white face, only the white ear lobe. These we should class as White Minorcas, rather than White Spanish, for if the Spanish had the white face on the hlacks 2,000 years ago, it is more than likely that the white fowls that were called White Spanish were Minorcas.

Many have the notion that the Minorca is a new breed, hut this is not the fact. They are older than the Leghorn; in fact, the majority of all fowls found in the Spanish countries in early days were black. We feel warranted in saying that our first Leghorns were White Minorcas, and the first Brown Leghorns a mixture of the blacks with games, and that the Minorcas were, with the Black Spanish, the first fowls that came from the Spanish countries to England and America. The combs of the early day Leghorns and their formation and color of shanks would lead one to this conclusion.

At this time the Minorca is having marked attention paid to their culture. Both the Black and White varieties are bred to the highest type; form, color, comb and all head points are much improved to what they were a few years since. We have three varieties of them, the Single Comb Black, the Single Comb White, and the Rose Comb Black; while the last mentioned are not classed within the Standard, they are hred to very good form.

More attention has been given to size of Minorcas in the past few years than formerly; the result will, we fear, tend to their injury if pushed to the extreme, as indicated at the present time. They can only carry so much size, and maintain shape and egg producing qualities. When developed beyond this it may reflect to their own injury and turn the now profitable fowl into an undesirable fowl that may have more size than can be maintained at a profit.

The White Minorca is fully the equal of the Black in every way. They have the size, the shape, and the egg producing qualities to the highest degree, and have the advantage if any of the white plumage. For some reason they have not been pushed to equal prominence with the Blacks, but we believe they will yet hold their own as against them. Minorca eggs are in demand from a certain class of trade, who prefer the large white eggs to any other.

THE BLACK SPANISH.

We should not be surprised if the proofs should turn up giving to the Black Spanish a position of honor among the occupants of the Ark. As stated above, the early records give them a standing in the first century. They have stood the test of almost two thousand years and have always ranked A1, but at this time they are so extremely fancy as to have become almost useless for any domestic purpose. In England they are bred to have legs under them that look like stilts, and so much white about the face as to look unnatural.

The few who hreed them in this country have one by one given them up, till now they are seldom seen outside the Boston show in any considerahle number. Well do we remember the early day Black Spanish, that had the small white face and considerable more of the present Minorca shape than they have now. They were the first non-setting bird we ever knew, and their fine large white eggs were prized like gold. No eggs ever sold so high that we know aught of in early days, except the eggs of some Toulouse geese, a pair of which were brought into our neighhorhood, the eggs from which sold for $1 each, and it was the current report that none of those sold ever produced a goslin.

Whitewash is better than paint for the interior of the poultry house. Be liheral with it and put in a little pulverized glue thoroughly dissolved in warm water.

Scene on the Farm of H. J. Blanchard, Groton, N. Y.

## Humane Treatment of Market Poultry.

We have just at hand a neat circular sent out by the Toledo Humane Society, which, in view of the general necessity of such literature, and the comprehensiveness of the article we feel constrained to puhlish it unchanged:

We give notice to all handlers of poultry that after the first day of June, 1901, this society will fully enforce the law punishing cruelty, against dealers in, shippers and carriers of poultry. There is no cruelty more mercenary, senseless and inexcusahle than is practiced in the neath to be damp with perspiration, and handling of poultry for the market. The crates, as a general thing, are in every way too small. The animals are crowded, cramped and famished, until they are filled with fever germs, and made wholly unfit for use. All this is practiced in the interests of economy of space in shipment; it is wholly mercenary. It is not in the interest of the animals themselves or of the purchasers who want healthful food, and are willing to pay for it.

Crates should he built with solid board bottoms, lattice sides, ends and tops, the slats not heing over one and one-half inches wide.

For turkeys and geese, the inside measurement should be forty-six inches long, twenty-eight inches wide and twenty-two inches high.

For all smaller fowl they should be, inside, forty-six inches long, twenty-six inches wide and sixteen inches high.

And no crate at any time, should have in it over 100 pounds of poultry, large or small.

Water and feed them regularly and keep them out of rain and sun and you will thereby not only treat them as you would like to be treated, hut bring them to the purchaser in the best possible condition.

This society is authorized by law to seize and relieve all suffering animals at the cost and expense of the owner, it proposes to do so.

*The Toledo Humane Society.*

Keep your hen house cool during the hot months hut avoid drafts. Roosting in a draft has sent many a promising youngster to an untimely grave.

# Feed for Brooder Chicks.

By G. C. FLEGEL, Westville, Ind.

IS it necessary to give the chicks the same feed after they leave the brooder that I do while they are occupying it? Is a question I have been asked quite often. This, I think, should not require an answer, but as we do not all think alike, I have always answered "No," and given my reasons for this answer.

While the chicks are confined to the brooders and small runs, it needs no great amount of argument to show that they are unable to secure the diversity of foods necessary to their rapid growth and continued health, and therefore it is positively necessary that they be supplied with these different foods.

On the other hand, when they have been given an extended run, which they should have. and the larger the better, they have the facilities opened to them to secure the food required by nature, and then if they are fed the same foods and in the same manner they were when confined there is sure to be trouble show up some place, and it will be found in the droopy condition of the chicks if it does not result in the loss of them by sickness it will show the effects of bad management in their slow growth and general dilapidated appearance.

There are a few different kinds of grain that are very good if fed judiciously, but give very bad results if not. Millet seed is one. A light feed of millet in litter twice a week will give good results, but if fed too strongly it is the opposite.

Dry oats is another grain that should be handled with care when fed to young chicks. In fact, I should not recommend feeding them at all dry to fowls under four or five months of age. A feed of them when they have been softened by boiling will result favorably if the chicks are not too young. Then there are the different concentrated animal meals on the market. These are all right. In fact, I have had fine results in feeding them, but have found by experience that it is not well to feed on the principle of "if a little is good a great deal is better," because it is not and if fed in too great quantities they are sure to throw the chicks out of balance. Now to go back to the chick in the brooder. They are deprived of the chance to secure the animal food nature requires by reason of being confined to small space. This of necessity must be provided, and in this case the concentrated meal supplies the needed food the same applies in relation to green foods. Even if the chicks are provided with runs attached to the brooders it takes but a short time for them to consume everything green that is in reach, and it is highly necessary it should also be supplied in one form or another. But after they have become of the age and size when they may be given large runs, where they will be enabled to supply the requirements of nature in this line themselves, then to feed them these concentrated meals and green foods are simply overdoing the thing. They are not only unnecessary but in reality work an injury. It is not so bad with the green stuff, as they will leave that lay untouched if they do not desire or have no appetite for it.

It is different, however, with the meal. It is mixed in their mash and they take into their systems in connection with the other foods composing the mash.

Personally I do not think a great deal of *mash* as a feed. Nature provided all fowls with means of creating a mash of everything eaten, and it is a fact that the hen that hatches her brood from a hidden nest will, under equal conditions, rear as fine a flock as the one will that has a mash fed her and her chicks. I firmly believe that the habit of feeding soft mashes to the young chicks and continuing on through the chick's natural life has a tendency to weaken the digestive organs of that fowl and that the same weakness will be contributed through the weakened father and mother to the young and that this is one of the prime causes for complaint in regard to unhealthy stock. I am well aware there may be many who may take exceptions to the above statement, yet I have not seen a good reason given that to my mind was a conclusive statement showing the fallacy of my theory.

### BROODER CHICKS IN JULY.

As they have been raised by artificial means they will still be on the watch for those who have had the care of them in the past, and, for this reason, if no other, they should be cared for as regularly at this time as at any other.

It is the care they receive from the time they leave the brooder that is the prime factor in the making or unmaking of the strong, healthy, fine looking fowl at maturity. A little neglect now will undo all that has been done during the days the chicks spent in the brooder.

There are more poor chicks made between the ages of two and four months than at any other period of their existence.

The question "Why is this?" may be asked. The answer is not hard to find. In the first place it is so much easier to care for the chicks when they are in the brooder than after they leave it. There is to a certain extent a fascination in seeing them grow and in using every effort to prevent sickness while they are kept housed up, but after they have been turned out many, in fact the majority of poultry raisers seem to look at the matter as though the chicks had been gotten off their hands and that they are able to look out for themselves.

There was never a greater mistake. Of course they are to an extent able to get out and hustle, scratch and hunt a part of their living, but they can not find it all by any means and especially if the surroundings are not ideal for this purpose.

It is therefore as positively necessary that they should be as regularly fed and looked after now as before and care should also be taken that they are given such feeds as will produce and promote rapid growth. The exercise they secure by running at large in a good-sized run will give them both muscle and vigor if the proper housings are had for them at night.

If they are given "any old kind" of coops and permitted to run together in unlimited numbers, it is not to be expected that they will develop into fine, large, thrifty stock. They will, if not kept in small flocks crowd as badly as they would when in the brooder if it became cold.

The crowding will not be limited to cool nights only, but if the breeder will go among his flock on warm nights after the chicks have gone into their shelter coops, he will find them as badly crowded as it is possible to be. They will be literally piled one on top of another and if he will take the trouble to in many cases with the droppings of the other chicks.

It is hard to foretell the ultimate result, it means colds and in all probability roup, and in connection with the filth, lice and concomitant evils.

This can all be avoided if only a little care be given to the housing and number of chicks that are put together. Therefore it is as essential that they be kept in small number when put out of the brooder as it is while they are occupying it.

Their shelter coops should be roomy and well ventilated and at the same time free from draughts and safe from the depredations of animals. By placing a rack over the bottom of the shelter coops the chicks will not crowd nor will they be compelled to roost in their own filth.

It might be truthfully said there are a thousand and one things that will be necessary to see to in the proper care of the chicks after leaving the brooder, and it should not be necessary to have our attention called to them in order that they may be looked after, as our own sense of what is required and our every day association with the chicks should show us what should be done each day. One thing that should be strictly adhered to is to be prompt in detecting what should be done and equally as prompt in giving it the required attention. By this early attention, are early maturing, healthy and beautiful stock secured.

---

Many a brood of promising chicks are drowned by being caught in a drenching rain with no protection to which they can go. The loss from this cause each season is very great and many of us do not profit by experience and provide proper shelter for the youngsters. It is true that at times they show an astonishing lack of the instinct of self preservation by refusing to seek shelter when it is provided close at hand, but this fact should serve to impress upon us the importance of greater vigilance in preventing loss of this kind.

---

Young chicks should not be allowed to roost too early. Let them seek the roost of their own accord. Care should be taken, however, to prevent crowding in pens or brood coops. They will persist in piling on top of each other and the under ones suffer accordingly. The debilitating perspiration resulting in cases of this kind seems to take the life right out of them and weakens them to such an extent as to stunt them beyond the point of recovery.

---

There are some of the most beautiful and seemingly conclusive theories advanced in the poultry business that were ever sprung upon the untutored in any line of endeavor. Don't accept as truth all the advice offered.

# Success With Turkeys.

*By S. B. Johnston, Boggstown, Ind.*

July is one of the most important months of the year for the breeder of Turkeys as well as poultrymen generally. The turkeys now begin to molt and the very hot days that generally come in this month make it a very busy time for the breeder to keep his stock healthy and to get them through the molt in the shortest possible time. The premises must also be kept clean and free from lice. The drinking water must be changed several times a day to have it fresh, and when turkeys are kept in a small run of an acre or two they must have closer attention than when they have free range. The young do not grow so fast at this season, and it is very important to have them growing right along. Young poults at this time of the year are very often crop-bound. I have opened several crops with a sharp knife and found them full of grass, weeds, stones and grain, and sometimes have taken as much as one-half gallon of stuff from a young bird that only weighed four or five pounds. I have had the birds in one of my yards affected in this way several times and am inclined to believe there is something in the way the attendant manages them. I have never found an entirely satisfactory remedy for this trouble, that is, after they have once become badly affected. Relief may be obtained by giving them a dose of oil and then gently kneading their crop between your thumb and finger, but if not watched carefully, the birds will again become affected by over-eating or drinking too much water. This breaks them down again and I have seen the crop almost drag the ground. As a general thing they do not amount to much, even if you manage to pull them through and make them live. If any of the AMERICAN POULTRY JOURNAL readers have a cure for this trouble, I, in common with many others, will be very grateful, if they will divulge it in these columns. I am not infallible nor do I claim to know it all. I am working for the good of the turkey interests of the country. I am at the service of my fellow breeders and am always pleased to disseminate what information I can from what I have learned from several years of experience. I feel that we should all take this view of the matter and trust that others will see it in the same light. Through some unaccountable error my article last month contained two or three mistakes, and they are such that they should not pass uncorrected. In regard to my statement that I would not advise breeding from a forty-pound young tom, will say that this should be modified by putting in the clause, "until they were reduced in flesh a little," and then I should use them with old hens of medium size that have plenty of vigor. The bird should also be of good color and shape, well proportioned and active. It is vigor, symmetry and bone that we want and that was the idea which I intended to convey. I use these large birds in my own yards when I get them up to my ideal.

The number of eggs set by the gentleman from Georgia was fifty, instead of fifteen. The other error was in the time, which I have kept eggs for hatching. This should have read "three or four weeks" instead of "three of four months." I have a letter from a lady ot Rockville, Ind., who asks some of the same questions that come up year after year. She wishes to know what to do with the long feathers on the wings of the young poults. She states that they are not lousy, but when their wing feathers begin to grow fast the birds begin to droop and die. She feeds them cheese, hard bolied eggs chopped fine with bread, well cooked corn bread, fresh milk, wood ashes and green stuff, and they eat heartily. They are not apparently afflicted with any disease, but yet they die. Now, I was always taught to have the greatest respect for a lady and hope she will not be offended if I should tell her that her turkeys are affected with lice, and this is the case nine cases out of ten where there is apparently no sign of disease. Turkeys are very tender when young and when they do not have free range one must watch daily for these pests. The lice will hide between the quill feathers of the wings and if you do not watch them very carefully, they will get the best of the turkey before you know it. If my birds happen to get in this plight, I clip their wings or the quill feathers and this stunts their growth until the poult gets a fresh start after you have cleared them of lice and it is a daily warfare at this time of the year. She also states that the hen is in a large pen and the poults have free range. She wishes to know when to give the hen her liberty. If the hen does not have so many poults as to be in danger of their being drowned in case she should wander away and be caught in a rain storm and be unable to hover all of them, it would be better to allow her free range now, if she was looked after at night, so as to prevent her from roosting away from the houses and be caught by vermin. Young poults with their mother at free range generally take care of themselves all right after their backs are covered with feathers to protect them from the rain. I am now very busy preparing my new place near the little village for my future home and poultry ranch. I do most all of my correspondence myself and am making preparations to show a good string at the Pan-American Exposition. With these and other duties it is impossible for me to write personal letters in answer to all the questions asked by letter, but I endeavor to answer them all in this department of the AMERICAN POULTRY JOURNAL and I hope none of my correspondents will censure me for not writing them personally. As I said before, it is just simply impossible as I am now working from early morn until late at night and oftentimes most of the night.

CHARLES L. BLANTON,
Secretary-Treasurer American Black Minorca Club, Falls Church, Va.

Your best mating this season has produced some rank culls and this is another evidence that "like does not always produce like."

# BEAVER HILL FARM SERMONS

By T. E. ORR, Beaver, Pa.

[The following communication from Mr. T. E. Orr should, in connection with succeeding ones, prove of great value to a large majority of breeders and to all persons who contemplate engaging in the business. The suggestions offered and the results given are based upon actual experience and not theory. Mr. Orr has been successful in building up a lucrative and prominent business, and is therefore competent to give advice. He has been prominently identified with live stock interests for years and is now secretary and advertising manager of *The National Stockman and Farmer*, Pittsburg, Pa. We commend his remarks to the careful attention and consideration of our readers.—EDITOR.]

*Editor American Poultry Journal:*

WHILE I have felt flattered by your invitations to write of my observations and experiences for the perusal of your readers, you doubtless know that one who is at work fifty-two weeks in the year on his own paper finds it rather irksome to enlarge that work and write for another man's paper, and unless he can make that writing a sort of recreation he is hardly likely to do so. But do you know that this matter of recreation cuts a wide swatb in the field of poultry fanciers? Many a man would not be in tbe poultry business were it not for the diversion it gives him in thus turning aside from his business cares for pleasure and relaxation among his feathered pets. I am sure this is true in my case, and if you and your readers care to have me do so I am disposed to preach to them through your columns an occasional short sermon.

Well, a preacher must have a text, and while I shall doubtless wander from the subpect frequently, still I desire to state in tbe outset, and I hope to refer to it occasionally, tbis theme, namely: *The Advantages a Farmer Fancier Has Over a Fancier Who is Not a Farmer.*

When we took possession of Beaver Hill Farm it looked as little like a poultry farm, present or prospective, as it is possible to imagine. A fairly good frame house of seven rooms, a frame bank barn 20x56 and a dirty chicken shed, 12x30. These were the buildings. A good paling fence was along the highway in front of the house; aside from this there were not five rods of fence on the place fit for anything but kindling wood. We at once made kindling wood, indeed, of a good many pieces of fence, for the mercury was near zero that 24tb day of February when Mr. Hartman (the man who was to take it in charge) and I drove out tbere from Beaver with his trunk, some provisions, some bedding and a little furniture. The house had been vacant for four months and it seemed colder inside than outside.

Mr. Hartman came from eastern Pennsylvania and was to "batch it" for a month or two until his family and fixings should arrive. Tbe outlook was cheerless enough and I did not stay long with him on that cold Saturday. He was warned that his stock of Wyandottes would begin to arrive the next week, and that be must hustle up places to keep them in comfort. He did. Within a week a white cock of the Knapp strain and ten of Carnahan's big white hens were established in the old poultry house; while under the barn, dry and comfortable, were located a Silver cock and ten females of our own old strain bred in line since 1883 without a single out cross. Not long after the chicken stock was doubled both in Whites and Silvers, and that, too, without going out of the lines of breeding indicated in describing the first two pens.

Thus we were launched in the chicken business. But my reader will say: "You haven't touched your text." I'm just getting ready. Here goes.

I was only a proxy farmer. I was in business in Pittsburg, thirty miles from the farm, and could only expect to see tbe chickens once or twice a week. The real farmer, if he takes kindly to fancy stock, can see his birds morning, noon and night. He can tell whether they are thriving or suffering, can cultivate an intimate personal acquaintance with each bird. This last may seem foolish, but it counts for much. When I began breeding Silver Wyandottes back in 1881—then they were called American Seabrights, Hambrights and a half dozen other names—I had a name for each of my four pullets and the cockerel Ben Butler was known by that name for several years by myself and others. It pays to know your birds individually, and I noticed that Mr. Hartman soon had a name or designation for each chicken on the place.

The real farmer is not compelled to pay the highest cash price for everything his birds consume. He has many odds and ends—the chaff pile, the siftings from tbe hay-mow, the screenings, the meat scraps from butchering, that help him out. We found Beaver Hill Farm bare of all these things, not even a bundle of straw—everything to be bought at highest retail price. By August 31st, just six months after starting, our cash book sbowed that we had paid out $99.22 for feed. A part of this feed, however, was for the Holstein cow that we bougbt soon after starting, for we are a firm believer in the theory that milk is a good thing for both children and chickens, and now that we have added Collie dogs to our stock and are raising many puppies, we have purchased another Holstein cow; but we charge all provender for cows to the general item of feed. We also charge to this same item seeds purchased for sowing or planting. So of our six items for charges feed is always first, the other five being labor, stock, implements, improvements and publicity.

The second item of expense—labor—is another point in which the real farmer has the advantage over the proxy farmer or the fancier who must give his attention to other lines of business. As we paid Mr. Hartman $1 per day, "Sunday and Monday," our labor item for the first six months is easily computed at $188. On the regular farm much more might have been realized out of this labor, or it migbt have been managed more economically, but the proxy farmer must do just as he can, not as he would. However, I am not one who believes in regulating labor exactly by the hours. There were times when Mr. Hartman could not work if he wanted to. Then tbere were times when he had to work away into the night whether he wanted to or not. Incubators and brooders sometimes required night work, lots of it, and although there came whispers from passers-by tbat he was a time-killer, I always believe a poultryman's work should be judged by the results, and the man who can start with nothing and raise a good flock of healthy chickens deserves credit for it even if it does "look like play." But, as I have said, the real and right-there, every-day farmer has many advantages, both on feed and labor, over the fancier who is absent.

Our next item of expense is stock, but we prefer to defer the details of our "stock transactions" for a later article. Suffice it to say, that having a man to pay for his entire time, and desiring to "stock up" as soon as possible, I was a little extravagant in starting, for which I have now no regrets. We bought two pens of our old stock of Silvers from a man who knew their value. We bought Whites from a man who was never called cheap, and then we bought a few Partridge Wyandottes from the western originators and their immediate followers; and tbose who have tried to do this know tbat it cuts into money pretty fast. We also bought some White and Partridge Wyandotte eggs to hatch in our incubators. So we find by reference to our cash book that by August 31st we had paid out for "stock" the snug sum of $460.16. Our circumstances, of course, were exceptional, but in this, too, the farmer fancier would have the obvious advantage, for be can stock up gradually.

To the item improvements we charge all buildings, fences, shade trees and everything of a permanent character. Fences were our heaviest expense at first. We used the 60-inch Page Poultry Fence for our main lines. The Pittsburg Woven Wire Fence, same height, for line fences, and the DeKalb Fence for partitions. As much of our fencing was not done until fall, we find only $100.21 charged to improvements the first six months.

Implements cut quite a figure in getting started. We purchased no farming implements, as we had our crops put in "on the shares," but with the small tools needed and our incubators and brooders—four of the former and seven of tbe latter—togetber with oil for running tbem, we find "implements" for the first six months amounted to $228.26.

Now, Mr. Editor, this is a little outline of the way we started. You may not care to publish it, but if you do I shall take it for granted that you wish something more and shall proceed to tell your readers some of our successes and failures the first six months, also of our expenses and receipts later, for after a while we did begin to have some receipts.

Don't forget our text: *The Farmer Who is a Fancier Has an Advantage Over the Fancier who is Not a Farmer.*

---

The longer you make the breeding of poultry an intelligent study the more you will realize how little you knew at a time in your early experience when you thought you knew about all there was to learn. The fellow who ridicules "fooling away time with chickens" is related to the man who sits around the stove at the grocery and tells his listeners how to run the country and settle the great economic questions of the day. The "fool killer" still has plenty of work to do.

---

Shows are the round-up of the poultryman's flocks. A prize won at a winter show is a badge of excellence.

# Mr. Wooden's Resolution.

## He Defends it, and Upon Behalf of the Committee Asks for the Suggestions of all Breeders Regarding the plan.

THE writer feels that in constantly rushing into print in his effort to draw out the breeders and fanciers of the country upon the subject suggested by his resolution at the last meeting of the A. P. A. he may be somewhat presumptuous, but as the committee must present something that is practically a consensus of opinion to warrant or assure its approval, he is inclined to think that the ends justify the means.

Then, also, the principle that "fools rush in where angels fear to tread" may account for much of the inclination. It was hoped that some suggestions might be offered that would be of assistance to the committee.

*Farm Poultry* in its issue of June 1 has a long editorial upon the subject, and though the writer naturally expected that our friend Robinson was optimistic enough to aid in upbuilding, it is with regret that he is found resorting wholly to fault finding, and evincing a disposition to *jab* the A. P. A. over the writer's shoulders. Mr. Robinson occupies two and one-half columns of his paper to tell us two things. First, that the writer should have prepared a scheme or plan which to him seemed competent to meet the conditions before introducing his resolution.

I am exceedingly surprised at this statement on Mr. Robinson's part, and can assure him that had such been the case, instead of introducing the *resolution* I should have introduced the *plan*. Realizing the incompetency of one mind to evolve a complete scheme or plan as suggested, the writer aimed only to bring the matter before the association in such shape that it could be properly referred to a committee authorized to give it consideration and whose duty it was intended should be to first consider the feasibility and practicability of the idea and if deemed advisable to work it up into definite shape for the consideration of the association. That committee is appointed, and would much prefer to receive suggestions prompted by the resolution rather than digs and jabs at the American Poultry Association which seem to comprise the only other point imparted by the editorial in question.

The life-membership "stumbling block" may have been the result of erroneous action on the part of the association when the ten dollar life membership fee scheme was instituted. Be that as it may, it now exists and confronts the resolution and the work of this committee.

It must be given consideration in the handling of this question.

The suggestion heretofore made by the writer regarding the two kinds of membership, individual and representative, may not be practical nor just, yet careful thought finds much to support the idea.

If in formulating a detailed plan of action the life membership of the association is to be eliminated, what will be left with which to put into effect any scheme reported by the committee?

In order that the present movement might be made effective through the American Poultry Association it would seem that it must either retain the life membership or buy out the individual memberships. And in the latter proposition we are met with the usual requisites of such contracts, the assent of both buyer and seller.

However, if Mr. Robinson will suggest some practical way to avoid or remove what he points out as "the greatest stumbling block in the way of an effective reorganization of the American Poultry Association" he can render the committee valuable assistance and his help would be most heartily appreciated.

Further, I think the association itself would gladly consider any suggestion from him that would tend to bring about a practical remedy for any of the unpopular features of the present organization. I do not believe that there is a single life member of the association but would willingly relinquish his membership if confronted with a reasonably consistent plan requiring it for the improvement of the association or the broadening of its sphere of influence and effectiveness.

If this is true, all Mr. Robinson or any other critic of the association has to do is to present his plan. If he does not care to do this, and believes the first step necessary is to abolish the life membership scheme, will he kindly suggest to the committee some plan for practically doing away with it without destroying the association?

The writer does not essay to defend the life membership idea, but fully appreciates that the work of the committee is confronted with a situation that is, that has become fixed in the life and being of the association and that cannot be either ignored or incontinently disposed of.

For that reason it is suggestion that we want rather than thrusts at the association over our shoulders, as the association might dodge and the committee get the full force of the blow.

The task before the committee is no easy one, and it not only should, but must have the help of every breeder and fancier in the country. Mr. Robinson is capable of burying any feeling which he has toward the present organization and lending valuable help to the committee. Will he do it?

---

The very early hatched bird is apt to molt with the old stock in the fall. It is also apt to lay heavily all winter and as a result will not produce eggs which will hatch as strong and vigorous chicks as those from birds that begin to lay in January or February.

---

A full egg basket is the same as a full sugar-box and tea-caddy.

---

Industry in the poultry yard is the true basis of the poultry industry.

# Hereditary Tendencies.

## The Importance of Unseen Forces in Breeding Stock---Why Many Breeders Fail in their Matings.

By E. C. HUFFAKER, C. E.

AND the earth brought forth grass and herb yielding seed after his kind."—Gen. i., 12.

It is not said that like produces like," nor is such the law of nature. It is not individual, but race characteristics that are transmitted from parent to offspring and the offspring greatly resembles the former only when both are typical of the race to which they belong. The size of an ear of corn grown on a good soil depends, not upon the size of the grain planted, but upon the kind of corn; a small variety producing small ears, a large variety large ears. The important consideration, therefore, in selecting seed for planting or animals for breeding purposes is the race, rather than the individual. The fowl, for instance, might possess all the fine points of form and plumage required by the Standard, but this can give us no assurance that its offspring will approach perfection, unless it comes of a race of fowls approaching perfection.

That "like produces like" is true only in a general sense, and it is fortunate that such is the case, otherwise there could be no change and no improvement.

It is in fact impossible that it ever should be so in an absolute sense, for as every animal has two parents, and no two animals are in all respects alike, the offspring could not possibly be precisely like both. As a matter of fact the animal usually favors one or both parents in certain particulars, but is never an exact reproduction of either. It always bears a general likeness to the two races, from which it springs, and the resemblance to a remote ancestor is oftentimes striking. That is, an animal is liable to inherit the peculiarities not of its immediate progenitors only, but of any one of an indefinite line of ancestors. Perhaps in reality it inherits traits peculiar to each and all of them, and hence in a marked degree traits common to all. The laws of inheritance apply not only to the animal organization as a whole, but to the internal structure of its various organs as well, and to the extent that these internal organs conform closely to some fixed type they will be transmitted unchanged to posterity. Hence, an animal may in certain particulars strongly resemble its parents and yet differ from them in a marked degree in others. For instance, the relative position of the wing bones and the structure of the heart are practically identical in all fowls, yet the size, form and plumage vary greatly.

There is, therefore, an inherent tendency to change in all animals throughout their entire organization, but vastly more marked and, therefore, important in certain directions than in others.

The factor which more than any other induces change and emphasizes the tendency toward variation is a change in the conditions of life, and on the other hand that which tends to check variation is in those conditions pronounced. This follows from the constant effort of nature to adapt an animal to its environment, and this adaptation at times involves the structure of the most delicate internal organs. Even the structure and form of the bones may be profoundly altered, though the process is extremely slow. On the other hand, unchanging conditions tend to produce unchanging types. It has been found that the longer any organ, trait of character or distinguishing feature remains unchanged, the less slowly is change induced under varying conditions, and that when once an animal begins to vary in any part, the tendency to vary becomes more and more marked.

Where the blood of two races is commingled, which differ to the extent of forming varieties of the same species, the offspring does not, as a rule, represent a simple fusion of characteristics of the two races, but is as it were, compounded of distinct traits, each referable to one or the other of the two races; yet so governed by fixed laws that the crossing of two fixed race types will give uniform results. But if two such cross-bred animals be mated, the new type is liable to go to pieces during the first two or three generations. Crossing, as it were of necessity, owing to the new conditions imposed upon two stable races, induces a tendency to violent and rapid changes which is with difficulty checked.

From what has been said, it will be seen that the process by which a new variety of poultry is produced is the reverse of that by which an old one is perfected. In the former case radical changes in the conditions of life are introduced, most powerful among which is the union of established varieties by crossing. In this way nature is forced into new adaptations to correspond to the new conditions, and out of the many new tendencies which result the breeder may choose that which best suits his fancy. On the other hand, to perfect an established variety, the conditions of life must be as uniform as possible, especially must there be no crossing with other established varieties. And since varieties of fowls are but strains intensified, it is only birds of the same or similar strains that give the best results when mated; that is, the best results as far as the perfecting of the type is concerned, but the results may be very unsatisfactory in the way of decreased vitality where the mating involves close inbreeding.

Whatever the inbreeders may say to the contrary, the fact remains that the tendency of inbreeding is to reduce vitality, by which we mean the power of resisting the various destructive agencies to which nature, if free to act, subjects all animals. Most likely no evil consequences would result from inbreeding if nature were allowed to take a full hand in working out results, and it would be possible to produce a race of inbred birds as hardy as the hardiest scrubs or mongrels. The advantage which the scrub possesses over the inbred bird and over pure bred birds generally is that while the owner of the latter is concerned with fine points of form and plumage, nature delves into the internal organization of the scrub, into its very bones and marrow, and destroys, ruthlessly and mercilessly, everything that falls short of her standard of vitality and only birds of the strongest constitution can stand the strain. Poor digestive organs, a weakened heart action, or delicate lungs may not prove fatal to a bird that is housed and fed and cared for as tenderly as a child and the bird may live to transmit its debilitated constitution to its progeny; whereas a scrub, if so weakened, can count on no such care. It must live on what it can find to eat; it must go to roost unfed and unwatered; it must withstand cold and dampness, storms, floods and excessive heat; it must fight with its fellows and dodge its enemies and take its part in the endless struggle for existence. To the extent that it is weak it is likely to perish and leave the field to stronger birds.

Here is the mistake that the fancier makes, and will apparently continue to make for a long while to come. We can hardly expect him to turn birds over to the rough usage of nature, which score close to one hundred points. He cannot be expected to pry too closely into their constitutions and naturally looks to the show room for his prizes. No judge can score a bird on its constitution; only nature can do that, and she has trouble in getting at the fancier's birds.

No doubt, the fancier can get the better of nature for a time by keeping the selection of his birds in his own hands, but in the end nature is destined to get even with him and to invade his flocks when least he expects it. Not that nature objects to fine birds; on the contrary, fine points of form and color are things she keeps steadily in view, as all wild animals bear witness. But she is not content with a one-sided development. The bird of the finest plumage is sacrificed in her search after strong vitality, but in the end she secures fine plumage as well. Not only so, but in the end she gives to the bird of rugged constitution a brillancy of plumage, a luster of eye and beak and a carriage which weaker birds never attain.

The trouble with the fancier is he handles too few birds; his flocks are too small. While nature is making her selections out of millions, the fancier is making his from a dozen or fifty birds. Nature produces with riotous abundance and destroys remorselessly all that are diseased or feeble. She will devastate a continent to find a few animals that can withstand a new disease. While the fancier is hunting up prescriptions and preparing mixed dishes and finding shelter for his fowls, nature is doing her utmost to destroy the very ones he is most anxious to save. Nature says in effect to the fancier: "Your most beautiful specimens are not your most vigorous birds. I supply the variations from which you may select such specimens as may please you best, but the maintenance of the vigor of your birds rests with me. I alone can choose between a strong bird and a weak one, but in order to make my selection effective I must be allowed to put in operation those

agencies of destruction by which the strong are culled from the weak."

Man selects for form and beauty, nature for strength, and as perfect beauty only comes with perfect health and sound constitution, the best results can only be obtained when nature is allowed to play her part.

Geographical and climatic changes produce variations, breaking up existing types and inducing at times long enduring changes. Hence the disappointing results that often follow the shipment of birds or eggs long distances. Prolific layers fall to the level of mongrels and eggs from large strains hatch chicks which fall short in weight. Both birds and eggs become adapted to certain localities.

Nature seems at times to possess the power of provision. Thus, the Italian Leghorn hen when transported to the north of Europe is said to double her egg yield during the first year, instinct teaching her that the colder winter will carry off more of her chicks and that provision should be made for more.

Heredity has left its mark in the feathering of birds. Thus, we find the Mediterranean class feathering quickly, the Asiatics slowly. The tendency to vary is seen in the long drooping wings of weak Leghorns and Minorcas, which probably results from an effort of nature to keep the chick warm. This is true in a less marked degree of other varieties.

Acquired characteristics are not inherited. The freezing of a cock's comb has no effect whatever on the combs of his offspring. The change must come from within; from a tendency of nature to alter the form of the comb, experimenting, as it were, in this direction and that and quickly following up any variations that promise to work to the bird's advantage.

## GOOD RECORD FOR AN AMATEUR.

STAUNTON, IND., June 3, 1901.

*Editor American Poultry Journal.*

DEAR SIR: I am young in the poultry business, but I want to thank you for the help I have received from your paper in the way of saving some valuable Plymouth Rocks, which I have been able to do through your advice and recipes. I noted what you had to say in June number in regard to subscribers reading and not heeding. I read Mr. Coates' recipe for bowel trouble in chicks. I went to the drug store and had it filled and cured what few I had that were sick and have not lost a single bird from bowel trouble since. In fact I have wonderful success this year, having to date about 85 per cent of what I hatched and have some nice large ones that are the envy of some of my neighbors.

PEARL E. LAWSON.

## MR. PATCHEN LEAVES THE CYPHERS INCUBATOR CO.

Mr. Frank G. Patchen, who has been prominently identified with the Cyphers Incubator Co., as treasurer, has severed his connection with it and has disposed of his interests in it to other members of the company. He has not fully decided upon his future work but it is probable that he will devote at least six months of the year to literary work in New York. He has the best wishes of a large circle of friends in the poultry fraternity.

## Another Opinion on the "Weight" Question.

*Editor American Poultry Journal:*

I have watched the overweight wrangle until I am tempted to say a word or two.

The writer has always advocated a good, large, well formed Plymouth Rock, not exceedingly blocky or to the other extreme, that ranginess of the Minorca; we want a bird (Ply. Rock) whose looks would justify one in saying, "She's a rustler." The male and female of the American Plymouth Rock Club just about fill the bill. A fowl's activity depends much on its weight, and if this is the truth, the standard sized Plymouth Rock is a great deal better for utility purposes than one much larger. A large Cochiny White Rock, say two and one-half pounds over weight, will not lay as many eggs or forage as much as one nearer the standard. Neither will they produce as rapid growing broilers. The craze for large White Wyandottes led to what? An ungainly lot of cockerels that looked like White Langshans with rose combs. What's the fad now? A demand for excellent shaped specimens.

Should the judging be done by score card, the best shaped bird should win, providing he had no more cuts on color than his competitor; but if done by comparison it is the opinion of the judge which ranks the exhibits, in most cases.

To quote the Standard: "In all varieties of fowls except Bantams, all varieties of turkeys and geese and all varieties of ducks, except those prized for their smallness, when adult specimens are equal in their scores, the heavier one shall be awarded the prize; in all chicks or immature specimens, except Bantams, the one of less weight, if discounted for weight, having an equal score, shall be awarded the prize, but when each of such specimens are of Standard weight, the heaviest one shall win. In all varieties of Bantams, other things equal, the smallest bird shall win over the others."

We suggest that inasmuch as shape is discounted harder than color or size, that the Standard weight fowl (up to or over), if he is best in shape, be awarded the ribbon if other things are equal. Should a cockerel which is quite good in color, up to and over weight, and of poor shape, be permitted to win over one whose color is cut a trifle more yet whose shape is better?

In Bantams, the birds not being cut for weight, which should win, other things equal? The one of best shape. But such is not the case; we still go on, wading in our own quagmire, seeing many of the best birds unplaced at almost every exhibition.

To know our faults and not try to remedy them is sin. If shape makes the breed, guard it well and remedy the evil in the Standard. Let us not advocate disqualification for over weight but give the prize to the best shaped specimen if he be up to weight, other points being equal.

*D. Amos Berhans.*

*Seward, Neb.*

Every poultryman can provide shade for his birds even if he can do no better than to plant sunflowers. It is absolutely necessary for young chicks to have a cool shelter from the hot rays of the sun.

Treat your fowls as well as you do your cattle and they will pay you a larger per cent of profit.

AMERICAN POULTRY JOURNAL

Published the first of each month by
GEO. G. BATES, Editor and Proprietor.

FRANK HECK, Associate Editor.

Subscription price 50 cents a year in advance.

When delivered by carrier in Chicago 60 cents a year in advance.

Payment for AMERICAN POULTRY JOURNAL, when sent by mail, should be made by money order, registered letter or stamps.

Write name and address plainly, and if JOURNAL does not come regularly and promptly, write us at once.

In requesting change of address, be sure to give the old address as well as the new one. This is important.

Advertising rates will be furnished on application.

The reliability of new advertisers must be ascertained before an insertion of an ad in the columns of AMERICAN POULTRY JOURNAL can be made. This is a business matter, the justice of which is readily seen, as protection to the readers who answer advertisements.

Alway say when writing advertisers, that you saw it in the AMERICAN POULTRY JOURNAL.

All copy for advertising and manuscripts for publication should reach us not later than the 20th of the month preceding the date of issue.

## A Change of Advertising Rates.

We announce a change of advertising rates for AMERICAN POULTRY JOURNAL, to take effect Oct. 1, 1901. The present rate of $1.40 an inch for display advertising on yearly contracts will be changed to $1.86 ⅔ on yearly contracts. Complete rate cards covering the new prices on both short time and yearly rates for different sizes of advertising space are now prepared and will be sent on request.

While the new rate will take effect Oct. 1, 1901, the opportunity will be given present advertisers whose ads have been running six months or over to renew their contracts at the present rate, and it is hoped that all who have so royally patronized these columns in the past will take advantage of this opportunity and continue the pleasant relations that have so long existed between advertiser and publisher.

These new rates are consistent with the results and benefits that advertisers so freely report come from the patronage of the advertising columns of AMERICAN POULTRY JOURNAL. The best test of a constantly increasing circulation is the results obtained by the advertiser; and the prospects for a healthy and continued growth of A. P. J. in circulation and value to the advertiser were never so promising and apparent than at the present time.

While it may be premature and unnecessary to speak of plans for the coming season it is safe for us to promise that good hard work and endeavor on our part, for the benefit of both the advertiser and reader, will be faithfully performed in carrying out plans for making A. P. J. of value to all.

AMERICAN POULTRY JOURNAL.

## Fifty Dollars in Cash Prizes.

We want you to tell our readers what you know about one or more of the following subjects. We will pay:

Twenty-five dollars for the best article.

Fifteen dollars for the second best article.

Ten dollars for the third best article.

The contest closes October 1, 1901.

This is the first of a series of offers which AMERICAN POULTRY JOURNAL will make for the purpose of obtaining for our readers the best and most complete information upon the various subjects, which are of vital importance to poultrymen. We hear it frequently stated that the poultry press falls far short of what it should be as regards the teaching of the principles of success in the business except in the most simple and rudimentary forms. There is need for instruction along lines that will be beneficial to the thousands of breeders who have passed the elementary period of breeding and who feel the need of greater practical experience. There are hunner knowledge, which has been gained by dreds of persons who have given much study to certain questions and have intelligently planned and carried out experiments, which have proven or disproven many of the theories, which are too generally accepted as truth. These are the people who are in position to be of real service to the fraternity by making known the results of their research. We intend that the readers of AMERICAN POULTRY JOURNAL shall have the very best and most helpful instruction that money can buy, and this contest offer is one plan we have adopted to accomplish the result. We would like for every one who reads this to try for one of these prizes. The list of subjects has been selected with a view to covering a wide range, so that every breeder will find some subject with which he is familiar enough to write upon, with a fair chance of winning. The contest closes October 1. All copy must be in our hands not later than this date. The articles must be original and not have been published before. They must contain not less than 1,800 nor more than 2,500 words. The writer who covers his subject most thoroughly and presents it in the most comprehensive manner will be given first prize. The prizes will be awarded by a disinterested committee, which will be announced later. We reserve the right to retain all articles sent in and to publish them, if we so desire, giving full credit to the writers. Those writers whose articles do not receive one of the three cash prizes, but which are published by us, will be given a copy of the Standard of Perfection and a two years' subscription to AMERICAN POULTRY JOURNAL. Following are the subjects upon which we solicit contributions:

The process of molting. Care of the fowls during this period. What to feed and why to feed it. Is delicate color and gloss of plumage affected differently by different foods? If so, how and why? A general treatise on the subject of molting.

The best and most thorough explanation of line breeding, with a detailed plan for establishing a strain, a clear and concise statement of the principles involved in developing the desired characteristics of the fowl and embodying the results of too close inbreeding.

Preparing birds for the show room. Instruction which will enable the amateur to take advantage of the many little details which add to show condition. How to feed and care for the birds during their close confinement in show coops.

Instruction to the beginner whose ambition is to get prominently before the public as a fancier and breeder and establish a paying business.

The best method of starting a market poultry plant. The amount of money necessary to purchase stock and the profit to be expected from the outlay suggested. The amount of ground, number and size of buildings required and suggestions in regard to economical and successful management.

How to advertise successfully. Points to be considered in selecting a medium. Conditions affecting an ad and hints on the advantage of continuous advertising.

Has the specialty breeder greater chances of success than the breeder of several varieties, as regards prominence and high prices for stock and eggs? If so, why?

Advice on management of incubators and the advantage of their use, even though hens are available for the purpose.

Success with brooders. How to feed and care for the chicks.

Rules to be observed in getting the highest percentage of fertile eggs. Hints on house room, feed, care, selection and mating, as affecting fertility of eggs.

## Some Factors in Success.

WHITFIELD, ILL., June 8, 1901.

*Editor American Poultry Journal.*

DEAR SIR: Enclosed you will please find copy for change of my ad. I have about 800 chicks, all healthy and doing fine, some of them beginning to crow, and some of the Rocks are sure enough "ringlets." I have used trap nests the last three seasons and my chicks are all so marked that I can pick one up and by referring to my books not only tell what its parents were, but what its grandparents and great-grandparents were, their strong points and their defects. I find this part of the work of poultry raising is very fascinating. Trade has been good the past season, all surplus stock sold early in the year, and have had more orders for eggs than I could fill and do myself justice. Fully one-half my sales I can trace to the AMERICAN POULTRY JOURNAL, although I advertise in three other journals. Yours very truly, J. N. YOUNG.

The above letter is one of many which come to us *unsolicited.* We desire to call attention to it for the following reasons: First, because it answers the oft-asked question, "Is not the poultry business overdone?" Note what Mr. Young says: "Trade has been good the past season. All surplus stock sold *early in the year* and have had more orders for eggs than I could fill and do myself justice." Here is a condition of affairs which will be found existing with a large proportion of breeders everywhere. It is not confined to any particular locality, nor is it found in connection with any special breed of fowls. It is a sure result of having the right kind of stock and using proper business methods in disposing of it. The demand for high grade stock is never fully supplied, but poor quality is a drug on the market. What is needed is more good birds, and no individual breeder has a monopoly nor can he corner the market. All have an equal chance in the production of the kind that sell and bring the high prices. It is simply a question of using good judgment, the same as in any other line of trade. As long as people are born with a love for the beautiful in the animal kingdom, just that long will there be a constant influx of fanciers and a demand for fowls. Standard bred poultry has not only beauty to recommend it, but this desirable characteristic is associated with a utility value of such undoubted magnitude and importance as to place the business upon a lasting, substantial basis. To all who are considering the questions "Is the business overdone?" "Can I make it pay?" and similar ones, we would say, decide in your own mind whether you are willing to give the business the close study and attention necessary to make a success of it and whether you will go

into it with a determination to get to the top if anyone else can and to not allow repeated contact with seemingly unsurmountable difficulties to discourage you to the point of giving up.

HE KNOWS HOW HE GOT HIS GOOD BIRDS.

Another point in Mr. Y.'s letter is that he has used trap nests and consequently knows the line of breeding which has produced certain specimens and that this part of the work is very fascinating. Here are two cardinal points affecting his success and they are applicable to all other breeders of his class. We have never met Mr. Young nor seen his place, but we will venture the assertion that his business is handled methodically and in a systematic manner. We believe he is a close observer of details, doing things at the time they should be done and having good and sufficient reason for doing what he does. These points are not to be ignored if we are counting upon rising to any appreciable point in the business. The breeder who does not know where he gets his best birds, or in other words, what mating produced them, is groping in the dark and is seriously handicapped in competing with his more painstaking competitor. There is something more to the raising of prize winners than mating the birds and trusting to luck. A system of pedigree breeding can hardly be too elaborate to be practical where the main point aimed at is quality and in just such proportion as we study the science of breeding will we see our efforts to build up a profitable business crowned with success. Then, there is the fascination spoken of by our correspondent. A person who takes up the breeding of poultry with only the profit side of the question to influence him had better never start. If there is none of the fancier spirit in him he will not be sufficiently interested in the welfare of the birds to give them the care and attention necessary to successful management. This is one reason why all amateurs should, when making a start, select the variety which best suits them as regards shape and color of plumage. We have yet to find a conspicuously successful breeder who does not take pleasure in working with his birds. It seems that this a rule to which there are no exceptions. Many breeders who are to-day deriving good incomes from raising standard bred poultry are those who took up the work as a fad and afterward learned the importance of the industry as a business financially remunerative aside from the pleasure derived from it. The remaining point in Mr. Young's letter furnishing the basis for comment is

RESULTS IN ADVERTISING.

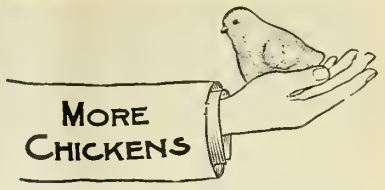
AMERICAN POULTRY JOURNAL has not been in the habit of blowing its own horn. In fact, our friends say that we have always been too conservative. We believe, though, that the line of demarkation between modesty and effrontery as applicable to business from an advertising point of view is undoubtedly much nearer a liberal interpretation of the word modesty than it is in social life. It is simply good business to push to the front and it is to be commended. Any publication has a legitimate right to make known its claims for patronage in as forcible and public a manner as the conditions justify, and to be consistent in its teachings to the advertisers it could hardly take any other stand. It has become quite the thing to devote a great deal of space to the publishing of testimonials from advertisers, but the plan has ceased to be productive of the desired result, that of influencing business, and is rather an unfavorable argument with which to get the shrewd advertiser who makes it a rule to know just what he is paying for. It seems that the sincerity of these testimonials cannot always be relied upon, and the fact that a publication finds it necessary to use them in great quantity is evidence that a weakness exists which demands strong measures to strengthen. We have in times past used this method of securing business, but have long since dispensed with it as unnecessary. The best indication of the value of a publication as an advertising medium is the condition of its advertising columns. If they are well filled with the announcements of successful business poultrymen, you may rest assured that the journal brings returns. Mr. Young says in his letter that he can trace fully one-half his sales to AMERICAN POULTRY JOURNAL, although he advertises in three others. These are the kind of reports we are continually receiving in liberal quantities. We can go over our letter files and pick out hundreds of them. This is not an exaggerated statement. We say hundreds, and we mean it. Mr. Young has obtained the results stated from the use of a small one-inch card, and this shows what AMERICAN POULTRY JOURNAL *can* do for its advertisers. We also have a letter from Mr. George W. Brown, proprietor of Ouachita Valley Poultry Farm, Camden, Ark., in which he says: "I have advertised in *every poultry journal of any note*, and of them all, I have found AMERICAN POULTRY JOURNAL by far the best. I find during the past season that it has paid me $20 for every single one that I have put into it." Mr. Brown carries a three-inch card and, as in Mr. Young's case, it appears each month in the year. The point to be noticed here is that while a small card pays well, a larger one pays much better in proportion. These two advertisers are referred to simply because their letters are right at hand. For the benefit of those who attach so much importance to testimonial letters as proving the value of a journal as an advertising medium, we have prepared a printed list, which we will gladly mail upon request. We believe in devoting the pages of AMERICAN POULTRY JOURNAL to pure reading matter and the announcements of our advertisers, with our own interests in this form as a side issue, and for this reason we do not burden our readers with pages of testimonials. We are publishing a number of letters from breeders this month relative to the condition of business during the past season and the prospects for the future, but they are not published for the complimentary mention of AMERICAN POULTRY JOURNAL contained therein. They are offered as an evidence of the prosperity of those who are breeding standard bred poultry upon correct lines.

**Pekin Ducks, White Wyandottes and White Plymouth Rocks,**

Winners at New York, Philadelphia, Boston, Hagerstown and smaller shows. Hens eggs, $2 for 13; $5 for 39; $12 for 100. Incubator eggs. $8 for 100. Duck eggs, $2 for 12; $5 for 50; $8 for 100. A few eggs from prize winning pens of ducks and hens, $5 for 13; $8 for 36. Send for circular.

***POLLARD'S POULTRY FARM, So. Attleboro, Mass.***

***F. M. POLLARD.*** ***GEO. H. POLLARD.***



Die by being lousy than from any other cause. You can talk about improper care and feed, lack of green food and grit, hut, when looking for the root of the trouble, look for lice, and when you find them, look into the merits of Lambert's Death to Llee Remedies.

Rev. H. H. Purrington, Mt. Vernon, Maine, writes: "We all use Death to Lice aud find it most satisfactory."

The Norton Poultry Yards, Dallas, Texas, writes: We have been usiug your Death to Lice for the past four years and it has given entire satisfactiou."

**More Chickens**

have head lice than most poultry keepers realize. Some think that these little pests are pin feathers on the top of a chickens head aud do not take the trouble to examine them closely uutil the broods begin to die off. One Massachusetts fancier says that it cost him hundreds of dollars to learn this. Death to Lice Ointment is made especially for the extermination of these little blood suckers, without injury to the little chicks. 100 doses 10c, postpaid.

**More Chickens**

tban should go into two coops are often crowded into oue. The lice will then crowd into these small quarters and assist to make the nights long, hot and miserable. The little mites or spider lice crawl out of the cracks and crevices aud extract more blood from the chicks than they can make during the day.

Chas. L. Evans, Wood River, Neb., writes: "I have given your "'Special'" a thorough trial. I had a henhouse that was polluted with mites. I mixed 4-oz. box of Special to one gallon of white-wash and gave it a thorough white-washing, I uow defy anyoue to find a louse about my hen house."

**More Chickens**

properly cared for, mean more money. Proper care means a liberal use ot Lambert's Death to Lice Remedies as well as suitable food and housing. No poultry keeper ever failed because he put too much money into Death to Lice. Many fail because they do not keep their flocks free from vermin. The most successful, money-making poulterers are those who use the most Lamberts. We have remedies for all kiuds of lice, on anything and everything. We put it up in all sizes of packages to suit all kiuds of people. We have all kinds of good testimouials as to its efficacy.

**PRICE LIST:**

Death to Lice Powder, 10c and 40c by mail; large sizes, 50c and $1, by express from here or nearest agency.

Death to Lice Ointment, 10c and 25c, by mail.

Death to Lice Special, 10c and 40c, by mail.

Sample of one each of the above 10c sizes at one time 25c.

Death to Lice Liquid, 1-qt. 35c; 2-qt. 60c; 4-qt. $1, from here or from nearest distributing point.

A 64-page illustrated book mailed free.

**D. J. LAMBERT, Box 305, Apponaug, R. I.**

## Now is the Time to Cull Your Flocks.

A good sharp axe is one of the articles which every poultryman should keep about his place and culling the flock is one of those endless duties which is often neglected. The axe should always be handy in case of disease, and the free use of it not only dispenses with the medicine chest and the expense of maintaining it, but it avoids the possibility of bringing upon one's self the trouble and disappointment resulting from the breeding of diseased specimens or those which have seemingly been cured, hut in whose systems lurk the germs of hereditary ailments that are prone to appear in the otherwise valuable offspring. In very large flocks the culling process never or should never cease, but at this season of the year more than ordinary attention should be given to this work. The early hatched broods are sufficiently matured to enahle the careful breeder to weed out a large percentage of undesirable specimens. Every flock contains more or less stunted specimens that can never he of value. There are also all

manner of cripples, from the chick that did not get out of the shell right to the older one which has been stepped upon by the horses or other stock. We cannot understand why any breeder should allow a lot of measly cripples to remain in the flock and detract from the appearance of it. Not only this, but they take up the room which should be given to the other birds, they consume feed which is a dead loss, and from the standpoint of humane treatment their existence should be ended. In single comb varieties all chicks with deformed combs or side sprigs should be disposed of and in the clean legged varieties those chicks with down upon the legs should be culled out, also those with off-colored legs. In many cases permanent white can be detected in the ear lobe of birds in which it should be red. Plumage defects which justify disposing of the chick are not so easily detected as the other points mentioned, but even in this respect the breeder who is familiar with his breed can find specimens which he knows will not be worth keeping. Above all, kill the sickly, puny ones and the monstrosities, which are most likely to be found in every flock. It is quite a common thing for us to pick out a bird that is remarkably fine in one or perhaps two sections, but a rank disqualified cull in others and keep it to "see what it will come to." Don't do it. About the only thing it will "come to" will be feed. This month is also a good time to cull the flock of old birds. Take out those which you have kept with the expectation that they would overcome certain defects, but which have failed to improve. Better get rid of the old cock or hen which you are keeping for "the good they have done in the past." And those which for various reasons have outlived their period of usefulness should be allowed to step down and out to make room for the youngsters. If due attention has been paid to egg records during the past winter and spring we will be able to pick out the poor layers and no doubt there are a few birds in every flock which can be profitably sacrificed on that account. The good layer is to be more desired by the fancier than by the utility breeder, although many people seem to think that this characteristic is not given its full value by the fancier. The fancier receives from $1 to $5 per sitting for his eggs, where the market poultryman seldom realizes more than 50 cents for the same number. For this reason, if for no other, the fancier should and does attach the greatest importance to egg production as regards numbers. These few hints are sufficient to show that the work of culling the flocks at this season of the year is a wise and profitable course to pursue.

## My Intention.

On page 496 of the June number, under Light Brahma cut, the Editor states: "These are the type of birds described by Mr. McGrew, etc., etc." From this we shall dissent just a little and say that in some particulars this cut will not meet the exact intent of the Standard. The New England Light Brahma Club has in preparation ideal cuts of Light Brahmas. When you can print these for the benefit of your readers you will then have my idea of the true Brahma.

For the July number we furnish an article on the Mediterranean breeds. This will be followed by a series of articles on American breeds, beginning with Plymouth Rocks, then Wyandottes, Jersey Blues, Rhode Island Reds, etc. Following this will come an article on Brown Leghorns in which we shall try and give all the information possible as gathered from personal experience in the yards of those who produce the best exhibition Brown Leghorns. The Editor having announced my willingness to answer questions relative to shape or color gives me the opportunity to say that great interest can be aroused and benefit derived by all, if this part of the attempt is properly indulged in. We gain much information through questions asked us and feel assured that all can gain by free interchange of thought.

*T. F. McGrew.*

By way of explanation we desire to say in connection with the above that the lines referred to by Mr. McGrew beneath the cut in June number were intended to express the general idea of shape as outlined by him and referred particularly to the full feathered features of the birds and not to the detailed description of each section. We should perhaps have stated this more explicitly, but did not think that an erroneous impression would be gained from the description.

Feather from Winnette, 1st prize hen Ill. State Fair, '00

**Closing Out Sale of Cornish Indians at Half Price.**

Everything to be sold, regardless of value. Prize-winners, exhibition and breeding stock. Will sell single birds, pairs, trios or any number to suit party. Write and get double value for your money. Sale to continue until all are sold.

**Jacksonville, Ill.**

## The Coming Poultry Shows

*Editor American Poultry Journal*

DEAR SIR: The Poultry show that attracts the greatest number of Poultry breeders is, all things considered, the most successful. Of course it helps out the treasury of the association to have a large attendance of town folks, at so much per, but I think you will agree with me that it needs a large gathering of breeders to make a really successful show. What can be done to attract a large number of breeders together? Why isn't it wise for us to follow the tried and successful methods of other stock breeders and have an auction sale in connection with a show? It is not necessary to give my views as to details. That is a secondary matter. What do you think of this plan? Why not ask your readers to give their views?

*W. H. Harrison, Jr.*

*Toledo, Iowa.*

The plan outlined by our correspondent in the above letter would be a unique one from the standpoint of poultry exhibitions and might prove a successful drawing card. In other lines of stock the auction sale has served to greatly increase the interest in exhibitions, and we see no reason why it would be other than beneficial at our poultry shows. There seems to be a kind of natural fascination about an auction sale for the average human being, which is perhaps born of a desire to get something for nothing, although it is a well-known fact that articles sold in this way oftentimes bring more than their real value. If the scheme was adopted by a poultry association and advertised properly, we imagine that considerable interest would be centered in it, as under these circumstances a large number of interested parties would attend the sale. Good birds would in many instances probably sell for more at auction than at private sale, as it is not an uncommon thing for an exhibitor to accept a price for a bird and before the show is over have to refuse double the amount from some other prospective purchaser. The association could make a department of this kind a source of revenue by charging, say, ten per cent of the sales for commission. We should think that all birds offered for sale should be scored previously and birds not reaching a reasonable score be rejected. Some such plan would have to be adopted to keep out culls, which would detract from the interest taken. Birds sent in for sale, whether entered for competition or not, could be designated as such by placing a card on the coops. A partial list of birds and the names of the breeders offering them for sale could be published in the premium list of the association, which would no doubt serve to attract a larger attendance of breeders. However, the numerous details could be arranged to suit the requirements. One prominent breeder whose attention was called to the scheme stated that he would go a hundred miles to attend such a show and would contribute a number of birds. We would be glad to have the opinions of breeders and exhibitors generally relative to the plan.

## Prizes for Photographs.

**We will announce next month, the particulars of a prize contest for photographs. This will be of interest to all our readers. Don't fail to notice it.**

Mr. George M. Leffel, Springfield, O., is now offering for sale some of his very best breeding birds. These are birds which he used in his own yards during the past season and which have produced some of his choicest young stock. They are the kind that Mr. Leffel would not have disposed of earlier in the season at any price, and the purchasers of them now will get stock that will do them good. Leffel's Barred Rocks have a winning record that is unexcelled.

Remember that the poultry of the country is one of the very largest and most valuable crops—something to be proud of.

PLANS NOW BEING FORMULATED FOR THE PRESENTATION TO AMERICAN POULTRY ASSOCIATION OF A PLAN OF REORGANIZATION ALONG THE LINES SUGGESTED BY MR. W. R. WOODEN AT THE LAST MEETING.

Messrs. Wooden, Hewes and Kimmey, who compose the committee which was appointed at the last meeting of the American Poultry Association to formulate a plan embodying the suggestions contained in Mr. Wooden's resolution, met in Chicago June 22. The numerous reports which have gone out stating that Messrs. Wooden, Pierce and Curtis were the members of the committee were in error. These last-named gentlemen were the ones appointed to select the committee proper. The matter was thoroughly discussed at this meeting and it was referred to Mr. Wooden with instructions to place it in shape for the consideration of the committee at another meeting to be held in the near future. The work of this committee has been the subject of much talk, and widespread interest has been taken in it. The prospects are now flattering that something will be done to make the American Poultry Association a representative body and place it in the position in the fraternity where it belongs and which it should occupy.

—o—

Poultry associations are striving to make each year's show a little better than the preceding year, and at the same time are striving to lessen the labors of their various committees.

To do this in the most satisfactory manner and at the same time economically to both exhibitors and associations, Mr. J. W. Sauer, of Trotwood, Ohio, manufacturer of the Gem Incubators and Brooders, and whose ad you will find in another column of this paper, is prepared to coop, feed, water and care for birds, in his new improved

Gem Folding Exhibition Coop, and thus lessen the labors of the various members of the associations, who are always quite busy at the same time with other details.

Our state show at Bloomington was cooped by Mr. Sauer last year, as well as several of the larger shows in Ohio, and wherever the Gem Exhibition Coop was used we found a pleased lot of exhibitors.

All associations that intend to coop their shows the coming season and have not already made such arrangements will find it to their interest and advantage to ask for estimates, as his dates are filling rapidly and only a few more open dates are on his list.

—o—

*Care During the Heated Season.*

Extra care should be given both young and old birds during the heated season. See that they have plenty of feed and fresh water often, also milk if you have it. I mix my daily mash with either sweet or sour milk and I find it stimulates the egg production. Hens which had ceased laying when warm weather came, began laying well soon after I began using this mixture. Feed mash at noon, grain nights and mornings.

*Galesburg, Ill.* *H. E. Bates.*

# $50 IN CASH PRIZES

## GIVEN BY

## *American Poultry Journal.*

### No "Strings" to Them. Everybody May Compete.

If you know anything about poultry you may win one of these prizes. We want you to tell our readers briefly what you know about one or more of the following subjects:

The process of molting. Care of the fowls during this period. What to feed and why to feed it. Is delicate color and gloss of plumage affected differently by different foods. If so, how and why? A general treatise on the subject of molting.

The best and most thorough explanation of line breeding, with a detailed plan for establishing a strain, a clear and concise statement of the principles involved in developing the desired characteristics of the fowl and embodying the results of too close inbreeding.

Preparing birds for the show room. Instructions which will enable the amateur to take advantage of the many little details, which add to show condition. How to feed and care for the birds during their close confinement in show coops.

Instruction to the beginner whose ambition is to get prominently before the public as a fancier and breeder and establish a paying business.

The best method of starting a market poultry plant. The amount of money necessary to purchase stock and the profit to be expected from the outlay suggested. The amount of ground, number and size of buildings required and suggestions in regard to economical and successful management.

How to advertise successfully. Points to be considered in selecting a medium. Conditions affecting an ad. and hints on the advantage of continuous advertising.

Has the specialty breeder greater chances of success than the breeder of several varieties, as regards prominence and high prices for stock and eggs? If so, why?

Advice on management of incubators and the advantage of their use even though hens are available for the purpose.

Success with brooders. How to feed and care for the chicks.

Rules to be observed in getting the highest percentage of fertile eggs. Hints on house room, feed, care, selection and mating, as affecting fertility of eggs.

## $25 For the Best Article.
## $15 For Second Best Article.
## $10 For Third Best Article.

The list of subjects has been selected with a view to covering a wide range, so that every breeder will find some subject with which he is familiar enough to write upon with a fair chance of winning. THE CONTEST CLOSES OCTOBER 1. All copy must be in our hands not later than this date. The articles must be original and not have been published before. They must contain not less than 1,800 nor more than 2,500 words. *The writer who covers his subject most thoroughly and presents it in the most comprehensive manner will be given first prize.* The prizes will be awarded by a disinterested committee, which will be announced later. We reserve the right to retain all articles sent in and to publish them, if we so desire, giving full credit to the writers. Those writers whose articles do not receive one of the three cash prizes, but which are published by us, will be given a copy of the Standard of Perfection and a two years' subscription to AMERICAN POULTRY JOURNAL.

These prizes are worth trying for. You can lose nothing but a little time and you may be one of the winners.

Prepare an article at once and send it in. Address

# Signs of Prosperity.

**The Following Letters are a Few of the Many Received from American Poultry Journal Advertisers. Lack of Space Prevents the Publishing of More of Them this Month, but we will Find Room for a Goodly Number in Next Issue. They Should Serve as an Inspiration to all Breeders.**

MARSHALLTOWN, IOWA, June 17.
*Mr. Geo. Bates, Editor American Poultry Journal, Chicago, Illinois.*

DEAR SIR: Answering yours of the 12th, will say that I had a very satisfactory trade in the disposition of surplus breeding stock early in the season, and the past one, I may truthfully say has been the best I have ever had in sales of surplus eggs, and report of hatches quite satisfactory, only duplicating two or three orders, and only two or three instances in which the hatches were unsatisfactory, and two of the parties at that wrote that the trouble was not with the eggs, but with the hens.

My hatches at home under the hens have been exceptionally good, in some instances 100 per cent, and I have a fine and promising line of Blue Barred Plymouth Rock chicks that ought to make winners in the show room during the coming exhibition season. I am frank to say that I acknowledge many of my sales through the source of your valuable publication. Very truly yours,

*J. M. Holt.*

---

FLUSHING, O., June 17, 1901.
*Editor American Poultry Journal.*

DEAR SIR: Replying to your favor would say the demand for stock the past year was better than ever before in the twenty-five years I have been an advertiser of Barred Rocks. Stock was all sold out early and I had to return money for several late orders sent in. Egg trade in number of settings has not been equal to the past few years, but it has enabled me to get out a grand, good lot of about 1,200 chicks, 200 of them March hatch. Some of these are being ordered already. Eggs hatched well at home, especially so in the incubators, and the chicks have grown in my outdoor brooders like weeds. Have had but one complaint of poor hatch this season. That order was at once refilled free. The outlook for a good fall and winter trade never was more promising. From the information at hand the crop of early chicks is short this season, so the fellow that has got plenty of early hatched, good birds will be strictly in the swim when fall fair show stock is called for.

*Joe Farmer.*

---

FAYETTE, Mo., June 15, 1901.
*Editor American Poultry Journal.*

I have had an exceptionally good egg trade from all sections of the country. Orders were filled as early as February. Hatches were not so good early in the season, but I refilled all poor hatches free, notwithstanding I advertised at 'half price." In consequence I received in every instance, highly complimentary letters of thanks for generous treatment. By February I had sold all surplus birds, showing that the demand for Buff Rocks was never greater, and that ads in such papers as the AMERICAN POULTRY JOURNAL pay, especially if the birds have records for high scores and winnings, such as Mason's Nuggets have proven. My young stock is thriving and shows up elegantly. I expect to exhibit at several shows next winter. Will have some early birds for customers. The outlook is bright. The Buff Rock lost its greatest champion in the death of H. S. Burdick last May.

*H. P. Mason.*

---

PROSPECT, O., June 14, 1901.
*Dear Mr. Bates.*

Yours of recent date to hand, and in reply will say that we have had a very satisfactory trade the past season, our trade during the past eight months has increased one-third over last season, and that was the best year that we ever had. Prices have been better and the buying class are looking for the best. Our hatching as a whole has been as good or better than any year I can remember of, our chicks come out very strong and healthy and grow very fast. We have set about 5,000 eggs and have by far the largest number of chicks that we have ever had and we find that in this part of the state chicks are growing very fast, as it has been a very good growing season for vegetation, and this makes many insects

SHELDON'S WASHING COMPOUND

WASHING MADE EASY.

The Greatest Labor-Saving Invention of the Age. Three Hours' Time Saved Every Washday.

***No Rubbing Required.***

Saves time, labor, money, and wear on clothes. One level teaspoonful will do a washing in five minutes and make your clothes whiter, cleaner, and with less labor than ever before. ***Remember, will not injure the finest fabric.*** Once tried, always used. Send 10c for trial package, postage paid. Address

F. A. SHELDON, 2618 Caroline st., St. Louis, Mo.

for the chicks. We run ours in the oats, wheat, corn and extensive grass fields, which at this writing are so growthy that it makes a great cover in the hot days. I find that the closer we can raise our chicks to nature's methods the better success one can look for. I raise all my birds with hens and hatch with hens. I have had all the egg trade that I could handle. I made a very heavy shipment of Golden, White and Buff Laced Wyandottes to Australia recently. Our foreign trade has been good. I look for the heaviest season's trade that the fancy has ever known this fall and winter. Money is getting plenty and fanciers, as well as other classes, buy in proportion to their income. Your paper has done us good service the past season and I have always found it a good advertising medium for the past eighteen years. Wishing you success, I beg to remain, Yours very truly, *Ira C. Keller.*

---

QUINCY, ILL., June 15, 1901.

*Editor American Poultry Journal.*

DEAR SIR: We are in receipt of your favor of June 12, and in reply, will say that our season's business has been excellent, and very satisfactory Our sales both through our incubator department and through our poultry department have been far better than expected, and at the present time the indications are the coming season will be an excellent one.

We have an exceptionally fine lot of young stock that promises to be far better than we have ever had heretofore, having set nothing but eggs from the cream of our entire flock. The present indications are that the poultry business during the next few years will far excel any business heretofore. We wish to thank the editor of the AMERICAN POULTRY JOURNAL for the good work the AMERICAN POULTRY JOURNAL has done for us in assisting us in making sales that have brought forth our enormous business the last year. You can rest assured that we have a place in our hearts for the AMERICAN POULTRY JOURNAL.

Wishing you the best of success, we remain. Yours respectfully,

*Reliable Incubator & Brooder Co.,*
*J W. Myers, President.*

---

DES PLAINES, ILL., June 15, 1901.

*Editor American Poultry Journal.*

DEAR SIR: My sales for the past year have been much better than any former year, both in stock and eggs. Egg trade was exceedingly good up to June 1, in fact I sold all I had to spare. Have nearly 500 chicks out and lots of early ones that are looking fine, nearly all raised in brooders. I raised over 97 per cent of my first three hatches from my machine, that is, did not lose 3 per cent of chicks I put in brooders. Yours truly, J. L. JEFFERSON.

---

CHICAGO MARKETS.

The poultry market is in good shape for everything except small spring chickens. Old hens are held up well and we look for continued good prices for the next few weeks. We are selling at present as follows:

LIVE POULTRY.—Old hens, 9c; ducks, 8 to 8½c; turkeys, 6 to 8c; spring chickens that weigh 2 lbs. or more each, 18 to 20c; 1 to 1½ lbs., 14 to 16c. The market is overstocked on springs and we look for lower prices. Spring ducks, 10 to 15c. Small ducks are dull. Geese, $4 to $8, according to size. Spring geese, $3 to $6 per doz. Pigeons, $1 per doz. Eggs, 10c per doz.

We are making a specialty of handling poultry direct from breeders. We see no use for poultrymen selling to local dealers. They should ship direct and get all there is in it. Local dealers do not handle goods for nothing. They are working for what profit there is in it and breeders might as well have it for themselves. They raise poultry for what there is in it and it is better for them to ship to headquarters. Some people think it takes an expert to ship poultry, which is not the case. It is very easy. For those who are not familiar with the manner of shipping produce we have gotten out a little booklet giving instructions for making coops, preparing and shipping poultry, which we will be glad to send free to anyone asking for it. We will also send market report and shipping tags free.

**Wyandotte Sale New York Winners.**

We offer 200 of our Golden and White Wyandottes at greatly reduced prices for the next 60 days. These are right out of our this years breeding pens, and such a rare chance is seldom offered. These include many of our New York winners and many other winners, every bird a fine one. Don't miss this. Eggs the balance of the season from our fine matings $1.50 per sitting straight, We have a lot of fine Belgian Hares, all imported stock, at very low prices. Large circular.

**IRA C. KELLER, Box 75, Prospect, Ohio.**

**THE LIFE OF THE INCUBATOR CHICK** depends upon the care given after it leaves the incubator. It is therefore necessary that you use a first-class brooder. You get this in the **WABASH BROODER**, simple in construction, built on honor, and will rear to a healthy maturity a greater portion of chicks than any other brooder made. Zero weather, a snow or thunder storm will not interfere with the healthy growth of your chicks if you use a **WABASH** brooder.

This Brooder is sold under a positive guarantee to be the equal of any made, and if it is not as represented in every respect your money will be refunded. Price $7 00.

**G. C. FLEGEL, Westville, Ind.**

**JORGENSON'S BARRED PLY. ROCKS.**

My birds are winners in strongest competion. They are large size, elegantly marked and the kind you will be proud to own. In addition to other regular prizes won at Racine Show, I had 1st cockerel and 1st pen. First prize cockerel was pronounced by experts to be a duplicate of the first prize bird at Chicago. I have some **FIRST CLASS BREEDING BIRDS** for sale, and am accepting orders for eggs from my choicest birds at $2.50 per sitting.

**CHAS. P. JORGENSON, 922 Forrest st, Racine, Wis.**

Secy Racine Poultry, Pigeon and Pet Stock Assn.

**MATTESON HAS**

***Just What You are Looking For***

The right kind of stock at the right prices. Leghorns—Single-comb White, Buff, Black and Rose-comb Browns. Wyandottes—Golden and Black; Barred Rocks, Partridge Cochins, Game Bantams, Pekin Bantams, Rouen Ducks and White China Geese. Also Scotch Collie Dogs—the poultrymen's dog. We win with our birds each season. Have won this year at Upper Sandusky. Carey, Bucyrus and Sycamore—all good Ohio shows. Special bargains in cockerels and eggs now.

# Silver Wyandottes.

By A. C. LeDUC.

I HAVE been asked to write something about the Silver Wyandotte, something that would be of interest to readers of AMERICAN POULTRY JOURNAL and of value to other breeders. Notwithstanding my long experience with this grand breed I cannot help feeling somewhat incapable of doing it justice, but will endeavor to give a few thoughts regarding it. While we also breed Barred Plymouth Rocks and White Wyandottes, our hobby is the Silvers.

When we first become interested in poultry, we chose this variety above all other breeds and we have never yet had occasion to change our minds regarding it; on the contrary we like them better than ever. We think their plumage is the handsomest of all and their shape and general make-up as well as their true worth as an all-purpose fowl are equaled by no other breed. They are the ideal for both fancy and general purposes. As layers they will lay as many eggs all the year around as any other breed. We have pullets that began to lay the middle of last November. Some of them were taken to the Bloomington and Chicago shows and now, June 10, they are laying as merrily as ever and have laid continuously since November, laying through both shows. For the table, we think they are also the choicest of all breeds and always feel that it is somewhat of a pity to use them for that purpose. A breeder at one of the shows last winter made the remark to us that it was too hard to breed good ones. We have not found them that way. Of course, they are harder to breed to Standard requirements than a solid colored fowl, but in our own yards we have made great improvements in them since we first began to breed them. My breeders have each year produced sons and daughters better than themselves and I am inclined to believe that this is more than some outh Rock breeders can say of their birds. outh Rocks can say of their breeds. It is not my intention to cast any reflection upon the Barred Plymouth Rocks but I have bred the Silver Wyandottes and the Barred Rocks side by side for a number of years and find the Wyandottes superior in all ways. I speak from experienee and careful observation and there are many breeders who will testify to this. We note that at the largest shows the Wyandottes, all varietics, are fast gaining ground. These classes, having the largest entries of any breed. I will not attempt to cover the whole ground relative to mating and breeding them successfully, but will only offer a few suggestions along this line. One must use good judgment in mating; most assuredly any old thing will not do. If you know what an ideal Silver Wyandotte is, and this you must know to make a success breeding them, you can then intelligently mate them. We believe that one can produce good birds of both sexes by the same or single mating. If we were compelled to produce males and females like our Barred Rock friends do, we would probably have to resort to the double mating system. Some of the Barred Rock breeders may think we are hitting them rather hard. Well maybe we are and I would not be surprised to

SILVER PRINCE, SCORE 94½.
First Prize Silver Wyandotte Cockerel at Illinois State and Chicago Shows. Judge J. H. Drevenstedt stated that this was the best S. L. Wyandotte male in lacing, wings and general make-up that he ever saw or handled. Owned and exhibited by A. C. Le Duc, Chenoa, Ill.

receive some criticism, to which we believe the pages of A. P. J. are open, but we have an advantage in not being compelled to breed cockerels and pullets to look alike, hence we go on in harmony and do not have to criticise each other and put up $100.00 to send birds to some editor to have their breeding qualities tested. We are often times

SILVER BELLE, SCORE 94.
First Prize Silver Wyandotte Pullet at Illinois State Show. Owned and exhibited by A. C. Le Duc, Chenoa, Ill.

very much amused when we read the many different articles on mating Barred Rocks, but I am getting off my subject. In mating Silver Wyandottes we should get our breeders as near Standard requirements as possible, both male and female. Do not mate a good cockerel to a cull hen to produce exhibition birds. Do no lose sight of shape or you will lose sight of the Wyandotte and simply breed Wyandotte plumage on a Brahma or Langshan or whatever the shape may be. We would sacrifice a little under-color for good surface color, but get the slate under-color, if you can. What we should guard against most is squirrel tails, pearl eyes and white earlobes. We are cranks on comb and wing bar on males. We believe nothing is more becoming to a Wyandotte male than an even, medium-sized rocker comb and a good laced wing bar. We need improvement in these two points; also on lacing. In this connection we would call attention to the cut of Silver Prince shown herewith. We believe he can be called perfect in wing and lacing and nearly so in comb. To get good results in mating always offset defects in the male by the female; or in other words, if you have a male that you wish to breed and which is weak in some section, mate with females strong in that same section. We believe that in Wyandottes as well as in all other breeds the male is half the pen and unless we have a good male to head our pen we cannot hope for much success. We are also an ardent advocate of line breeding. The Silver Wyandotte is profitable for the fancier as well as for the utility or market breeder. To illustrate this, will say that last December we wrote to a number of breeders of Silver Laced Wyandottes in five different states. These were the largest breeders. We asked them what they had for sale in the way of first-class pullets. The result of our investigation was that only two of them had any of that class of pullets left for sale. Those who did have held them at prices ranging from $20.00 to $35.00 each. Some breeders wrote me that they were sold out and had a large demand for more. This was in December before the season for sales had really begun. We believe this is ample evidence that the Silver Wyandottes are in good demand, and since there has been organized a Silver Wyandotte Club we will push this grand breed to the front, and I wish to here say a word to the reader; if you breed Silver Wyandottes and are not a member of the Club, we urge you to become a member at once, as you will surely profit by it and at the same time help to uphold and stimulate the interest in the breed. Mr. E. S. Tarbox, of Yorkville, Ill., is the secretary of the Club, and will be glad to furnish you any information which you desire.

———o———

The articles on "Russia of To-Day," by Henry Norman, which have been a feature of Scribner's Magazine (but have been interrupted for several numbers), are resumed in the June number with a paper on "Finland," which is just now the center of interest on account of the efforts of the Russian Government to suppress the Finnish language in official business. Mr. Norman writes very sympathetically of this hardy people who have so long maintained their individuality while a part of the Russian Empire. He gives remarkable instances of their energy and integrity, and shows the pathos of their attempt to keep their identity against heavy odds.

The farmer's wife who neglects the poultry is the woman who has hard work to get her husband to give her pin money.

**BLANCHARD'S WHITE LEGHORNS.**

**The Leading Strain of Heavy Layers**

Are no experiment, having been carefully selected and bred for over 20 years with results that fully justify the claim that they are **THE GREATEST LAYING STRAIN OF SINGLE-COMB WHITE LEGHORNS IN EXISTENCE.** No labor or expense has been spared in building up this strain, and while the production of large, pure white, fancy market eggs has been the main object, **STANDARD QUALITIES** have not been neglected. They are large, vigorous active and handsome, unexcelled for introducing new blood or as fonndation stock. 1,000 birds for sale. Cockerels for sale. **Eggs for hatching from finest stock** in large or small lots.

**H. J. BLANCHARD, Box 997, Groton, N. Y.**

**BUFF LEGHORNS and BUFF P. ROCKS.**

**EGGS at Greatly Reduced Rates** for the balance of the season. ***WHITE and BLACK BEGIAN HARES.*** In Blacks we have several bred does for sale that are extra fine. Whites as fine as are in the world, for sale at reasonable rates.

***AUG. D. ARNOLD, Box 77, Dillsburg, Pa.***

# Experience and How to Get It.

**By HENRY M. LADD, Cleveland, Ohio.**

THERE never was a time in the history of poultrydom when so many people were going into the business. The woods are full of them. They swarm even in the cities. Most of these people, I am sorry to say, are going to be disappointed. They have caught that contagious disease known as "hen fever," and with many it has to run high, and run itself out before there is a reaction and normal health sets in. This has been a great year for poultry. Prosperity now so widespread is felt with stimulating energy in the great poultry industry as everywhere else. High prices have very generally prevailed. The attractiveness of this fascinating and absorbing business has proved irresistible to a larger number of men and women, young and old, than ever before. My correspondence, extending over the whole country and beyond, indicates very strongly what the tendencies are. It also indicates another thing, a universal lack of practical knowledge on even the most essential points of this intricate industry. Most of these people are making the venture from the utility standpoint. They propose to furnish broilers and eggs for market, and have figured out on paper how easily it is all to be done, and what the profits will be—especially the profits. Nine out of ten are likely to make a failure of it and will thus bring the whole magnificent industry into bad repute. And they will fail simply because they do not know how to go at it, and are therefore bound to make too many mistakes. The simple fact is they have no experience. They have read much perhaps, and have dreamed not a little, and now they are eager to reap a golden harvest. So are we all, but golden harvests do not have a habit of falling into people's laps. Experience is essential; it is absolutely necessary, or failure is certain. Seeing an immense building, looking somewhat like a poultry house, rising upon a hilltop, one day as I was passing, I made it my business before long to call and inquire what was going on. "This," said an elderly gentleman, "is my broiler plant. I expect to send 25,000 broilers to the Cleveland market every year." "Good!" said I; "let me congratulate you and the Cleveland market. May I take a look at your building?" "Certainly; look all around and see if you don't think I've got things just about right to control the Cleveland market." I did look around, and as I returned to the house I remarked, "So you are going to send 25,000 broilers to the Cleveland market each year! Let me tell you something; you will never send one, not one! You will have a first class fertilizer factory, and cemetery ground, on yonder hill, and you can grow any kind of truck around that house that you like; dead chicks are a splendid fertilizer." "Don't talk to me that way," he said. "I have been studying this subject for years and have read almost everything that is printed." "Well enough, as far as it goes," said I, "but mark my words, you will never send a single chick to market from that house." That was years ago, and he never has. If he had dumped his money into Lake Erie, as I advised him to do, he would have had less worry and care, and gotten rid of it just as soon. There is the trouble—plenty of theories, but no experience. Much that is written in books and journals is written by men who sit at their desks and evolve theories, but who have seen little or nothing of downright, practical poultry work Difficulties and obstacles are light as air on paper, but there are enough of them, weighted with tons of lead, in actual, practical, every day, and all the year round poultry farming to sink the stoutest heart. What is wanted is experience in meeting these difficulties, and overcoming these obstacles. How shall we get it? That is a practical question and one that deserves fair answer. There are various ways in which it may be obtained. It may be gained by years of patient toil, unflinching toil, sober, industrious toil. That is the way it has generally been obtained, if it is experience that is good for anything. But life is too short to spend the most of it in getting experience to be used during the brief remainder of it. Another way is to go to an Agricultural College and enter the poultry class. But this is expensive, and largely experimental, and in the nature of the case is more bookish than practical. Still another way is to go right into a successful poultry farm and serve an apprenticeship. This is the best way of all. We take such apprentices at Crescent farm, charge them nothing for their tuition, and let them learn the business by seeing it done, and doing it themselves under the direction of the manager. This is eminently practical, and in a year's time they have mastered almost every detail of the varied work of the different seasons, and are fit for service, either as owners and operators of their own farms, or as managers for others. There is large demand for good, competent, reliable managers of poultry plants. We are constantly receiving inquiries for such men, but they are exceedingly difficult to find. Those who have been with us for any length of time we can generally recommend. But there is still another way to get experience, and that is to buy it right out for a small sum, and in this way avail yourself of the ripened experience of others. In consultation with my manager, who has an experience of twenty-seven years, I am now acting as advisory counsellor to a host of people in all parts of the country, and for six months at a time, for a small fee, direct their operations by mail. When they need advice they have it for the asking, and many a difficulty is solved. If I could have laid my hand on twenty-seven years' of experience at the very start and outset of my career as a poultry fancier and breeder, I would have thought myself exceedingly fortunate, and a gainer in my business of at least that much time saved. Time is money, but it is not often that you can turn time into money at as small a cost as this plan involves. These are some of the ways in which to get experience, but experience in some shape you must have, if you expect to make your business pay, or reach the smallest measure of success.

### I. P. GAZETTE'S EXPERIENCE DEPARTMENT.

The *Illustrated Poultry Gazette*, of Topeka, Kansas, is running an Experience Department that is proving to be an interesting feature, there being a large number of instructive experiences in the July number. They offer cash prizes for the best articles. A free sample copy will be sent anyone asking for same. Mr. Geo. H. Gillies, publisher and editor, has brought this journal to the front and it will stay under the present efficient management.

### PAN-AMERICAN STANDARD.

The next feature of importance in which the *Poultry and Belgian Hare Standard*, of Kansas City, is concerned, will be the Pan-American Edition, which in its general typography and make-up will be an exposition of the representative poultry fanciers of the West. The Western fraternity in the past have had no adequate opportunity to show the progress made by them in their efforts to produce stock as per the requirements of the Standard of Perfection. This special number will be as complete and artistic as good illustrations and fine printing can make it. Full particulars will be told in the July issue, which number will be mailed free upon request.

### FANCY FOWLS.

Mr. Chas. M. Meacham, publisher of *Fancy Fowls*, has the following to say of his bright and newsy publication: "Twenty-five cents is all it takes to pay for *Fancy Fowls*, the phenomenally successful and most widely read poultry organ of the south. Established in 1897, it is a credit to its section, the great and growing South. It is out on time the 10th of each month, is prosperous and responsible. As a low priced paper it is in a class by itself and is better than most 50c papers. Thirty-six to sixty pages. Largest circulation in its territory of any poultry paper and unequaled as an advertising medium to those wanting to reach Southern readers. Address, enclosing 25c in coin or stamps, Fancy Fowls Co., Hopkinsville, Ky.

Mr. Frank H. Thomas, of Jacksonville, Ill., has decided to close out all his Cornish Indian Games, and will hereafter breed only Buff Wyandottes. Mr. Thomas is an old breeder of Cornish Indians, and his record and stock are well known to the breeders of this variety. He is offering all his prize winning birds, some of them scoring as high as 95 by Felch, Heimlich and Hewes, and this is undoubtedly an exceptional opportunity to purchase high grade stock at less than its real value. Birds from his yards will make valuable additions to any high grade flock, and breeders of this variety should not fail to correspond with Mr. Thomas in regard to what he has for sale.

There is no such thing as too much poultry. If the yards are crowded, there is always room at the market.

Begin now to prepare for the show season. The work cannot be done at the last minute.

After the quality of the flock is established, the next vital step is the advertising of the fact that you are a prize-taker.

# THE FANCIER IN THE POULTRY YARD

THOS. F. RIGG, Iowa Falls, Iowa.

JULY and August are trying months for the growing stock. The quality of stock we will round up this fall will depend, to a great extent, upon the manner in which we care for the stock from now on. We should be most careful as to the kind of food supplied. We who are rearing show birds and choice breeding stock can make or unmake the season's profit during these two hot months.

It can be safely asserted that, taken in a general way, chicks are fed too much rather than too little during the heated term. The birds that you and I, my friend, expect to ship for competition in the fall and winter shows (and our breeders, too) *must be kept growing every day*—growing bone and muscle,—building frame. This is positively necessary. And we must so feed that the birds will not become over fat.

In this connection we ought to start with this self-evident fact in view: That growth depends entirely upon digestion, it being here taken for granted that the stock is in perfect health, properly yarded, etc. We must so feed that the birds will use in growth all the elements in the food given, and that there be no waste. The moment a bird ceases to do this that moment it goes out of condition and ceases to advance. It is right here that the turning point comes in many yards. The stock is not properly fed, and nature rebukes the feeder.

Now, what to feed. It is impossible to here state a bill of fare that could with success be adopted by every fancier. Conditions are so widely different in the breeding yards of America. Nor is it necessary to here enter into a discussion of "balanced rations." Just apply common sense. Feed such materials as are rich in bone and muscle and blood producing elements, avoiding foods that are fattening. Wheat and hulled oats, with a little millet occasionally, are unquestionably the very best grains that we can use. An occasional feed of cracked corn is desirable, but this should not be fed daily to stock closely confined. Chicks that have unlimited range can be fed more corn, for they will pick up a sufficient supply of insects, etc., to balance the ration. Our growing stock should have a soft feed once a day. Under no circumstances should this be given in a raw state. It should be thoroughly cooked, and thus fed dry. For this there is nothing better than the old and commonly used mixture of ground oats, corn, wheat, to which is added a little oil cake meal. After cooking stir into each feed a little of some of the animal food now within the reach of all fanciers. I have found nothing in this respect so desirable as deodorized blood meal.

Let me again state that we must be very sure not to overfeed. Chicks hatched prior to June 1st should not be given more than three meals a day from now on till late in the fall.

### IN BRITISH WEST INDIES.

I asked a customer of mine (a subscriber to the AMERICAN POULTRY JOURNAL) Mr. John Tench, Port Morant, British West Indies, to give the readers of the A. P. J. some information regarding the poultry business in his country. The following letter from Mr. Tench will, I think, interest American fanciers:

You ask me for some information regarding the poultry industry out here. It is "a very small affair." I keep fowls more for the love of them than for the money there is in them. Of course every year I sell a few settings of eggs and some birds for breeding purposes. but the demand is not very large, and the people who buy want the very finest birds for three or four shillings each. (A shilling is 24 cents.) I ask ten shillings for a cockerel and thirty shillings for a trio, and often fail to make a sale, as the price is considered too high. Fowls thrive wonderfully here when taken proper care of, and I have had no trouble whatever this season. Have not lost a chick, except by accident, and they are thriving nicely. I feed corn, oats, breadfruit and bananas (the two latter mixed with bran and animal food) and for the growing chicks oat meal,—cracked corn and ants' nests. The ants' nests are very valuable, and it is wonderful how the chicks thrive on them.

Our season begins in January, and I always have lots of chicks. We have a great enemy in the mungoose, and sometimes suffer immense losses. [The Mungoose is a weasel-like animal. Length of body, 16 to 18 inches. Length of tail, 14 inches. It kills numerous birds, sucking their blood and leaving the body uneaten.—T. F. R.] Once I lost 40 head, and on another occasion 32 fine chicks by a mungoose getting into the brooder shed. I have had no losses that way of late, for I have about cleaned them out with dogs and poison. The trouble here is that only a few people are buyers of choice stock, and therefore the trade is small. A few people raise a limited number of turkeys and ducks, but there is no regular business done in that line here as in America.

The Agricultural Society makes importations of thoroughbred poultry from time to time, and they are sold at auction to the highest bidder. Of course the birds do not bring what they cost, but it is done to introduce new blood into the country, and if the people who buy knew how to breed and to keep the breeds pure and up to a high standard some good would come of it. I am sorry to say, however, that such is not the case. The average poultryman here when he gets hold of good stock starts at once crossing, either with some other breed or on the common native fowls, in the insane hope of producing better fowls than the thoroughbreds, with the result that at the end of a season or two he has nothing to show but a lot of mongrels, not worth looking at and fit only to eat.

We make a specialty of Printing for Poultry Associations, and are already booking orders for the winter shows. Secretaries send for prices,

Woodbine Press, Box 130, BROCKTON, MASS.

## It is Your Cake

Next season if you place your order for stock or eggs with Duston. My

# White Wyandottes

Have won more prizes the past show season than any other strain in the country. I challenge any one to show a strain that has won the prizes mine has in the past five years. Regards practicability reminds me that my pullet sent an Experiment Station laid 23 eggs in January. My matings consist of the finest pens I ever owned. You have the same chance to raise prize winners that I have. Order at once and get your chicks out for the early winter shows. Eggs $5.00 per sit; two sits $8.00; three sits $10.00; five sits $15.00. or $20.00 in hundred lots. Catalogue 2 cents for mailing.

**ARTHUR G. DUSTON, Box 1020, Marlboro, Mass.**

## Rhode Island Reds.

### The General Utility Fowl of the Twentieth Century.

Our WINNINGS the PRESENT year demonstrate without a doubt that we have MORE PRIZE WINNERS than any breeeer in the country. Having won in 1900, nine firsts and sweepstakes for best male, Concord State Fair, Concord, N. H. Eight first and and second, nine entries, at Brockton Show. Two firsts and special for best R. I. Red male birdin Fall River. Six first prizes, six entries, Malden, Mass. Forty-two prizes Philadelphia, including the special offers of $50 in gold and $25 in gold; also including nine firsts and nine seconds out of a possible ten each.

**1901**

Boston Show in the hottest competition, forty-eight prizes, including four firsts, three seconds and eighteen specials. At New York, seven firsts, five seconds. Which is a result unequalled by any breeder of any variety of any fowl. If you desire to obtain stock from the very best that there is, state what you want and write us for quotations.

**HOUSE ROCK POULTRY FARM,**
**Wollaston, Mass.**

## Clover Lawn Buff Plymouth Rocks.

**FOR 1901.**

**Are Winners of More Prizes than any Buff Plymouth Rocks in Michigan.**

## HELP US GET RICH!

We want you to write us for prices on

## White Plymouth Rocks, Black Minorcas.

Our stock is second to none and our prices are low. We will **GUARANTEE** our W. P. Rock ckls. **not to turn brassy.** That shows our confidence in their pure whiteness. We are new advertisers in A. P. J. and want your trade. If you buy once you will again. We aim to please.

Please notice our new address **Mr. & Mrs. B. T. MATHEWSON, Elgin, Ill.**

**Taylor's Remarkable Record on Bronze Turkeys.**

Winning sweepstakes at Chicago's great shows three years in succession. Show birds a specialty. Stamp if convenient.

**S. H. TAYLOR, Sibley, Ill.**

President National Bronze Turkey Club. (Poultry Judge.)

## HOW WE MANAGE OUR CHICKS IN THE SOUTH.

HAVING annually produced for several years past from two to three thousand chicks and having out now something near the above number, with several hundred more eggs to hear from, will by special request tell just how we manage them away down south in Dixie. The sweet, sunny south, with its mild climate, late falls and early springs, is truly the poultryman's Paradise. Chicks can be produced the year round, for nature has been lavish in her gifts. We have no weak, delicate hothouse stock, and but little roup and other diseases. Our birds are free to roam at will through shady woods and green pastures, roosting in open, well ventilated houses. So they are healthy, strong and vigorous, happy and contented, giving the best results, and this is the one great secret of success, for chicks from such stock is half the battle fought. You may not realize the fact, but you do well in selecting and mating your birds to use only healthy, strong and vigorous stock. No matter how grand or beautiful an individual may

Feathers from single mating Barred Plymouth Rocks as bred by Geo. W. Brown, proprietor Ouachita Valley Poultry Farm, Camden, Ark.

be, if diseased cull it out, for remember this, in breeding such you are breeding trouble, and for years to come perhaps. Let vigor and utility be your foundation, and to it you may add at your pleasure feathers and beauty. In the production of our chicks we use both natural and artificial means. Yet as the majority use hens for hatching machines, will tell just how we handle them, for the successful rearing of chicks depends not only on the parent stock but the manner in which they are produced. An incubator to produce a strong, healthy batch of chicks should be run at 104 degrees; more or less heat causes weak, scrawny chicks, and why not the same apply to a hen. True, they cannot supply too much heat. Yet an unfed, lousy hen cannot successfully incubate and give chicks a running chance for life. Thousands of chicks are annually produced with death's stamp on them. Some hens are more faithful than others, and while some will come off the nest daily there are others that will starve to death. So notice and give your chicks a chance by feeding, watering, and caring for your setting hens. Dust well with in-

sect powders on first, tenth and eighteenth days of incubation, for remember the south is the very hotbed for lice and mites, which are the poultryman's worst enemy. After chicks are hatched we remove all to dry, warm quarters. Again thoroughly dusting hen and greasing the head of each chick with mercurial ointment, leaving them undisturbed for twenty-four hours, after which we begin feeding. And here we have the greatest problem known to poultry culture, for *feed and lice* have been the destruction of more chicks than all else combined. Feed a little and often, but don't overfeed or bowel trouble and death will be the results. For the first two weeks we feed five times a day; for next four weeks four times a day, using Chamberlain's perfect chick feed. Pardon us, Mr. Editor, for mentioning names, yet in behalf of the many inquiries we are constantly receiving for a good chick feed we take this opportunity of recommending what we believe to be the cheapest and best all-round chick feed ever placed on the market. We have used it exclusively for years and have raised far more and better chicks with less trouble and expense than ever before in our life. After chicks are 6 weeks old we begin feeding small grain three times a day, with a feed of green bone twice a week; when one month old we again and for the last time grease their heads, which puts them safe, as by then they are large enough to throw off the lice themselves. Of course, it is no little job greasing the heads of 2,000 or more chicks. Yet in the south it must be done if you would raise any chicks, for, notice them, if you please, there they are crying and sleeping their lives away—wings dropped, weak and poor, can't you guess the trouble? Pick one up, examine closely its head, and the mystery is solved. 'Tis head lice sapping their very life. We have lost chicks by the hundreds at from two to four weeks old. Perhaps you are losing them also. Then try our plan; it will do no harm but double the number you generally produce.

*Camden, Ark.* *G. W. Brown.*

---

One of the most remarkable but least noticed facts in connection with the war in the Transvaal is the extreme youth of a large part of General De Wet's army. When hostilities broke out almost every grown man enlisted, even the enfeebled, but the pace has been too rapid for the venerable burghers. As they were killed or incapacitated their places have gradually been taken by mere school children, many only thirteen or fourteen years of age. Under the title of "The Youngest Soldiers in the World," in the June Cosmopolitan, Allen Sangree throws more light on the make-up and life of General De Wet's commandoes than anything hitherto published. The naive, simple letter from fourteen-year-old Deneys Reitz to his father, the Secretary of State of the Transvaal Republic, has seldom been equaled for vital interest by any carefully written article on the war.

---

Never omit to keep a record of the product of the poultry-yards. A showing of what is done there is sure to make converts to poultry keeping.

---

Above the door of every poultry-house should be written this motto: "Utility is the science and beauty, the art of poultry raising."

MAJESTIC STRAIN

**White Wyandottes**

There are no handsomer, more profitable birds in the world than the White Wyandottes. My stock is farm raised from prize winners at big eastern shows. Yearling stock ready for shipment, a limited number of pullets and plenty of cockerels. **Score Cards by Judge J. Y. Bicknell.**

At Rochester, N. Y. poultry show was first on cock; first and second on hens; first and fifth on cockerels; first on pullets; first on pen, besides specials. I guarantee satisfaction in every particular.

**EGGS FOR HATCHING**

from stock scoring 93½ to 96½ points; one setting $5.00, two settings $8.00. A trio of pedigreed Belgian Hares for sale.

**C. S. Wetmore,** Box 877 **Lockport, N. Y.**

**20th Century**

Portable Hen Houses,
Roosting Coops,
Brood Coops,
Outdoor Brooders,
Rabbit Hutches.

The principal drawback in the raising of Chickens and Rabbits in the South, and for that matter, in any section of the country, has been

**LICE, MITES and FLEAS.**

It has been my aim in building these Hen Houses, Coops, Brooders and Hutches to have as few places for vermin to harbor in as possible and at the same time is easily cleaned. By the removal of a few screws in each case they can be taken down, scalded for vermin or stored away for next season's use.

Write for prices and photographs. You need them and cannot afford to be without them. Send 10c in stamps for photographs.

**SAM D. MACMILLAN,**

**1202 Twelfth street, Pine Bluff, Ark.**

**George's WHITE ROCKS.**

Stand at the head, as our record at America's largest show, **BOSTON,** proves. If you want the **BEST** and **HONEST** dealings write to

***E. H. & S. H. GEORGE, Box 31, Groveland, Mass.***

**RED GOLD--WAYNE'S GOLDEN WYANDOTTES**

Have won at Boston, New York, Hartford and other large shows. If you want to be in the win. this stock will do it for you. It is for sale—winners and all, to make room for hundreds of young chicks. A rare chance to obtain some of the best Golden in the U. S. Blue Andalusians of same quality. Eggs, balance of season, half price—$1.50 per 15. Ship in Eyrie Egg Boxes. **E. S. WAYNE, Rainbow, Conn.**

**EGGS FROM THE WINNERS.**

**JONES' WYANDOTTES**—Silver Laced, Golden and White, Golden Sebright and Silver Sebright Bantams. Eggs $3. 50 head of fine breeders after May 15. Fine litter of Scotch Collies sired by Brandane Nugget.

***R. E. JONES, Box A. Flat Rock, Ind.***

**Barred Plymouth Rocks and S. C. White Leghorns.**

Barred Plymouth Rocks (Montanks)—3 pens mated by 1st prize cocks, 92, 93, 93½ by Hewes, S. C. White Leghorns—2 pens mated with extra large size 1st prize cocks, 95 and 95½ by Pierce. Eggs from all pens $1.50 straight. My stock is bred in line and are good winter layers.

**MEDINS POULTRY FARM, FRED. A. ULRICH, Prop., Mossville, Ill.**

***EGGS! EGGS!! EGGS!!!***

We are ready to fill your order for eggs from our prize winning Stay White Plymouth Rocks and Buff Cochin Bantams. No better stock in America. Eggs $2.00 per sitting.

**J. A. BABCOCK & SON, Goshen, Ind.**

By using Fly Bouncer, at a cost of one-half cent per day each, cows will give more milk and lose no flesh during fly time; stock fatten faster and ship better without crowding and jamming each other around yards and cars. Not only keeps away flies but kill lice on hogs and stock. Safe, sure and cheap. Send for circulars, testimonials and price list.

**SPRAGUE COMMISSION CO., 218 So. Water Street, CHICAGO, ILL.**

## BELGIAN HARES.

All Hares scored at our Los Angeles Rabbitry by a National Association Belgian Hare judge, with the Crabtree score card, which is now the standard. Write us your wants. We shall be pleased to answer any inquiry. 3,000 Hares to select from. Young stock 1 to 5 months old. Stock guaranteed as represented or money refunded.

**JOHNSON & JOHNSON, 600 Bates St., St. Louis, Mo.**

Rabbitries—Los Angeles, Calif.; St. Louis, Mo.

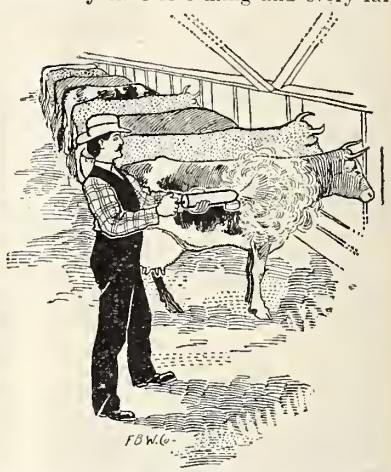
## If in need of BELGIAN HARES

We can furnish stock from all the principle strains, such as Fashoda, Bacon, Rob Roy, Edinboro, Mammoth Grey, etc., in quantities to suit and at prices from $3.00 up. Our great buck, Lord Edinboro, Jr., at stud, $10. Write us, stating your wants plainly. We will reply by return mail with full particulars.

**CENTRAL BELGIAN HARE ASSOCIATION,**
**WESTVILLE, IND.**

### FLY TIME COMING.

We are glad to call the attention of our readers to the ad of Rippley's Fly Remover which appears elsewhere in this issue. When we say that this preparation is put up and sold by Rippley Hardware Co., of Grafton, Ill., we need say no more to commend it to hundreds of our readers who have dealt with this firm in the past. Their Reliable Feed Cooker, their many excellent patterns of sprayers have been widely advertised and sold. Fly time is coming and every farmer and stock owner knows what this pest means in diminished milk flow, loss of flesh and strength, etc., on the part of cattle and horses. A very simple and effective remedy is at hand and one that is easily and quickly applied. Rippley's Fly Remover will both remove the flies, gnats and mosquitoes, and also being antiseptic is very soothing and healing. It not only drives away the cause but it allays the effect. It is best applied with the Rippley Sprayers; the hand sprayer for small herds, the 5 gal. Compressed Air Sprayer for larger. Write today for full information and mention our paper.



———o———

The Delineator for July is made especially interesting by the excellent three color work illustrations of Pan-American Exposition buildings. This magazine has been phenomenally successful in showing the artistic color results obtained at Buffalo. They have had the advantage of working direct from the original water-color sketches of C. Y. Turner, director of color to the Pan-American Exposition, and all the beautiful effects of the originals have been obtained. Other very noticeable features combine to make the Delineator for July worthy a place in the foremost rank of popular periodicals, a position which was long ago well merited. The edition for this month is 625,000 copies.

———o———

Poultry raising is a theme that should be discussed by farmers at the regular club meetings.

## Prize-Winning Belgians.

That I have a **prize-winning** strain of hares is proven by my show record at Hillsdale (Mich.) County Fair, where I won **first** on both buck and doe. Am breeding best known strains such as Lord Britian, Banbury, Yukon and others. Stock reasonable. Correspondence solicited.

## 1901 CATALOGUE OF THE AMERICAN PLYMOUTH ROCK CLUB.

The 1901 edition of the American Plymouth Rock Club catalogue is out and ready for free distribution. We are anxious that all interested parties be supplied with copy so it will be sent free for 4 cents for mailing.

The catalogue this year is of 56 pages 9x11 inches in size and contains original articles touching on every subject pertaining to Barred Plymouth Rocks contributed by breeders and judges. The ideal cuts are all shown, including the new male cut by Sewell; also showing illustrated the most famed birds of this variety. There are items for reflection and study. Taken all together it is a book of reference and value to fanciers of this variety.

The club extends to all a cordial invitation to membership. We ask you to consider the club's claim upon you as a breeder. Come with us and lend your aid in support of a worthy cause. The initiation fee is $1; dues 50 cents. Lady breeders are admitted free. Write me today. Fraternally yours.

*H. P. Schwab, Sec'y Treas.*
*Rochester, N. Y.*

## WESTERN POULTRY FANCIERS' ASSOCIATION.

For the seventh annual show of the above association to be held in Cedar Rapids, Iowa, Jan. 13-18, 1902, plans are maturing to make it the largest show ever held in Iowa. New and additional features are being worked up that will add to the attractiveness of the exhibit and induce many new exhibitors to show for the first time. The prizes will

**Reliable Breeders' Directory**
**OF THOROUGHBRED POULTRY.**

We believe all breeders whose names appear below to be thoroughly reliable and honorable, and their stock to be of superior quality. Address will be inserted in the JOURNAL for such breeders as can satisfy us upon the above points, and that their stock is thoroughbred, for $2.00 per year, payable strictly in advance. Those who breed more than one variety, can have address under other headings (after the first) for $1 for each variety.

The judges so far engaged for the year are, James A. Tucker, Concord, Mich., and Theodore Hewes, Trenton, Mo. Readers should bear in mind that the dates of entries close January 4 at midnight. Premium list will be ready for distribution on December 10, copy of which will be mailed to any one making application to the secretary.

## TO BROWN LEGHORN BREEDERS.

Friends of the American Single Comb Brown Leghorn Club will be pleased to learn that this recently hatched prodigy of poultrydom is growing most encouragingly. It has not been chilled by cold, wet spring weather, nor will it waste away during the coming hot, dry summer months. Like a vigorous, healthy young Leghorn chick, it is taking on feathers fast, with every promise of blossoming out as an attractive show specimen next fall and winter. Do you realize that the time to prepare for the show room is fast approaching? What part are you as breeder and exhibitor going to take in helping the club representative of the breed you are striving to perfect in coming events?

It is desired to start this club's show career by a good appearance in every state throughout the country. If your state is not represented don't blame any one more than yourself. The door is wide open and a sign hangs out inviting you to come in.

Now to make a good showing in a state there must be at least ten members in that state. It should be no hard task to secure that number at least. Do your part by sending in membership application at once, and then get to work and assist in pushing the club in your state, all to the good of the little Browns.

*C. M. Davidson, Sec'y.*
*Chicago Lawn, Ill.*

The Ridgewood Poultry and Pet Stock Association will hold its first annual exhibition Dec. 18, 19, 20, 21, 1901, and it is now preparing copy for a handsome forty-page premium list. They solicit the donation of special premiums and respectfully ask that all who desire to contribute to the list send in a memoranda of their contributions not later than the 1st of October. The special premiums will be catalogued in the premium list together with the name of the donor and his business. The secretary of the association is Mr. C. S. Curry, Richwood, Ohio.

***JAMES CHRISTOPHER,***

**Kickapoo Poultry Yards, Heyworth, Ill.**

A new American breed, bred by Americans, adopted by the American Poultry Association as

**Partridge Wyandottes**

Originated by **E. O. THIEM**

**13 Eggs, $3.00 .....Denison, Iowa**

We acknowledge receipt of a copy of the catalogue of the Partridge Wyandotte Club of America, Theo. Haight, secretary-treasurer, Astoria, N. Y., and we take the liberty of reproducing below the bit of verse which constitutes the "Introduction." There are some pertinent pointers in it aside from the suggestion that the Partridge Wyandotte is all right.

"If you toot your little tooter
And then lay aside your horn,
There's not a soul in ten short days
Would know that you were born.
The man who grows the chickens
Is the man who works all day;
And the man who keeps it humming
Is the man who makes it pay.
The man who writes an article
With a short and sudden jerk,
Is the man who blames the Public
Because it doesn't work.
The man who gets the business
Has a long and steady pull,
And keeps his own small order book
From year to year quite full.
He plans and writes his essays
In a thoughtful, honest way,
And keeps forever at it
Until he makes it pay.
He has faith in all the future,
Can withstand a sudden shock,
And like the man of Scripture,
Has his subject on a rock.
So surely from our little rhyme
A moral can be had,
It's to raise some Partridge Wyandottes
And they will make you glad.
They have tooted long for others
And would like to toot for you,
So come and join our little Club,
It's built for men like you.
For now the fight is over,
And we stand as friend with friend,
And we'll back the Partridge Wyandottes
From beginning to the end.
We have bred them up to feather,
And won at all the Shows,
The majority was on our side
As everybody knows."

———o———

The Arena Poultry Association will hold its First Annual Exhibition at Sterling, Ill., from December 26th to January 1st inclusive. Chas. McClave, New London, Ohio, Judge. This association is made up of progressive up-to-date fanciers, residing in Rock Falls, Sterling and the surrounding country. Some of them have captured the blue ribbons at the largest of our western shows, including Chicago and Cedar Rapids, and no better stock can be found anywhere. A splendid show is guaranteed. The co-operation of the fanciers of northern Illinois is earnestly desired. A fine list of specials is assured, and birds will be given the best of care.

*R. L. Leitch,*
*President.*

*L. A. Kline,*
*Secretary.*

———

The prospects for a great show at Middletown, Ohio, are daily growing better. The fanciers are all falling in line and working for the best interests of the association. Being located in southwestern Ohio and having excellent railroad accommodations it will prove one of the most convenient shows for fanciers located in southern Ohio, Indiana and Kentucky: With a fine show room, liberal prizes, and efficient judge, Middletown will sustain her old reputation. Write for all information to *N. O. Selby, Middletown, Ohio.*

# A LITTLE OF EVERYTHING.

*Plenty of Room for Chicks.*

I think one mistake a great many make is in using too small a coop for young chicks. A coop that is all right while they are young will get too small after they are about half grown, and nothing hurts a chick like being crowded at night. I believe a coop should be 3x4 feet and 3½ feet high for fifteen or twenty chicks after they are half grown, and the safest plan is to start in a coop large enough to hold them until removed to the henhouse. *Paul B. Harshman.*

*Sullivan, Ill.*

*Weighing Chicks.*

I began weighing a Buff Wyandotte chick at the age of two weeks and intend keeping it up until it is fully matured, weighing once a week (every Saturday). When two weeks old it weighed 3¾ ounces; three weeks old 5 ounces; four weeks old, 6½ ounces; five weeks old, 9 ounces. Next month will give a record of its gain during the last two weeks in May and the first two in June, together with my system of feeding breeders and chicks. *W. E. Ellison.*

*Georgetown, Ohio.*

*"Fertility of Eggs."*

My experience is that when I feed green clover I find the eggs to be far more fertile when the breeding stock is confined in yards. My plan for another year shall be to arrange my matings so as to allow each breeding yard to have free range on alternate days and I feel sure this will give me a larger per cent of fertile eggs, for it has proven to be the case this season as an experiment with a few hens as a trial. By following this course there would be less feather plucking and picking of combs among the non-sitting breeds and we would have less orders to replace free where satisfactory results were not obtained. Too close confinement and of long duration is not good and is the cause of so many bad traits among fancy fowls. Am speaking from experience.

*H. A. Emmel.*

*Ogle Pa.*

*Keep Your Chicks Dry.*

We have experimented along this line this spring with our little chicks. We have a large store room in the barn above the horses and we placed in this room a number of exhibition coops and in each coop we placed a hen with her chicks. At the same time we placed some hens with chicks in a brood coop outside. Those that are in the store room are much livelier—not one of the lot has any bowel trouble. Of those which we put outside we lost two and a few others have had bowel trouble. We think the success with those in the store room is due to the fact that it is quite dry. *Halbach Bros.*

*Waterford, Wis.*

*Make Your Birds Tame.*

Go quietly among the fowls and you will succeed better with the young chicks. The quiet hen will hatch better and make a better mother. I have heard it said: "Give me the hen that will fight for her chicks," but not so. She will rush about and trample her own in her excitement, so keep the hen quiet, if you would raise many chicks.

*Mrs. J. H. Orebaugh,*

*Batavia, Ohio.*

*A New One on Me.*

After twenty years' experience in breeding poultry I find there is still something to learn. I recently placed some camphor balls in the nests. There were no lice in the nests that I could find, but the camphor balls have been highly recommended and I used them as a precautionary measure. They were

Write.

**FRED J. PHELPS, Bucyrus, Ohio.**

I have sold the winners at the largest shows. They win for me; they will for you. Try them.

about the size of marbles. Some of my finest hens decided that the balls were suitable as food. The result was they were soon asleep, and I am minus their value—at least $20. Another object lesson learned. The moral is, I do not need a remedy for this trouble now. I have one. It is, no more balls.

*S. M. Williams.*

*Monroeville, Ind.*

*Buff Rocks.*

I have bred a great many varieties of fowls, but I find that the Buff Rocks are better adapted to the general wants of a farmer than any other variety that I have ever raised. I have bred Buff Rocks for the past five years and find that they possess all the good qualities of the Barred variety and when dressed for market they do not show the objectionable dark pin feathers. My experience is that poultry pays much better than cows.

*W. E. Blaisdell.*

*East Rochester, N. H..*

*Turkeys That Lay.*

It has been only a few years since people believed that there never would be the day when a fast horse could go a mile in two minutes, but now he does it. This is an example of the condition regarding our fowls. The hen lays 200 eggs and upward per year and a turkey hen is only expected to lay fifteen eggs per laying, and will probably make two layings in the year. By careful selection they can be made to lay 35 to 40 eggs before wanting to set. We have selected the best layers for use and have proven this by experience. *S. B. Johnston.*

*Boggstown, Ind.*

*When to Hatch Chicks.*

The time to hatch chicks depends upon the purpose for which you want them. For winter layers February, March and as late as April is about the proper time, but for breeding stock to produce eggs for the egg trade it is better that the birds be hatched in May or June. If hatched too early they will molt and will not lay when you want them or they will cease laying and want to set just when your orders are coming in. We find April, May and June are all good months for hatching.

*Casstown, Ohio.* *F. R. Simmons.*

*Bowel Trouble in Chicks.*

Millions of chicks die of bowel trouble. In most cases the cause is over-feeding and the same feed at every meal. Do not feed until thirty-six hours old. Feed oat meal flakes for the first meal, then when the crop is empty feed dry bread crumbs, next cracked corn, then millet and all kinds of cracked grain. Give a different food at each meal and never feed until the crops are empty. Boiled milk and milk curd may be fed every day. Free range should be given every day, and especially after the fourth day.

*John M. Sontag.*

*St. Charles, Ill.*

*Feeding Chicks Too Soon.*

We hear so many say, "Do not feed chicks too soon." The most of us need to be reminded quite often of it. We all like to see the little fellows eat, always afraid they will starve. We find that if we do not feed them until they are 72 hours old we have the strongest chicks. Try it and see for yourself. Nothing will bring bowel trouble quicker than feeding too soon. *Halbach Bros.*

*Waterford, Wis.*

## THE SHAUB COMPARTMENT BROODER.

We desire to call the attention of our readers to the Shaub Improved Brooders, manufactured by M. Q. Sherer, Louisville, Ohio. Mr. Sherer informs us that the consensus of opinion among poultrymen who have used these brooders is that they are highly and unanimously in favor of the "Shaub" as being the best brooder they have ever used. They are both indoor and outdoor brooders, and with them it is possible to successfully raise chickens in the dead of winter with as little inconvenience as in the pleasant days of summer.

We very much regret that we are often compelled to admit that the real value of a good brooder is too often underestimated.

If poultry raisers would only stop to realize that unless they are able to raise the chicks it is useless to hatch them the question of a good brooder would come in for its share of consideration.

Any one interested or who contemplates purchasing a brooder would do well to write Mr. Sherer direct.

U. R. Fishel, of Hope, Ind., the White Plymouth Rock breeder, has a new ad in this issue that will be of especial importance to A. P. J. readers. Mr. Fishel has recently moved on to his new 120 acre farm and is devoting his time to raising White Plymouth Rocks, which for years have been a specialty with him. The breeding season is now over and Mr. Fishel is making special bargains to reduce his stock to make way for his growing stock. He has over three hundred select breeders and a buyer can find in this lot about any description of stock that he requires in his own yards. It is almost unnecessary to again speak of Mr. Fishel's winnings at the leading shows. He has been a persistent and successful winner and by a liberal use of printers' ink has kept this before the reader in an attractive and convincing way. Mr. Fishel says that if you wish "the best in the world" in White Rocks, the big kind, to write to him. His 24 page catalogue in addition to describing his stock tells how to mate and breed winners, how to feed stock and care for it in every way. To those interested in Fox Terriers and White and Black Belgian Hares, it will be of value to write to Mr. Fishel.

H. E. Bates, Galesburg, Ill., has a change of ad in this issue and is offering for sale some very choice February and March hatched youngsters, which will be in fine shape for the early fairs and shows. By purchasing the youngsters at this age they can be obtained at a much cheaper price than if bought later on and Mr. Bates guarantees satisfaction.

Mr. H. A. Emmel, Ogle, Pa., breeder of Light Brahmas and Single Comb Brown Leghorns, has a change of ad this month. He informs us that the demand for eggs has been greater this season than ever before, and he has been compelled to refuse quite a number of orders for eggs from his winning birds. He has the finest lot of youngsters which he has ever raised, and will have a large number ready for the fall trade. He guarantees to give satisfaction or refund the money, and will not misrepresent his stock.

# Questions and Answers.

Our Subscribers are invited to make use of this department whenever we can be of service to them. All questions are answered in the order in which they are received. If your question is not answered in this number, look for it next month.

*Editor American Poultry Journal:*

DEAR SIR: I wish to take advantage of your "Questions and Answers" department and would like to know if eggs which have been set two weeks will be affected by being rained upon.

*Strawn, Ill.* *A. N.*

If exposed to a cold rain they will of course be injured. You do not state how long they were unprotected nor whether the rain was a mild or hard one. In any event, the chances of a hatch are very unfavorable.

*Editor American Poultry Journal:*

DEAR SIR: I have a Plymouth Rock hen whose intestines protrude two or three inches from the vent. Please give me the cause and cure. Also give me the address of the West Virginia Agricultural Experiment Station. *P. R.*

*Coryville, Pa.*

The trouble is "prolapsus of the oviduct" and is caused by strenuous and repeated efforts to expel an egg. The parts should be cleansed with warm water, anointed with carbolized oil or vaselene and replaced with gentle pressure. Keep the bird in a small coop by itself. Give Epsom salts 20 grains and bicarbonate of soda 2 grains once a day. Give in addition to the above, 4 drops fluid extract of ergot which will have the effect of contracting the oviduct and keeping it in position. Successful treatment of this disease depends upon prompt treatment when the trouble first occurs.

The West Virginia Agricultural Experiment Station is located at Morgantown, W. Va. Prof. Jas. H. Stewart, Director.

*Editor American Poultry Journal:*

DEAR SIR: Is there a poultry school in the country or are these experimental stations simply government institutions?

Where are the best experiment stations with reference to poultry experiments in the eastern portion of the United States and do they take scholars?

Do you think it advisable for a young man who would like to learn the scientific and money-making principles of breeding poultry for the market, etc., to enter one of these schools?

How long a course would be required to learn the business well enough to start in it in the proper way?

I hope I have not asked too many questions but I am interested in this matter and know of no better source of information and will be thankful for an answer. *E. H. R.*

*Westhampton Beach, N. Y.*

The various experiment stations are state institutions. The only one you could enter as a student is the Rhode Island Agricultural College, located at Kingston, R. I. Prof. A. A. Brigham is the Director and upon request will give you full information in regard to the cost of a course of instruction and the time required to complete it. Your own state has a very efficient station at Geneva but poultry is not given the attention necessary to make the department valuable as a school. We think you would do well to take a course at the Rhode Island College and then secure a position on some practical and paying plant.

*Editor American Poultry Journal:*

DEAR SIR: At present I have only common chickens. What kind of thoroughbreds would you recommend for general purposes and how many will a yard fifty by sixty feet accommodate?

*Las Vegas, N. M.* *F. M. B.*

It is very generally believed that the several varieties of the Plymouth Rock and Wyandotte families are the best general purpose fowls. They are a medium between the large and small breeds and seem to be the favorites with breeders who sell poultry and eggs for market purposes. The Rhode Island Red and the Buff Orpington are also in the same class but are not standard breeds. The fowl which is absolutely the best has not yet had this quality clearly demonstrated to the satisfaction of unprejudiced persons. In egg production particularly, any variety is just what you make it by careful selection and the breeding of the best layers in the flock and other desirable general purpose qualities may be intensified in the same manner. We would advise you to select the breed which best suits your tastes from a fancy standpoint.

*Editor America Poultry Journal:*

DEAR SIR: Will you kindly advise me what to do for young chicks that do not seem to have any disease but droop their wings and die very suddenly? They do not have lice nor bowel trouble, and I am sure have not been overfed or fed improper food. They were hatched in an incubator and were a long time hatching after the eggs were pipped. Could you tell me the cause of that? *L. E. B.*

*Cheshire, Ohio.*

We do not know what could be the matter with your chicks if, as you say, they do not seem to have any disease and are not troubled with lice. You certainly have not examined them carefully. Not knowing anything about the surroundings, methods of feeding, we are unable to suggest a remedy. The fact that the chicks were a long time hatching after the shells were pipped would indicate that something was wrong with the temperature in the incubator or perhaps the parent stock was not in best condition, as regards vitality, etc., and was, therefore, unable to produce strong, healthy offspring. We would advise you to examine the heads of your chicks very carefully for lice, and if you find any, grease the head lightly with lard.

*Editor Poultry Journal:*

DEAR SIR: Can you tell what is the matter with little chicks that bloat? The bloating seems to be of the skin only, as if there was air under it. Two years ago I had one. I did nothing for it and it got better in time, but did not grow very fast. This morning I

have another. It was so bloated that it could not use one leg. I pricked it and the bloating nearly disappeared and it could walk immediately. What is the best thing to be done? *J. R.*

*Cashton, Wis.*

We have never seen a satisfactory explanation of the cause of the trouble you mention. This accumulation of wind under the skin of chicks seems to be more prevalent amongst those that are backward in feathering. There is nothing to be done except to prick the skin and let the air or gas escape. If it forms again, it would be well to cut a small portion of the skin with a pair of scissors and anoint the place with vaselene.

---

*Editor American Poultry Journal:*

DEAR SIR: Being a subscriber to your paper I thought I would write and ask the question, *"Does it pay to cross pure bred poultry?"* I have been raising Silver Laced Wyandottes for the past six (6) years and must say that I am in love with the Wyandottes more than any other breed, but for the past two or three years my hens have not laid as many eggs as they ought to. And I have been thinking some of crossing them with some other breed. Now I would like a little advice from some of the readers of your paper. I have given my fowls good care (my wife often says chickens first, the children and myself afterward). I feed corn, oats, bran and middlings, cut bone with plenty of grit and oyster shell and lots of table scraps. Now I want to know why they don't lay. Two years ago my cousin crossed some Buff Leghorn hens with a Buff Rock Cock. He came to see me a few days ago and told me he never had hens lay like they have the past winter. He gave me the number of eggs laid (while cooped up in a house 8 feet by 10 feet, with no scratching shed, and as he said, no fancy feeds) by twenty-five hens as follows:

December, 197; January, 297; February, 442; March, 456; April, 442; total, 1,834.

Now I think the above number of eggs a pretty good record for this northern climate, where poultry are buried in snow six months of the year.

*South Lake Linden, Mich.* *C. C.*

We do not advise the crossing of Standard bred birds. There is absolutely nothing to be gained by it. There are no characteristics possessed by the cross bred birds that are not found in some variety of the pure bred fowl. The progeny of cross bred birds present a mongrel appearance and are not nearly so handsome and attractive as a flock of uniform color and shape. The fact that your cousin's cross bred birds laid a large number of eggs is not an argument in favor of the cross bred bird. It is merely evidence that the birds were properly fed and cared for. Although this record is an exceptionally good one, you will find it more than duplicated with hundreds of pure bred birds and, if your own Wyandottes had been under your cousin's care, they might have laid more eggs than they did for you. We suspect that your method of feeding is responsible for the small egg production of your flock. From the tone of your letter we are inclined to believe that you give your birds too much care. You create the impression that they are overfed. We note especially that they are given lots of table scraps. A little of this kind of food is all right, but too much is detrimental. You should see that your birds are in the best laying condition and not overfat.

---

*Editor American Poultry Journal:*

DEAR SIR: Wish you would please answer me the following questions in the next issue of your valuable paper. Can I keep ten breeding fowls in a roosting room 6x6 and a scratching shed 6x6 and 30x12 feet run. What is the best scratching shed to be used in central Illinois, open or closed. Is, or is not, the poultry business somewhat overdone?

I would like to see the overweight question settled in favor of standard weight. *T. K.*

*Pekin, Ill.*

You can keep ten fowls in the amount of space you mention. It would be better, however, for the roosting room and scratching shed to be made into one large apartment. We would advise you to use the open scratching shed in your locality, but it would be better to have it arranged with curtains or a movable front, so that it could be closed in extremely cold weather. This is especially advisable in your case, as your roosting room is so small and entirely too small for the ten birds, when the weather is such that they cannot make use of the scratching shed. In reply to your inquiry, as to whether the poultry business is overdone, will say that there are thousands of people ready and anxious to pay their money for the right kind of stock and eggs, and the breeders who are producing the right kind have no trouble whatever, in disposing of their surplus. This is a well known fact. The production of poor grade stuff, undoubtedly, exceeds the demand, but as in everything else there is plenty of room at the top.

---

*Editor American Poultry Journal:*

DEAR SIR: Some three or four weeks age one of my Plymouth Rock pullets had some trouble in getting rid of an egg. When I fed them in the morning I noticed something wrong with her and kept watch of her during the day. My first thought was that an egg had broken inside, but on going to the hen house about noon I discovered that she had squeezed an egg out but it was covered with the lining and only a small part of the shell in sight, probably about the size of my thumb nail; she was straining hard and I tried to help her out of the difficulty, but soon discovered that the opening was too small to admit of the passage of the egg. I left her for several hours and when I visited the hen house again towards night she had got tired out and ceased straining and the egg had gone back out of sight. I decided that something must be done at once and this is what I did: By pressing on the outside with my fingers I succeeded in pressing the egg out; then with a sharp knife I made a little cut in the edge of the skin, enlarging the opening slightly and releasing the egg which was a little under normal size. There was no bleeding and she has been perfectly healthy ever since. I have described the case to several poultry men, but none of them ever heard of a case of the kind. I am a novice in the poultry business and would like the opinion of some poultryman of more experience, as to the cause of the trouble and whether the operation described was proper.

*Jackson, Pa.* *H. M. R.*

in laying, which is quite common when young birds begin to lay. Your operation was wholly unnecessary, and the fact that there was no bleeding is evidence that the cut was not of sufficient size to, in itself, remedy the evil. In cases of this kind it is well to apply and inject a small quantity of sweet oil.

*Editor American Poultry Journal:*

DEAR SIR: Will you kindly tell me what I can do for my Barred Rock hen. May 1st she hatched a brood of seven chicks (from eleven eggs), was able to be around with them for two days and then seemed unable to walk easily, getting worse rapidly so that in two or three days more she could not stand up. We took the chicks from her and used carbolized vaselene and fearing she was too fat, gave her a little corn bread, bread and milk and screenings. She has had a hearty appetite all the time, and has been laying for about fifteen days, sometimes every day but frequently skipping a day. Seems perfectly well with the one exception. Is separated from the others, comes and goes to her box and uses her wings to help herself around. Sings happily every day; is able to raise herself up a little and seems much brighter when the weather is warm. As she is quite valuable in regard to markings etc., I dislike to kill her. I enclose postage and wish to know if I may have a reply by mail, as it will be some time before our next copy of the AMERICAN POULTRY JOURNAL will be received. We read each copy with much pleasure and profit, and as new beginners it has enabled us to raise (so far), from six hens fifty-five nice chickens, which I would not hesitate to compare with any of like age. We have not lost any since they left the nest, so feel we have much to thank the JOURNAL for. I must add that the hen spoken of drinks a great deal of water. She is 2 years old.

*Plainwell, Mich.* *E. D. T.*

Your hen is either suffering with leg weakness or rheumatism. The former, however, in the case of old birds, is usually of rheumatic nature. We would suggest that you examine the birds' feet to see if they are bruised or if the joints of the legs are inflamed. If either of these conditions is found, it will be well to apply a good liniment. Give the bird cooling food, such as bran, rice, green feed, skim milk, etc. Avoid stimulating rations of all kinds. Give five grains bicarbonate of soda daily in the drinking water. If the bird is seriously affected with rheumatism, it would be better to kill her than to treat her.

*Editor American Poultry Journal:*

DEAR SIR: I have a turkey tom that has stood around in the yards all summer, having something the matter with his crop. He jerks it up as though trying to throw something from it. At times he refuses to eat. I have examined his mouth and throat and find nothing wrong. Can you inform me what the trouble is and what the proper remedy would be?

*Charleston, Ill.* *Mrs. H. G.*

The symptoms indicate that the bird is troubled with "crop bound." Place him in a coop where he can have access to plenty of water, but keep feed away from him for twenty-four hours, at the end of which time examine his crop and ascertain if it contains a hard lump. You will probably find that it does. It

should be softened if possible by pouring warm water down the throat and kneading the crop gently. If the hardened contents cannot be softened and made to pass through the crop by this treatment you will have to cut the crop and clean it out. Pluck the feathers from around it and with a very sharp knife make an incision in the outer skin about two or three inches in length. Draw the crop to one side, make an incision in it and press the contents through the opening. Wash the crop with clean, warm water, using some kind of antiseptic if at hand. Sew the cuts with silk thread and feed sparingly of soft food only for a few days, giving little or no water to drink. In cutting the crop see that it is drawn to one side in order that when in its natural position the cut will not be immediately under the one in the outer skin.

---

*Editor American Poultry Journal:*

DEAR SIR: Can you tell me where I can get Rose Comb Barred Plymouth Rocks? I see a great many advertisements of Barred Plymouth Rocks in A. P. J., but they do not mention the kind of comb. I would like to get some of the Rose Comb variety, if I can find any. *S. P.*

*St. Johns, Mich.*

We do not know where you can obtain Rose Comb Barred Plymouth Rocks. We never saw Barred Rocks with rose combs. You may be able to find some of the Pea Comb variety, but we do not know to whom to refer you for them. They were never very popular and were dropped from the Standard some time ago.

---

*Editor American Poultry Journal:*

DEAR SIR: I had a hen with a flock of little ones and she became almost suddenly afflicted with some disease that caused her to run round and round and draw her head almost square around. We separated her from her chicks, but she kept this up almost all the time for three days before she began to get better, she finally got well. What was the trouble with her, and what should have been done for her? *S.*

*Surry County, N. C.*

Your hen had an attack of congestion of the brain. It is brought on at times by fright or indigestion, and is frequently found in overfat birds. It is also found in connection with irritation of the intestines by parasitic worms. A blow upon the head will generally result in this disease and exposure to the hot rays of the sun for an unusually long time is almost certain to cause it. For treatment, apply cold water or ice to the head until it is thoroughly cooled. Give two teaspoonfuls of castor oil. Confine the bird in a cool, quiet place. If this treatment is not sufficient, give three grains of bromide of potassium three times a day, dissolved in a tablespoonful of water. If the bird is troubled with worms administer the proper remedies.

---

*Editor American Poultry Journal:*

DEAR SIR: I have a question that I would like to have you answer. I am breeding Light Brahmas and am having trouble with the eggs hatching. They are fertile but the shells are so thick that the chicks cannot pick through them. Can you tell me the cause?

*Polk, Pa.* *H. G. M.*

We think there must be other reasons, than the thickness of the shells, for the failure of the chicks to break through. This might be the case with a few eggs and especially with Brahmas, but the entire lot of eggs from a flock would hardly be thus affected. It may be that the parent stock is not sufficiently vigorous and healthy to produce eggs with good strong germs. Sprinkle the eggs with warm water two or three times during the last stages of the hatch. This has a tendency to rot the shell and make it easier to break.

---

*Editor American Poultry Journal:*

DEAR SIR: Will you kindly tell me through your columns a cure for both small chicks and old fowls that have their crops swell up and fill with a watery substance similar to the white of an egg. Last fall I lost several hens with this disease, and now it is among my two weeks' old brooder chicks. They simply mope around for two or three days, then die. Also will you please give me a cure for bowel trouble in small chicks? I have 450 Single Comb White Leghorn chicks and cannot afford to lose them. Kindly give me a remedy for both diseases and also what the cause is. *Mrs. C. H. W.*

*Milwaukee, Wis.*

The symptoms of the first disease you mention indicates that it is catarrh of the crop. This may be caused by irregular feeding and by too much food being given at one time. The crop becomes abnormally distended. The muscular coat is partially paralyzed, which interferes with the secretion of the glands. Congestion of the internal coat takes place, which results in decomposition or fermentation of the contents. Catarrh of the crop may also result from the presence of animal parasites. The birds should be confined in a clean, dry pen. The crop should be emptied of its irritating contents by pressing the outside, holding the bird with head downward. After the crop has been emptied give two grains of sub-nitrate of bismuth and one-half grain of bicarbonate of soda in a teaspoonful of water. The bird should be kept wtihout food for about eighteen hours and then fed small quantities of soft, easily digested material. It will be found advantageous to administer a grain of quinine morning and night for two or three days. You will find quite a lengthy article upon bowel trouble in chicks in the June number. You should read this without fail. You will also find a remedy for bowel trouble on page 428 of the May number. You will note that one reader states in this department this month that he saved several chicks with this remedy.

---

*Editor American Poultry Journal:*

DEAR SIR: Can you tell me through your JOURNAL what the best feed is for young chicks? Would also like to know what is the matter with one of my White Plymouth Rock hens. Two weeks ago she became afflicted with some disease and she could not stand on her feet. She would stagger around and fall over. Her appetite was good. After she died I dissected her and found that the liver had broken into small pieces; her heart was as large as two ordinary ones. Last fall I lost about twenty of my four months' old pullets. They would droop around for a week or two and then die. I thought my hen house was to some extent responsible for the trouble. It is

**G. C. FLEGEL & SON, Westville, Ind.**

8x20 feet, 6 feet high with double floor with boards running up and down on the outside battened. It has a painted, tarred roof with heavy paper on the inside and then one-half inch boards over that. Has two double windows in the front, one large door and two small doors and no ventilation. Was the house too close for them? I have my incubator filled with fifty eggs, also have two hens setting; one with fourteen eggs and the other with seventeen. I have a good large brooder, in which to place the chicks when they come off. Would you advise placing them in the brooder as soon as they leave the shell.

*Binghamton, N. Y.* *A. J. L.*

If you will look over the May and June issues of AMERICAN POULTRY JOURNAL, you will find several bills of fare for young chicks. See the article in the June number by John M. Sontag. Your White Rock hen seems to have congestion of the liver and enlargement of the heart, a peculiar combination, however, to be found in one bird. The former is generally caused by too close confinement with lack of exercise in connection with over-feeding. It may also be caused by the birds eating moldy or tainted food or from obstruction to the circulation of blood by disease of the heart or lungs. There is little to be gained by treatment. The disease should be prevented by proper care and feeding. Enlargement of the heart is another disease, which it does not pay to attempt to treat. If the windows and doors in your hen house were very tight and kept closed very much, it is very probable that the birds did not have sufficient ventilation. Your house may also have been damp or you may have had too many birds confined in it. Would advise placing the chicks in the brooder as soon as they leave the shell. If you understand operating the brooder and have a good one, you can raise more chicks and they will be just as good in every way than you can with a hen.

---

*Editor American Poultry Journal:*

DEAR SIR: Will you kindly tell me through the AMERICAN POULTRY JOURNAL what ails my little chickens? They were hatched in an incubator and seemed as lively as could be for about a week, when their eyes swelled shut and in two or three days they died. Can you give me a cure? *A. S.*

In the absence of more information we can only guess at the trouble. If the eyes of the chicks are swollen shut they may have taken cold, in which case they have bowel trouble also. If they simply close their eyes and "sleep themselves to death" the cause is probably head lice, and their heads should be greased lightly with lard.

**BARRED PLYMOUTHS Winners Again** at Kalamazoo, Mich., Dec. 24-28, 1900, Bridge judge, we won 1st, 2d and 3d cockerel, score 92½ each; 1st pullet, 94½; 3d hen, 93½; 3d breeding pen, 186¼, 86 birds in class. Eggs $2 per 15. Some choice young stock for sale. Write for prices.

# Classified Ads.

Under this heading ads will be inserted for three cents per word each month. Numbers and initials count as words. All ads will be classified under their proper headings, thus enabling the buyer to readily find the breed he wishes to purchase. No ad accepted for less than 50c per insertion. Terms, cash with each ad. Count the words carefully to avoid delay in publishing. Copy for classified ads should reach us by 19th of month preceding date of issue. Write your copy plainly, as upon this the correctness of your ads largely depends. AMERICAN POULTRY JOURNAL is furnished every advertiser during the time his ad is running. **Thirty thousand per month.** We guarantee an average monthly circulation of 30,000 copies of AMERICAN POULTRY JOURNAL. When placing your ads remember that advertisers of classified ads get better returns from AMERICAN POULTRY JOURNAL than from any other poultry journal—none excepted.

***On writing any of these advertisers mention A. P. J. It helps you and doesn't hurt us.***

***All Copy for Classified Ads Must Reach us by the 19th of the month.***

**Invincible Wedge Plate Hammers**

do not have broken handles or loose heads. Three styles,
No. 11⅛—Bell Face, Adze Eye.
No. 1⅛—Plain Face Adze Eye,
No. 1—Plain Face Adze Eye.

Ask your hardware dealer for it or send 75 cents coin or stamps to

WALLIS, ROBINSON & CO.,
46 Lake St. Chicago, Ill.

**ROUP CURE GUARANTEED, ROUP**

**CONKEY'S ROUP CURE** is the only positively known remedy that will cure roup in all its forms as long as the fowl can see to drink. Simply put the cure in drinking water and the fowl takes its own medicine. **For Canker,** especially in pigeons, it excels all others. One 50 ct, package makes 25 gallons of medicine. Directions with every package. If it fails to cure, we refund the money. Postpaid, small size 50c; large size $1.00.

**Conkey's Louse Killer** never fails to kill. Try it; 25c per package and 15c extra for postage.

**CONKEY'S POULTRY TONIC** will keep your fowls in perfect health and make your hens lay eggs in winter. 25c per package and 15c extra for postage.

**AGENTS WANTED.** G. E. CONKEY & CO., Cleveland, Ohio. Eastern wholesale office, No. 8 Park Place, New York City. Pacific Coast agents, Petaluma Incubator Co., Petaluma, Calif. For sale by all Poultry Supply Houses. Do not send stamps.

**MILLER'S BARRED ROCKS**

**Those Light Cockerels are All Sold,**

BUT CAN FURNISH

**A LIMITED NUMBER OF EGGS**

that will produce more of them. Write for my list of matings for 1901. Eggs from these pens will produce chicks that will surely please you. A number of choice breeders for sale now, at reasonable prices.

FRANK MILLER, Box A, Crestline, Ohio.

**Now Is the Time You Want Eggs!**

By feeding your fowls a little

**Banner Egg Food and Tonic**

your hens will lay lots of eggs, and you can double your profits, as this is the season of the year when fresh laid eggs are scarce.

Remember this TONIC does not force your hens to lay, it only brings them up to the pink of condition, which is necessary for egg production.

To those who have never used it, we simply ask you to give it a trial, and be convinced.

Prices: 1 lb. can 25c, by mail 40c; 5 cans $1 on board express in New York.

Our immense illustrated Poultry Supply Catalogue, FREE.

***Excelsior Wire & Poultry Supply Co.,***

**Line Bred**

**Barred Ply. Rocks, White Wyandottes and Bronze Turkeys.**

**A SPECIALTY FOR 19 YEARS.**

Also a breeder of up-to-date Pedigreed Belgian Hares for 14 years.

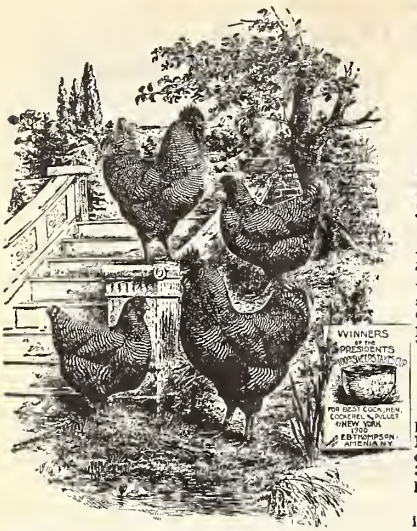
Eggs for hatching, $3.00 per 15; $5.00 per 30 of Rocks and White Wyandottes. No Turkey eggs for sale.

D. J. KOHLI, Lock Box 588, Bluffton, Ohio.

**JUST THINK OF IT!**

For the balance of the season we are going to offer, honestly and truly, the one grand chance of a lifetime to get the very choicest and best line-bred prize stock and eggs. So just for your own sake we urge you not to let this chance slip. We have 40 choice select breeding pens, and from these pens we are going to select and mate up only two pens each of our specialties, which will contain the very cream of all our most noted prize birds, scoring from 94 to 96 points, from which we will furnish eggs at $3, or two sittings for $5. All other choice breeders we are going to close out, to make room, at from $2 to $3. Brother, you may hunt the world over, but never again will you find such a bargain in Barred Rocks, Silver Wyandottes, I. Games, Buff Cochins, Light Brahmas, Pit Games, Pekin Ducks, Wild and Bronze Turkeys. Don't wait, send now.

***OUACHITA VALLEY POULTRY FARM, G. W. BROWN, Prop., Camden, Ark.***



Winners of the President's $100 Sweepstakes Cup for best cock, ckl., hen and pullet at New York, 1900.

# THE "RINGLETS" Soar Still Higher

***at New York the world's record of***

## E. B. THOMPSON'S BARRED P. ROCKS

**Four Years in Succession** was the most remarkable ever achieved in the realm of poultry exhibitions. This record is by many points the highest ever accomplished in the **Annals of the New York Show, winning, during four years in succession more than three time as many first prizes** as any other exhibitor, and as many **First Prizes as ALL Competitors Combined, Twice as many Cups and Specials** as all, including the **Superb Challenge Trophy**, value $100, for best cock, ckl., hen, pullet and exhibition pen. **$100** Silver Cup for the finest exhibit; **Grand Special Prize** Sweepstakes Cup value $100, presented by the President for the best Plymouth Rock cock, ckl., hen and pullet, **any variety.**

### *MY CLEAN SWEEP*

***1st, 2d, 3d, 4th and 5th PRIZES ON PULLETS***

has never been approached in Madison Square Garden, and stands **alone and unequalled. The "Ringlets"** also holds the **World's Record** of 1st on Exhibition Pen **at New York three years in succession.** With their 1900 record the **"Ringlets"** have won at **New York** a grand total of **77 prizes, 31** of these are **1st and Specials,** being **17 more 1st and Special Prizes** than won by any competitor in the history of the show.

### GRAND STOCK FOR SALE,

In any number. **600 Choice Breeding Cockerels. RARE BARGAINS in Yearling Breeders. Show Birds Fit to Win in the Fastest Company. Eggs** from **Finest Exhibition Matings,** one sitting **$5**; two sittings, **$9**; three sittings, **$12**; four sittings, **$15. Richly Illustrated 24-Page Catalogue** on application. It is full of original illustrations and New York winners from life.

---

## Bailey's Brown Leghorns,

### Barred Plymouth Rocks and White Wyandottes.

Prize winners for 20 years. They are not the sore kind, but the kind that soar high in the estimation of our customers. They are the scratching kind—are scratching off blue ribbons every season. You'll not kick. The multitude of chicks we hatch do the kicking as they come out of the shell. We stop all kicks on your part. Eggs $2 for 15; $3 for 30. Address

**J. A. BAILEY,**
**738 14th Street,**
**DENVER, COLO.**

---

## Barred Plymouth Rocks.

Winners at Indianapolis and Danville, Ill., with the following scores: Cock 91½; hens 93½, 93½, 93, 93; cockerels, 93½, 93½, 93, 93, 92½; pullets, 94¼; 94, 94, 93¾, 93½. At the great Columbus, Ohio, Show, I won 1st on cockerel, 1st on breeding pen (tied on 1st pullet), and Silver Cup for highest scoring male and female.

**Eggs $3 per 15 from Same Yards I Breed From.**

**DANIEL CHRISTIAN,**
**Huntington, Ind.**

---

## MATTESON HAS Just What You are Looking For

The right kind of stock at the right prices. Leghorns—Single-comb White, Buff, Black and Rose-comb Browns. Wyandottes—Golden and Black; Barred Rocks, Partridge Cochins, Game Bantams, Pekin Bantams, Rouen Ducks and White China Geese. Also Scotch Collie Dogs—the poultrymen's dog. We win with our birds each season. Have won this year at Upper Sandusky. Carey, Bucyrus and Sycamore—all good Ohio shows. Special bargains in cockerels and eggs now.

**IRA T. MATTESON, Upper Sandusky, Ohio.**

# BLACK MINORCAS

Winners of Silver cup St. Paul, general sweepstakes Kansas City, 1900; all firsts at Minnesota State Fair, '99 and 1900. B. P. Rocks that are all right. Stock and eggs in season.
Member Black Minorca Club.

**C. N. BLISS, 1613 Queen ave. N., Minneapolis, Minn.**

# NORTHUP'S MINORCA SINGLE AND ROSE COMB.

**EGGS GUARANTEED TO HATCH,** regardless of distance. Fowls successfully exported to all parts of the world. **LARGE CATALOGUE FREE.** 68 page book, "Minorcas All Varieties," history, mating, fitting for show, etc., fully illustrated, 25c. My Minorcas have never lost a special for large size, and have won more prizes for my customers in strong competition, New York, Boston, Washington and other leading shows, than any other four strains combined, which proves the quality of stock I sell.

**GEO. H. NORTHUP, Box 231, Raceville, Wash. Co., N. Y.**

# Epperson's Barred Ply. Rocks

Are big boned, large bodied, well barred, and, above all, great layers. 100 breeders to sell at one-half their value. Can furnish cockerels and pullets for fall fairs or winter shows. Or can furnish breeding pens mated up for best results. Give me your order, I will either please you or return your money.
I breed Barred Plymouth Rocks exclusively. My birds are farm-raised. Farm three miles from the city. Reference—Champaign National Bank.

**E. H. EPPERSON,**
**Box 226, Champaign, Champaign Co., Ill.**

# Winslow's Barred Rocks.

Up to Date. — Orders Booked for Fall Delivery. Cockerels $2 to $5. Pullets $1.50 up. — Great Layers.

**A. P. WINSLOW, Box 223x, Freeport, Maine.**

# Wyandotte Sale New York Winners.

We offer 200 of our Golden and White Wyandottes at greatly reduced prices for the next 60 days. These are right out of our this years breeding pens, and such a rare chance is seldom offered. These include many of our New York winners and many other winners, every bird a fine one. Don't miss this. Eggs the balance of the season from our fine matings $1.50 per sitting straight. We have a lot of fine Belgian Hares, all imported stock, at very low prices. Large circular.

**IRA C. KELLER, Box 75, Prospect, Ohio.**

**THE LIFE OF THE INCUBATOR CHICK** depends upon the care given after it leaves the incubator. It is therefore necessary that you use a first-class brooder. You get this in the **WABASH BROODER,** simple in construction, built on honor, and will rear to a healthy maturity a greater portion of chicks than any other brooder made. Zero weather, a snow or thunder storm will not interfere with the healthy growth of your chicks if you use a **WABASH** brooder.

This Brooder is sold under a positive guarantee to be the equal of any made, and if it is not as represented in every respect your money will be refunded. Price $7.00.

**G. C. FLEGEL, Westville, Ind.**

# ROUP. COLDS. ROUP.

**AMERICAN ROUP CURE** is the cheapest and best cure for colds, roup and canker in fowls or pigeons. Simply put it in the drinking water, and they take their own medicine. One box makes 20 gallons of medicine. If it fails to cure we refund the money. Price, 25c per box postpaid. **FOR, CHOLERA, DIARRHŒA and all BOWEL DISEASES,** the American Chicken Cholera Cure will effect a speedy cure. Price 25c per box, postpaid. Keep these two excellent remedies constantly on hand for immediate use, and you will not lose a bird. Please do not send stamps.

**AMERICAN POULTRY REMEDY CO., Dept. B, 48 Cortlandt st., New York City.**

***J. K. PAGE, Prop., - - - Indianola, Ill.***

**Bonniwell's Buff Rocks**
Still holds the record at the great St. Paul Show. Winnings this season were 1st, 2d and 3d hen, 2d cockerel, 1st pullet, 1st pen, best cock and best display. The class was big and quality the best. My first hen scored 94¼. I have a limited number of eggs for sale from best birds. They are large, well-shaped birds with good combs, and are the proper shade of Buff. Burdick's Nugget Strain.
H. H. BONNIWELL, Box 395, Hutchinson, Minn.

**BARRED ROCKS.**
**FELCH'S VERDICT** was that my first prize cockerel at the Indiana Poultry Association Show was the best Barred Rock cockerel he scored last season. He reached the remarkable score of 94 points. **I have many other birds in my breeding yards just as good as he is.** Some of these are now for sale at reasonable prices. My entire exhibit at the Kentucky State Poultry Show scored from 92¼ to 93¾. Eggs after May 15 at the reduced price of $2.50 per sitting.

## WYANDOTTES—Black, Yellow or White? WHITE, of Course.

Every one knows I handle nothing but White Wyandottes. Eggs from best selected matings, $3.00 per sitting; $5.50 two sittings; $10.00 three sittings. Incubator eggs from fine stock, $6.00 per 100. Send for illustrated circular, describing pens.

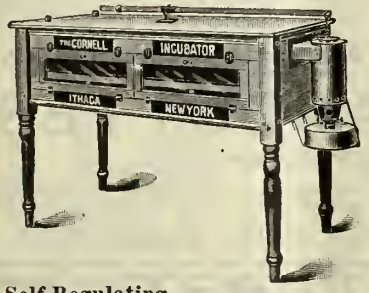
**HICKORY GROVE PLACE,**
**F. C. WILCOX, Prop., Joliet, Ill.**

## Want to Win on Silver Wyandottes NEXT SEASON?

You can do it by sending me your order now for eggs from my prize winners. They are line bred and the eggs will not disappoint you. I have won more prizes during the last four years at the Illinois State, Indiana State and Chicago Shows than any Wyandotte breeder in the country. My birds score as high as 94 by prominent judges. I have a phenomenal English cock bird mated to some elegant open laced pullets, and expect grand results from this mating. Eggs $3 per 15; $5 per 30. Mention A. P. J.

**MRS. GEO. M. HANLEY, Hoopeston, Ill.**

## Cornell Incubators and Brooders



are the latest and most modern inventions for artificial hatching and rearing chickens.

The great superiority of the Cornell Incubators and Brooders is due to the regulation of ventilation and heating.

No fowl air or poisonous gases can accumulate in the egg chamber to poison or destroy the germ as in the case of nearly all other makes.

Our new improved Brooders are also automatically heated and ventilated. You can keep the heat at a constant temperature, with no cold corners nor hot spots in which the chicks will crowd.

Send for free descriptive catalogue. If the machines do not please you send them back. We will refund the money.

**Buy the Cornell and Get the Best Hot-Air Incubator & Brooder ever put on the market.**

Write to-day.

Self-Regulating,

# SELECTION.

**The Egg-Type Hen—The Effects of Confinement and Free Range—How to Select the Best Layers—The Principles of Breeding and a Discussion of Some of the Elements of Success—By J. E. Taylor.**

THE full import and importance of this subject is too often lost sight of in the mad scramble to produce large crops, that we may fill extensive and numerous orders. In fact, our very necessities sometimes compel us to admit to our breeding flocks individuals of which there is much to disapprove.

This is especially true of one who follows the work as a principal and not as an incidental avocation.

Other things being equal, he will succeed best who selects with the most exacting precision only those specimens that strictly conform to the type that most uniformly displays the qualities required.

It is a moot question whether there is an egg type of hen or not. It is sufficient to claim facts. Some breeds lay better than others, some families of the same breed lay better than the average and individuals of the family excel all others, and while no man may as yet have observed closely enough to designate the laying form, no observing care taker of fowls has failed to note the laying temperament.

And as throughout animal life external form and feature is an index to internal function and quality, it is safe to reason in this case, even by analogy. There is an egg form, and I doubt not there are hundreds of men who believe they have discovered it. Without disputing or confirming this it is safe to say the extremes of form between the layer and nonlayer are commonly recognized; yet it is indescribable to most if not all of us. Herein lies a field of observation that challenges the best work of a close observer, and to him who will produce the thesis that shall accurately display this secret there is a fortune awaiting on prompt sales of such a publication, and it is not improbable that the distinctions will be most striking and infallible in half-hidden details, rather than in the general form.

In the bovine race generalized observation gave value to a wedge-shaped cow for a milker, but the noted French authority, Guenon, crystallized his observations and classified them upon the details of the milk mirror or escutcheon (the surface of hair turning upward along the back of the udder and inside of thighs). So accurate was he that he could not only tell a good milker but would gauge very closely the quantity of milk she would produce.

Whether he or his publishers acquired a small fortune from this publication I am not advised, but thousands of volumes were sold at a price that should have given a fair royalty. Yet so subtle was his judgment and undefined his margins of difference between the several orders and classes of escutcheons that I think not one of his disciples ever stood his equal as a judge.

After standing repeatedly behind rows of cows, chart in hand, the writer often found himself unable to discover when he passed from a selvidge mirror of the second order to one of the third order. They all seemed to merge one into another, yet it is our opinion there is value in the system.

So it is our opinion that the tabulation of a system of designating the laying type of hen will lack distinctness of marginal differences necessary to make it of value to the casual observer. Then what must be the test for selection along this line? I presume I might ask ten men this question and receive ten different solutions as *the* test. And owing to the fact that each of these men may be eminently successful I safely conclude each one of them has *a* test, but none has *the* test, and as a combination of several or all of these tests is usually convenient and practicable it is simply advisable to use every facility at our command. (I do not wish to provoke argument or forestall argument outside my subject proper.) Yet I foresee some one will ask, "Why is not the trap nest *the* test?" Without entering into a physiological and hygienic treatise upon the possible condition of the hen during a period designated by the trap nest for better or worse, yet results not what might be expected from her appearance and breeding nor what would stand true of her at the end of her career or such as would eventually be credited to her through the record of her progeny, it is sufficient to say: The trap nest is one of the best tests yet not infallible and not always practicable. Our general inference is, we should not wed any partieular means to an end but avail ourselves of all, and when we have possessed an undoubted good thing stay with it through thick and thin, though it may seem to weaken in places or generations it will most surely reassert its strength with increased vigor through persistent adherence to blood lines.

One test that the writer has applied to Barred Rocks with a marked degree of success is practicable and easy to apply in all sized flocks and under all systems of work. It is to note every pullet that becomes a winter layer and band her leg, then keep her in preference to those showing less precocity. If I could procure enough pullets laying before Dec. 1st I would keep none laying their first egg later than that date, provided my chief object was to emphasize egg production. Of course, other objects and conditions might be under consideration at the same time, and so modify the details but not change the system. A different climate or a different breed would need to fix some other date, and the "fancier" whose interest centralizes in the show room rather than in useful features would find it necessary often to retain an actually worthless specimen from practical standpoints. At one time, if I remember rightly, there was a famous Barred Rock hen that went the rounds of Michigan's shows an undisputed winner. She was known as "Rachel Pierce," and wound up her career by winning the first prize as a dressed carcass in a Chicago fat stock show. She never lost a first prize when shown, sold for $10 at her last sale, weighed 10 pounds and was 10 years old, and "never laid an egg in her life," is what her owner said to me a short time ago. Yet she was the fancier's delight because she possessed the faculty of passing for one hundred times more than she was honestly worth.

In bringing out this important object under selection I have unavoidably digressed from the subject of selection to a short treatise upon an object to be selected.

Selection involves every other known principle in breeding art, and is of more importance if possible than all the rest. It is also unfortunate that my subject comes just now in season, but out of order in what would constitute a well ordered series of articles in which this would properly stand last.

In the selection of an individual the subject in hand is much broader than the individual personality.

It is selected because of certain qualities it is supposed to possess, neither must we lose sight of the fact that we must require probabilities that the subject will transmit its good or desirable qualities to its offspring.

It is the product, not the individual, we expect to sell, as it is safe to presume our subject has not been tested as a breeder, we must rest our faith in this matter upon the possession of good qualities by previous generations, displaying the same in a marked degree throughout unbroken successions of ancestors remote and near.

This suggests line breeding and pedigree, of which I may write something at some other time.

Really the first matter in selection has to do with the breed. I cannot understand why it should be a crime to privately misrepresent a thing, and the fashion to publicly advertise falsehood, yet I have often felt myself the victim of such methods. Perhaps it is like classical music, and we lack the education to appreciate it. A man will advertise that his is the best breed by far that exists, but will sit down with you and frankly admit that there is no best breed but that all depends upon conditions and objects sought.

Then first we will consider yourself as a condition. Are you unselfishly interested in the work, so you will give the best of care and feed? If not then secure the hardiest kind of roustabout native, and join the "Hens don't pay club." If you will give good attention, then select the breed fitted to your best market for your main product. If one breed is most popular in your market that is your best breed to select. If you must confine your stock mostly, or if on the other hand, they are to have large range and are expected to rustle a good deal for their living, select accordingly and it is a question whether this is so much a matter of difference in breeds as an inheritance of acquired habit through long usage to a certain treatment.

If you would test the force of this statement three years will usually satisfy you there is much truth in it. Divide a flock of chicks of the same origin, for three years breed one section and its offspring in confinement, well fed and groomed; give the other wide range, and so temper the feed that they never suffer, but are always hungry enough to hustle. Then select young stock of these two families and place them on an equality on the open range to hustle for their existence; one set is at home and thrives; the other is actually half incapacitated for self support, and if it does not wither and die, it will in a majority of cases stand second to the bird of inherited thrift.

It is said to be the evidence of certain experiments and observations that highly developed specimens of improved live stock are usually inferior in the development of some vital organs, as lung, liver, etc. I have myself seen a family of swine subjected generation after generation to a diet of soft ground food until it became a family defect, that this stock could not bite corn from the ear, owing to this same pampering indolence accompanied rotundity and symmetry of figure, until the animal had scarcely lung power enough to squeal and while it may have constituted a good show animal it was useless as a breeder.

I do not wish to infer that good lung power is inconsistent with good form and symmetry. The reverse is really true. But the two seldom develop equally except when accompanied by judicious exercise and the exclusion of pampered excessiveness of fatty formation.

This is clearly the source of a belief held by many, that free range birds are best and it certainly has sufficient good grounds to make it an item, regarding what stock we had best select from and it gives the farmer breeder great advantage over the city fancier who must compensate his lack of room with extra care and labor. The city man will, however, have the satisfaction of knowing his birds are safe from the "varmints" that infest the farmer's fields. (I have written this thus far seated under a tree, my gun in my lap and four hawks have paid me their compliments in the interval.) I lose annually one or two hundred chicks from this cause, about enough to discourage one. Yet I shall make desperate effort to average my wrongs over the bullet route, rather than confine my youngsters to a territory smaller than their sweet wills elect, as my selection demands vigorous, active, large sized birds, with plenty of bone and muscle and large frames to give room for the vital organs of life and reproduction.

I deem it proper at this point to state that large size and activity are so correlated that extra size is seldom satisfactory unless accompanied by methods that compel activity.

The small bird of nervous temperament under confinement will foment itself into insane and destructive nervousness, while the large bird of phlegmatic temperament will tend to cultivate idleness and obesity. I can not say which is more ruinous to desired results. I plainly would not select from either class, neither am I writing against the man with small territory, provided only his methods are correct his stock is as good as can be had.

In this climate for months we must confine our stock mostly to the house, yet here we may make them work the tread-mill for what they get; when they work they usually sing, and when they sing is a good time to select them.

Then in the end "While you may forget the singer, you will not forget the song."

It was entitled "Dollars and Cents;" "Hope and Participation."

As the inheritance of defects both normal and abnormal is a force constantly operating and is strong enough to span several generations in which the defect does not appear, we should be sure that the ancestors of our stock were as free as possible from defects and disease.

Dr. M. Miles declared "It is frequently more difficult to avoid defects than to secure a predominance of desirable qualities."

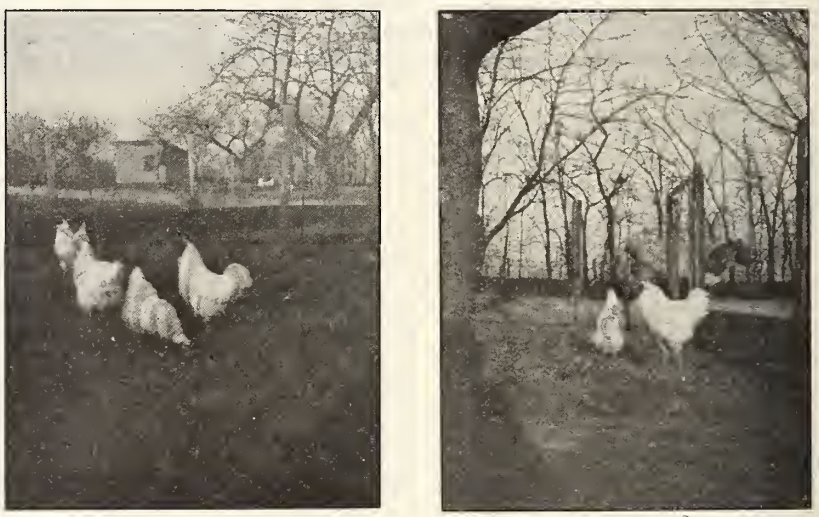
Were this not true there is but little doubt that inbreeding of the nearest perfect specimens of domestic animals, would become the exclusive practice of all breeders.

Sir John SeBright in speaking of the dangers of defects says, "We must observe the smallest tendency to imperfection in our stock the moment it appears so as to be able to counteract it before it becomes a defect, as a rope dancer to preserve his equilibrium must correct the balance before it is gone too far and then not by such a motion as will incline too far to the opposite direction."

As the special influence of the male is so much more widely diffused into the flock than that of any single female (except in mating pairs) particular care should be given to his selection and he should be much more closely bred to the especial form and factor of our object in breeding.

If the flock is defective in a particular as too large comb, it is doubtful practice to select a male overdrawn in the reverse, or with too small comb expecting general averages, as the tendencies are to break up all types and a diffusing of promiscuous inconsistencies through your flock, lacking in every desirability even in uniformity; the great strength of every good thing. Better select the perfection of your typical feature, a golden mean, adhere to it unconditionally, knowing you will then ever be pulling to and not past the desired position.

Our selections must also be governed by sexual variations. While these variations often amount to positive dissimilarities, there is always correlation and correspondence of difference in figure and



Two prize-winning pens of White Wyandottes, owned by George G. Brown, Cleveland, O.

color of male and female that is quite constant.

This principle cuts a considerable figure with those breeders that practice double matings, and when the degree of variation and the complementary figures are perfectly understood, what at first seems abstruse and is a maze of mysterious uncertainty, becomes lucid and increased certainty in geometric ratio from generation to generation (assuming, of course, that our method is correct and consistent with nature).

Enlarging upon this important feature in selection, for several years I have carefully followed the best written authorities (outside the Standard) upon methods of double mating in Barred Rocks. Some writers have partially defined the principle in nature governing proper selection; others, apparently ignorant of the existence of a governing natural law, have espoused the ratio theory in haphazard manner; if too dark, diminish color in male; if too light, increase color, just as we would mix white lead and lampblack to produce "lead color" of greater or less intensity. Others have a clearly defined practice in conformity with the natural law, but fail to draw such forcible attention to the law itself as to make the practice clear and safe to the novice. This method has been stated thus (I imagine my language is so near a quotation I would be safe in setting quotation marks).

For males select males of Standard color, mate to females a little darker. For females select females of Standard color and mate to males a little lighter than Standard.

This is the best statement of the method I have seen, but it really gives the beginner no suspicion of a law, that is as consistent and constant as gravity and needs only to be ridded of all controverting forces to become uniform in its results.

The first part of this law is, that despite the hope of many that "Standard" (?) matings will be accomplished, up to the present the predominating rule has been that the male Barred Rock has been lighter in color than his full sister. The second part of the law is, that any given shade of male color has its complement in the female. It is not to be disputed that if these complimentary shades of color, constituting sexual difference, were reorganized by the Standard and held constant, they would eventually reproduce with unusual certainty. The weakness of this system rests in the fact that thus far consistency of color can be maintained, up to the Standard, in but one sex at a time, for there is a correlary to this law, that the male tends to produce male offspring lighter colored and females darker than himself and if females are given him dark enough to neutralize this correlary and throw males of the sex's shade of color then the females will become darker than Standard and curiously enough we have essentialy a cockerel mating in which neither sex may develop Standard color, the males being too light, and the females too dark. So we define the substance of the natural law underlying double-mating thus: Preserve Standard requirements in one sex and mate with its complement in the other sex. You must learn to recognize the complement by experience and observation, to give it for each breed would make a book and pass my ability, but if I digress further upon this sub topic I will spoil a good theme for another article some other time.

We must guard against selections from stock in which one quality or more, though ever so desirable, have been so overwrought that they constitute a predisposition to disease and early collapse of a useful career.

"The diminution of hardiness that results from the development of the best feeding quality, must not be allowed to proceed so far as to become a predisposing cause of disease."

"Any inherited predisposition to disease must in like manner be carefully avoided and the best sanitary conditions should prevail in the system of management."

[Quoted from our class room notes taken under Dr. Manley Miles, an eminent authority upon stock breeding.]

Precocity and early maturity up to a certain limit are desirable, but are often only expressions of nature to anticipate an early collapse and premature death. Amputate some of the vital organs of a thrifty plant and it will immediately convulse itself with sporadic efforts to fruit and seed as it were to prevent its death, being the extinction of its race. The tendency of the Jersey cow to bear offspring at an early age, is most uniformly attended with a cessation of usefulness at an age when other breeds are at their best.

This may or may not be a defect; all depends upon the objects sought. Then let your selections along these lines be in harmony with your necessities, but let them be every time the same and to the same purpose.

Your selections should be always in line with a well defined purpose, always consistent and persistent. Seek to build up a desirable object and to establish a demand for that object, by making it worthy the demand through useful and beautiful attainments; shun all fads and crazes; they are of today, despised and laughed at tomorrow, swindles from first to last. Stand upon merit and though not of meteoric burst your success will be in a crowning glory of solid achievement.

# American Breeds.

## The Plymouth Rock, Wyandotte and Others. Their Origin, Advancement, Methods of Mating and Care. By T. F. McGrew, New York City.

THE beginning of what might be called the advent of American Poultry began with the Brahma and the Leghorn, with these it was the act of improving that which came to us from other shores, but the conditions surrounding the actual formation of our American breeds, bring with this new formation the result of crosses made for improvement, the wish of those who began this "to be" the most valuable breed of fowls, was the production of better table qualities and egg producing powers. At that time began in actual earnest the advancement of all agricultural pursuits and with it the desire for improvement of all of our belongings to farm life.

About 1850 there was a breed of fowls called Black Javas, well scattered through the east, from Philadelphia to Boston, it is recorded in the early fifties that they were quite plentiful in New Jersey and Long Island. It is thought that this bird formed one-half the cross, from which the Jersey Blues were produced. They were a large black fowl with single comb and smooth shanks that were of a dark color. Mr. John Giles brought some of these Black Javas into Connecticut and through him Rev. Ramsdell became interested in poultry and secured some of these Javas from Mr. Giles. In turn Mr. George Clark of Woodstock, Conn., secured some that Rev. Ramsdell had sold to Mr. Thayer. Mr. Joseph Spaulding, of Putnam, Conn., had a fine flock of American Dominiques. Mr. Clark induced Mr. Spaulding to mate his Dominiques to some of his Black Java hens in hope of improving both. The result of this cross gave the foundation for the well known Spaulding Plymouth Rocks, from which was bred the several strains so well known, as: The Ramsdell, The Drake, The Upham and The Putnam Strains of Barred Plymouth Rocks.

All these several early strains came direct from the Spaulding original Plymouth Rocks that had smooth shanks, mostly with dusky yellow shanks, other later crosses must be blamed with the infusion of Asiatic blood that inflected them with the feathered shanks. Mr. May, who had of the same strain, admits having made several crosses, one of which was a Game cross. Mr. Felch calls attention to the fact that White Birmingham was crossed into them, be this as it may, all these several crosses do not change the facts as to the original Spaulding cross, from which came the foundation of them all.

Quite a few imagine that the Barring of the early day Dominique was but slight, that it may be better known just how well these Dominiques were barred, will furnish an illustration taken from Mr. C. N. Bernent's book, published in 1856, which shows barring that will average fairly well with the Barred Plymouth Rocks of the present day. Too many hold the opinion that nothing of quality was in their make-up and that we of today, have outstripped all precedent in our work of wonder with our mesmeric matings. When we study this feather and consider that in those days it was "go as you please" in the barnyard, we must admit it is well barred.

No other fowl has had equal attention paid to its culture that has been given to the producing of Barred Plymouth Rocks. Every possible theory has been advanced and tried and the very best

results have come to those who have adopted our advice of several years ago when we advocated single pair matings, so one might be positively certain of the hen that laid the eggs, which produced

American Dominique Feather taken from a book published in 1856.

the best, at the same time we stated that the highest quality could and would be produced under the single mating system and while we freely and willingly admit that so far it has not been done, we still hold to the opinion that it will be just as Mr. Mitchell has built up his strain of Partridge Cochins, from which he can and does produce the very highest quality from the one pair, so will some one do the same with Barred Plymouth Rocks.

THE DOUBLE MATING PLAN.

Today the majority of successful producers of high quality Barred Plymouth Rocks use or claim to use the double mating system. Not long since one of our recently successful New York breeders called striking attention to the absolute necessity of following the double mating system for producing exhibition stock that will win, again we willingly admit that it is claimed that the high class winners are produced through double mating methods, but until some one breeder can actually produce *within his own yards* in any one year two cockerels and two pullets that can win the red and blue at our leading show in their classes we can hardly feel that wonderful things can be claimed from these double matings.

Ten years ago the male of the Buff Cochin Bantams was a deep cherry red and the female a lemon color. They naturally bred this way, as they came from China, and many continue to breed them in this way at the present time and ardently advocate the absolute necessity of so doing, while others are able to show a line of both males and females of even true buff colors. It is quite as possible to regulate the color gap between the male and the female Barred Plymouth Rock as it is between these Bantams, the same conditions exists with the Partridge Cochins. The whole fraternity claimed with assurance equal to that set forth by the Plymouth Rock people, that it was absolutely necessary to have separate matings to produce exhibition Partridge Cochins. At the same time Mr. Mitchell has produced them in three generations, full brother and sister from one single pair of such quality as to defeat all others in this whole country.

If the double mating advocates will admit that it is easier or more satisfactory *to them* to use this system that will produce a few winners, than to begin to train their stock into the single mating lines, all well and good, but to have them simply set down their foot and say: "*It cannot be done,*" when by their own admission they have not even given it a five-year trial, savors of, to say the least, an unwillingness to have it a success. To cite what has been done in this line, Mr. Newton Adams produced fine males and females, Dark Brahmas, from single pairs; Mr. Mitchell has produced the Partridge Cochins in the same way and some of us have produced the Buff Cochin Bantams of the true color in the same way, but it called for much more care and study to produce them in this way than was needed to produce them by double or separate matings. It will be the same with the Plymouth Rocks.

To guide a strain of Barred Plymouth Rocks into producing the required quality, from a single pair, will call for a number of years of close study and patience, but we hold to the theory that it can be done and will be done and the day is not far distant when it must be done, for before long there will not be any sale for the medium and poorer qualities of stock produced under the double mating plan only for market. Thousands who buy in hopes of being able to gain a little pleasure from breeding a few good fowls, have turned to other breeds. These conditions are responsible for the great boom in the new white breeds and those who think that the fostering of what might be called a secret process is the life of a breed may simply turn for a moment to the prosperous condition of the White and Buff American variety market.

PLANS FOR MATING.

A successful single mating is the union of one male and one female that will produce males and females, both of which will have the highest exhibition qualities. The mating of a trio or pen cannot be called a single mating, unless the eggs of each separate female can be selected, so the chicks from each hen may be properly marked, for the test of the single mating is the ability of the hen to produce both sexes of equal quality when mated to an individual male bird. Many call it a single mating when a pen produces both males and females of equal quality. Such a pen may be extremely double mating, for the females may be of three or four shades and the male of medium color.

The double mating plan is the selecting of a male and female that are mated together for the sole purpose of producing high class males and another pair for the producing females. From such matings the offspring of each are kept for the sole purpose of like matings in the future. When you buy a pen of such manner of breeding, it must be for the one thing or the other, for out of such a pen cannot be mated that will produce both of satisfactory quality. Two pair or trios can be selected to breed in the same fashion, but they cannot be so united as to breed both sexes from any one male and a selection of females, they must be used for single or double matings.

The above gives in very positive language just what single and double mating means, as the single mating explains itself, we are only called upon to explain the double method. The ground is taken that the natural results from the Barred Plymouth Rock is males lighter in color than the females from the same pair, this being the natural outcome of all matings. You must select a male that is truly standard color in all sections. and mate him with female enough darker, so that the natural result will be males of the proper shade of color. To be successful you must study the natural results so as to be sure you have the shade of color properly paired so that the natural result will give you true colored males.

For females you must select the proper standard shade in the female and pair her with a male that is enough lighter in shade of color to naturally produce the proper shade in the pullets. The males produced in this way must be kept for female matings of the future, while the females of the other mating are reserved for producing males. Much attention must be given to the matings

and the offspring properly marked for future use.

PROPER SHAPE.

Pardon my saying that if we must draw our conclusions from the score card as usually seen, but few who make use of them as their manner of placing the awards have a true idea of form. Those who most bitterly oppose comparison admit that the greater attention is paid to form, while color is slighted, if we follow the card that allows but one-third for color, we find that this one-third of all receives about two-thirds of all the discount. What we should aim for is a combination that will give us *true consideration* of both and all.

That true type for all Plymouth Rocks should be most positively adhered to. The standard plainly sets forth that, which describes the proper forms and when we encourage a deviation from this demand, we depart from the one most important feature that has made the breed so valuable. There are many reasons why the Plymouth Rock has been such a general favorite, but the one above all others is the possibility for profit from them upon the double lines of so-called fancy demands and utility, qualifications. Their marked ability for egg production, combined with their quality as table poultry from the squab broiler to the grown fowl, gives them a position that we should not attempt to take from them by neglecting to foster the fine formation, that is, the real secret of their success.

The proper formation of the true American Plymouth Rock gives the elegant plump carcass for the market stall, as well as strength and durability for a large egg production, and their natural inherited inclination to lay eggs of good generous size places them over and above all producers of brown eggs This same condition extends to all three varieties and to hold this high position, good form and large egg yield must be encouraged, which cannot be done, unless we cast aside personal preference for color over all other features. We must not try to influence ourselves against what we know to be proper form, for as certain as we do, other breeds will push the Plymouth Rock out and away from its present strong position.

There is quite as much difference in *proper* contour between the Plymouth Rock and the Wyandotte as between the Cochin and the Brahma, the former we might say are built upon the lines of the Brahma, the other fashioned after the Cochin. The longer back and body of the one gives the egg production that is better in size, while the more compact build helps the appearance of the dressed carcass, but reduces the average size of the eggs they lay. These are conditions that naturally belong to each, both are valuable and should be mentioned and the absolute demand of all interested in both should be directed toward a closer adherence to their respective type when passed upon in the show pen.

If we, as individuals, applaud the placing of an award upon one or more of our own specimens that have not the proper breed characteristics, we harm ourselves and others, but when the poultry public and press allow the accomplishment of such wrongs to go unnoticed, we unite to kill the values that belongs to each and while we may feel that we prefer to pass such errors unnoticed, because it may reflect on our friends, the judge or the breeder, we forget the many thousands who take their lessons for future matings from these object lessons, we sit up for their observance. The future success of the poultry business depends upon the fair treatment of the masses and not upon the present profits of those who gain by the praise that springs from friendships.

COLOR.

On several occasions our statements, favoring comparison judging, have been twisted by others into a preference for poor color. That no one who reads this may be disappointed as to my position shall take this opportunity to say, that if possible so to be, I am more opposed to poor color than bad shape. My position is this: Shape makes the breed, if a specimen is not of the proper breed form demanded for its class, no matter how beautiful it may be in color it has no right to win over a bird of splendid form and even medium color. When we

BEAU BRUMMEL.

Buff Plymouth Rock Cock. Bred and owned by Dr. O. P. Bennett, Mazon, Ill. This bird is of one even shade of buff throughout. He has an absolutely clear wing and as good a tail as grows.

learn this lesson great improvement will come in both.

The Standard demand for color in all fowls is plainly recorded. No one need to go astray in this, and it should be the settled purpose of all to continually strive for the most perfect elegance of color in plumage that can possibly be obtained. The continual maintainance of this should be the watchword of the hour and he who would teach the lesson of poor color upon any fowl cannot be accepted as a profitable guide, nor can we pin our faith to one who will try to guide into a method that has the slightest tendancy to sacrifice either form or color, as both must be of the highest quality with the record winners of the future.

We scarcely think it necessary to say more as to our position on color, for we absolutely refuse to be classed with those who favor any but the most perfect color. We do not tolerate bad color in our breeding pens, nor do we ever favor same in the exhibition pen. We positively have no use for a specimen of any kind that fails in either shape or color and feel that the sooner this same strong aversion *to both* spreads through the land that much faster will all breeds improve.

PLYMOUTH ROCK COLOR.

The Standard describes the color for Barred Plymouth Rocks as bluish gray, barred with narrow parallel lines of a dark blue that stops short of a positive black, this barring to show the entire length of the features in all sections where they are not mostly composed of down. It is not our purpose to consider this only to try and convey the accepted idea of its meaning. First of all the distinctive colors between the light and dark must be very clear and free from all darkish cast, both must be so pure and clear in color as to give the rich marked brightness that produces the attractive bluish cast of plumage that always calls forth admiration.

The real beauty of plumage of the Barred Plymouth Rock depends upon the clear cut lines between the two colors, the purity of the two colors and the narrow parallel bars. This calls for barring that runs in even lines across, all of them running parallel one with the other. When they refer to the oval or ring barring, it refers to a style of barring that is quite beautiful when perfect throughout. The perfect uniformity of such barring gives the appearance of true ring or belt form of barring in all sections. It is quite impossible to have good finished appearance of plumage when the barring is either wide or irregular or when it is broken or uneven. To be right they must run in very even unbroken lines across the feather.

The color of the ground work must be true bluish gray, entirely free from any shading and there must not be any trace of the brown shading so often seen. On the line between the two colors, each shape must be true to color and free from discoloration of any kind. Then the barring must be graduated in width of bar and space from the head to the tail. Much too often the barring in neck of females looks more like spangles on the end of the feathers than bars. This is not as it should be. The neck should be as properly barred as any section.

We shall follow this in our text by telling of a number of matings we have seen and of their general make-up. Accompanying this, we will mention fully the White and Buff varieties of Plymouth Rocks.

## NANCY HANK'S LOG CABIN.

Lina Beard, sister of the famous Dan Beard, herself famous because of her sympathy with the play of children, shows a distinct novelty in the August Delineator. She explains to the children by word and by picture how to make a toy log cabin that looks like the cabin in which Abraham Lincoln was born. We shall be very much surprised if this fails to prompt children to build log cabins large enough for play houses. Lina Beard has a wonderful faculty for selecting that which is exactly the most interesting thing for children.

**Every person entering our prize article contest, and whose article is worth publishing, will be given a copy of the latest Standard and two year's subscription to A. P. J. Your article does not have to be better than any other one. See the offer elsewhere in this issue.**

# Success With Turkeys.

*By S. B. Johnston, Boggstown, Ind.*

WE are approaching another show season, and August finds us poultrymen very busy in getting our birds through the molt and shaping them us for the fall fairs. It depends to a great extent on how the birds are treated through July and August whether they win at the fall and winter shows or not.

It is when the feathers are only partly grown out that the dangerous time comes to the color of the perfect plumage; that is, if a feather in any way gets bruised or broken when it is in the green, as it is termed (or partly grown), it will almost invariably make a faulty colored feather, and that is the reason why one should be very careful in managing his birds through the molting season.

I look forward to the coming show season with great anticipations, and especially the great Buffalo or Pan-American show, as we have the finest and largest young birds from our prize stock that we ever owned, and I can almost count the winners by the scores now, which is sure and abundant evidence of a year of great and glorious possibilities. I would like to see every one who is interested in the Bronze Turkey join the club and take an active part in pushing the club till it is one of the largest in the country and then the turkey breeders would stand as good a show in the show rooms as any of the breeders of the more popular fowls; that is, they will have just as large prizes and just as large special prizes as any other breed, which the turkey is justly entitled to, as it is the farmer's best friend, and brings them more money than any other live stock, considering the amount invested.

A gentleman from Indiana writes me asking how I manage my turkeys on my present two-acre home.

I will try to tell it as briefly as possible, as I have given my method a number of times before. We give them the run of the entire two acres in the laying and breeding season, and in that way will gather nearly every egg that is laid, as the crows are not going to come in very close proximity to the shotgun, for they soon learn where it is kept, and the birds do not get away and hide their nests. We have the place inclosed with a netting that is eight feet high, and the yards for the other poultry are five and six feet. The turkeys go in and out of these yards when they please, and very seldom go over the eight-foot fence. I let them out in the laying season in the afternoon, when they have all laid, giving them fresh pasture and free range and in this way it is practically free range, and as soon as the birds are able to follow their mother they, too, are let out and have the run of my father's place and a large woods, which is the turkey's natural home. I see to it that they are all up at night, and it only takes a few times feeding regularly until they learn to come up of themselves, and we build them a roosting place by putting up posts, with poles across, about seven feet high, and in this way the birds can be taken from the roost, and it saves them from getting up in the highest trees and crippling themselves in flying down, but it is very seldom that the largest of my birds ever try to get up on the high perches. I try to keep them away from anything where they can find a high perch. I have had some of my very best birds render themselves unfit for any use whatever, simply by flying from high roosts and breaking themselves down. Last fall I had a very fine pullet that was worth $50 that flew out of an apple tree and dislocated both her hips and she had to be sold on the market for less than $1.00.

I have an inquiry from a gentleman in Portland, Ore., asking what is meant by turkeys in confinement, and I have partly told it in the above, but they must not be in so small a place that it will make them restless and uneasy and in constant confinement, which will after a while make them, as it were, heart-broken, when they will not do any good for themselves or any one else, but will droop around and die, as a turkey must feel free, whether they are or not, for they are of a wild nature and it cannot be changed.

I am also asked by a gentleman in Minnesota how little turks get water to drink on the range where there is no well or running water for them to get to, and would say that this is the way that I have raised my very finest turkeys. It seems that they require but very little water and all is needed is what they get off the dewy grass in the early morning.

I have also a letter of inquiry from a lady in Michigan, asking which is the most profitable: to set all the eggs under the turkey hen or set them under chicken hens. I would say that I set them both ways, but I prefer to have the poults run with the turkey hen, at least after they are nearly the size of quails. If you have free range this plan is best, as they get much larger than those raised about the house with chicken hens, and are more healthy. Hard boiled eggs mashed up, shell and all, or shells mashed up fine in any feed, is very beneficial to young poultry, if not given in too large quantities. Poults should be put on a ration of hard grains as early in life as possible.

I have a number of times been asked what a man should make his turkeys pay or if there is really good profit in raising them as some say there is, and I can answer this question to my own satisfaction and many others know that it is so. I sold a trio to one man who had been a carpenter all his life, but who met with a misfortune and could not follow his trade. From the two hens he raised 122 turkeys and paid me only $15 for the trio. He sold the most of them to his neigbbors and friends for breeders, as there was none of my National strain in that part of the country, and they were so much nicer than any around that they were easy sale at from $2 to $5 per head. and he sold the rest on the market at something like $1.25 each, making him a neat profit on a $15 investment.

From a fancier's standpoint it is not uncommon to get all the way from $20 to $50 for a first-class show bird, and in the East at the big shows at times they even get twice those prices. I have shipped a bird to Australia and got $40 for a tom "Indiana King," and then people ask if turkeys are profitable when you can keep one a year for $1. It is a strange thing to me that there are not more people breeding turkeys for exhibition, but they are awakening to their interest and are realizing what they have lost, and I predict that the coming year will be the climax of all previous years, and that breeders are going to buy heavier than at any time in the past. Present indications are showing it very clearly.

S. B. JOHNSTON.

## Preserving Eggs.

With a view of testing the relative value of lime and salt mixtures and water-glass as egg-preservatives, we pickled about sixty dozen eggs in two lots. The mixtures were:

No. 1—Lime, fresh, 3½ pounds, salt 4¾ pounds, water 8 gallons.

No. 2—Water-glass, 1 part water-glass to 18 parts water.

These eggs remained in the solutions for about six months. When examined the water-glass was found to be the best pickle, although the lime and salt served its purposes very well; still the whites of the eggs preserved in this mixture were much more watery than the whites of those preserved in the water-glass. These were difficult to distinguish from fresh eggs since the white was quite firm and yolk stood up upon it just as though fresh. Another advantage in the water-glass is that it does not seem to affect the shell of the egg as the lime mixture, eggs from the lime and salt mixture being much more liable to crack, either in cooking or handling. We consider this matter of preserving eggs of great importance in this state since prices are so high for eggs in the winter season. We do not for a moment advise the selling of preserved eggs for fresh laid, but we have no hesitancy in saying that when the market finds that these preserved eggs seem almost as good as the fresh eggs, it will certainly be willing to pay a price which will leave a good cash margin in favor of pickling. Water-glass or sodium silicate is a liquid of rather a smooth, slippery consistency, readily soluble in water. It may be obtained through any druggist at a cost of about 75 cents a gallon. In using it we would advise the use of stone jars or crocks. The water used should be quite pure, and if not it must be boiled. Jar should be covered to exclude any dirt, and kept at the temperature of a cool cellar. Sometimes the specific gravity of the solution is greater than that of the eggs, in which case the tendency will be for them to float, when they may be forced down by a plate or similar arrangement with a weight on top. —*Bulletin 26, Montana Agricultural Experiment Station, Bozeman, Mont.*

Poultry will not thrive upon an exclusive grain diet and this should be plainly evident to every thoughtful person, yet many breeders never give the birds anything except grain of various kinds and still they expect thrifty stock and a large egg yield.

# Culling Cornish Indian Games.

By C. S. Whiting, Darien, N. Y.

JUDGING from the vast difference we find in the shape, and color, of the Cornish Indian Game, both in the show room and in the breeding pen there seems to be a very great difference of opinion as to what really constitutes a typical or standard bird.

This same difference of opinion we find among the breeders, in all varieties of poultry, some being called "cranks" on shape (very few of these) while others are called cranks on color. Much has been written and said on the question of what constitutes an approximately perfect specimen and there no doubt always will be. Happily we cannot all see and think alike. If the world all thought alike, I fear much trouble would be the outcome.

The selecting and culling of a flock of Cornish Indian Games is no small matter. The amateur should study very carefully the description of this breed given in the Standard of perfection. Before attempting to select either show birds or breeders, he should examine his flock carefully for those showing any disqualifying points and discard every bird with any deformity whatever, every bird not having a pea-comb or those with permanent white in ear-lobs, crooked toes, etc., etc.; such are useless except to make a pot-pie. Having discarded all that show any disqualifications, next comes Shape, and let me say that on this rock the majority of breeders fail. They seemingly shut their eyes to the long-legged, narrow-bodied, swan-necked, hungry-looking thing because it has a few nice feathers. It is the all important point and the first thing to be looked after. Shun those creatures with no more Indian Game shape than the writer.

Keep those, only, with short legs, set well apart, broad backs, broad skull, prominent, even fierce, looking eye, wings carried well out in front and neatly tucked at stern, tail carried low, giving us a bird with a massive appearance. Dispose of every bird, male or female, not approximately near the ideal in shape. Always hold to shape for if you have not shape you have not an Indian Game, simply a fowl with Indian Game feathers on it. After discarding all those lacking in shape, take color. Male, first: Discard every cockerel showing white in under color of hackle or saddle, or showing white in wings or tail. Also those having red in breast and also those in which the red predominates in saddle, giving them the appearance of a Partridge Cochin or Brown Leghorn over the saddle. See to it that the cockerels you select for show or breeding show the crimson shaft in hackle and saddle; some tolerate many of the above points (it should not be so, nevertheless). The standard says they are wrong. Individual ideas or preferences do not count or rather should not. Female: Discard every one that at a short distance looks to be nearly black. The standard calls for a golden bay, ground color. Many mistake this for brown, even seal brown. The dark mahogany color of the Partridge Cochin is not golden bay. It is not what the standard calls for at all. Still very many make this error.

The tendency of the average American breeder is to select females altogether too dark in ground color.

Each feather should have its distinct lacings of black, and should show prominently so that the lacings can be seen without having to take up the bird and hunt them up. A single laced and triple laced female should be discarded. The standard calls for two and means two; the reserving of specimens with one or three lacings is sometimes resorted to by older breeders on account of some particular blood point or characteristic, but is not a rule for an amateur. Better not breed from such. They are specimens with a very bad defect and it is not safe to use them. When you have made your selections as to shape and color, next comes hardness of feathers. This point is sadly overlooked. Nearly all seem to forget this matter. An Indian Game should be very closely feathered, the closer and shorter the feathers the better. Never reserve a specimen which is loosely feathered. It is a defect and a bad one.

If possible study well the cut of some of our noted winners. The cut which appeared in the April number of this paper will give you an excellent idea of the shape of an Indian Game.

I predict a great revolution in the subject of shape in all breeds in the near future. Breeders and judges have neglected this essential point so long that it is a fact that if many of the noted winners in other breeds could be furnished with a patent detachable comb they could be shown and win, too, in three or four different classes. Why? Simply because the shape is almost identical. We do not want this to occur with the Indian Game, so let us be very careful in the selection of our birds.

# Water Fowl and Their Care.

*By Chas. McClave, New London, O.*

THE largest of all white varieties of the goose tribe. First bred near embden, Province of Westphalia, in Prussia. This variety has been widely disseminated nearly all over the civilized world, especially in England and the United States. The standard color should be pure white throughout; however, slaty colored feathers many times appear on the backs of young Embdens, especially females, which usually disappear with the first moult. While this is a disqualification it does not signify impurity. Twenty years ago nearly all Embdens had flesh colored beaks, and in fact at that time our American standard required a beak of this color. Today they are rarely ever met with. There is no doubt whatever that climatic conditions have changed the color of beak to a great extent, and our standard of perfection now requires an orange beak. To our way of thinking an orange beak gives the bird a much handsomer appearance. It should be remembered that the bean of the beak is not yellow, but light horn color. The carriage of the Embden should be very erect and more rangy than the Toulouse. The plumage is shorter, contains more down and is more valuable than that of any other variety of geese. Doubt exists in the opinion of many growers of geese as to which should stand first in point of merit and popularity of the two leading varieties —Embden or Toulouse. Both varieties have attained their present position and popularity as leaders of the goose family only by their large size and many good qualities. The standard weights of the two varieties are the same—namely, adult ganders, 20 pounds; adult geese, 18 pounds; young ganders, 18 pounds; young geese, 16 pounds. Over fat specimens for show purposes oftentimes exceed the above weights; however, for breeding purposes they many times prove a disappointment. Past experience has taught that breeding geese should be fed very sparingly through the winter, and the result will be more eggs and more goslings and stronger ones. Past experience has taught that a flock of geese running together containing half a dozen ganders and a dozen or more geese will be a disappointment to their owner. The percentage of eggs will be far below the average of what it should be and the fertility will also be a disappointment. We strongly recommend the mating of one gander with three to four geese and only this number to be kept together for satisfactory results.

In our Ohio climate near Lake Erie the Embdens usually commence to lay the last of February, and sometimes not until the first of March. As layers we do not find them equal to the Toulouse, however some breeders have made statements otherwise. Usually yearling geese only produce about one-half as many eggs as older specimens and many times only a portion of the young goose's eggs will prove fertile. From a breeding standpoint we value one old goose higher than three yearlings. We advise the use of hens to hatch goose eggs. The geese if allowed to sit usually break more or less and destroy the young in their nests by tramping on them. The young are easily reared, living almost entirely on grass and vegetable food. After six weeks old they can be turned over to the old geese for protection.

While geese will thrive with only water to drink, we strongly advise that a pond of water be provided for them, as they will require much less food and keep in much better condition.

# THE FANCIER IN THE POULTRY YARD

THOS. F. RIGG, Iowa Falls, Iowa.

THE following letter from a fancier touches, I think, a matter in which every exhibitor and breeder is interested. It is a personal letter received by the writer hereof:

* * * * In your last letter you asked me where I would exhibit the coming season. I do not know that I shall exhibit at all this coming winter. You know that my experience last winter was not pleasant. My winnings at ———— and at ———— should have brought me lots of business, and would have done so had I heen used right by a number of poultry journals. As it was I was practically robbed of the honor of a successful exhibitor, and of the trade that naturally follows such winnings as I made. I still feel about this matter just as I did when we last talked it over. I may exhibit this winter, but it is doubtful.

It is pretty hot weather just now, and it will do us all good to think of next winter, anyway, and while so doing let us consider this matter. Here is the case: The writer of the above letter is a successful business man who became interested in standard bred poultry about six years ago. He bought the very best stock obtainable, and developed into a successful breeder and exhibitor. His stock won in the leading shows in his home state. Last winter he exhibited at one of the most important shows and won many prizes in his classes. He was proud of his record.

But the pleasure and satisfaction derived from these winnings was soon very nearly wiped out. A number of poultry journals in their special reports of the show severely criticised his stock and the judgment of the judge that placed the awards. At least one of the reporters was directly interested in the birds which our friend had beaten.

Now, let us look at this case, up one side and down the other. This man won under one of the most popular and able judges in America. There was no charge of wrongdoing—none at all. Special reporters, interested, some of them, came forward, and placing their judgment against that of this worthy and honorable judge, and in unqualified terms made the record that the judge gave inferior birds places over superior birds. I say they "made the record," for the poultry press reports of a show do in fact make the record of that show so far as the belief of the greater portion of the poultry fraternity is concerned. As a result this successful exhibitor was not allowed to enjoy the fruits of his victory. The readers of these journals—the men to whom he appealed as customers—did not want his stock.

Do you wonder that this breeder is not the enthusiastic fancier that he was a year ago?

He cannot see that his efforts will avail him that pleasure and profit which naturally follows success in the show room.

This case and its results bring up the question as to whether or not the present system pursued by many of the poultry journals iu reporting shows is not a detriment to the cause. An exhibitor wins under a judge of national reputation; the fraternity, as a whole have confidence in his ability and integrity; now comes interested (or disinterested) reporters, and give it out as a fact that the birds thus winning were misplaced, and that Mr. So-and-So's were superior and should have won. The readers of these journals, having confidence in their favorite journal, regard these statements as facts, and Mr. So-and-So gets the business. This is not right. It is all wrong. It is not only a blow at honest endeavor and ability as a breeder, but it is a blow that reaches the very heart of the industry.

An honest criticism of awards and the birds in the classes is all right, but this system now in vogue with many journals wherein special reporters summarily remove the winners from the head and put them in "the also ran" class is working a great injustice to exhibitors and to the cause of standard bred poultry. There can be no doubt of this, and the case here cited is but one of many and many that have come under notice. It is taking from a man something valuable which he has created by brain and hand.

This is an important matter and should receive the careful consideration of all concerned. I think it is a system that has "sorter growed" upon us all—the poultry press and the readers. But it is an unjust system, and should be abolished. *Thos. F. Rigg.*

### SOME INTERESTING QUESTIONS.

An English breeder contributes this highly interesting letter to *Poultry*, London:

I understand that a new variety of Rocks have just made their appearance in America, and their debut in this country will naturally follow in due time. What I want to know is this. I have in my yard at this present moment a number of partridge Wyandottes with single combs. Now suppose I were to pick out all the Rock shaped ones and breed from them—should I be justified in selling the progeny as partridge Rocks? Of course I don't want to do anything unfair, and that's why I ask for information; nor do I wish to make the slightest insinuation against the originator of the "new breed," knowing full well that our trans-Atlantic cousins, though cute, are perfectly straight in poultry matters and always may be trusted for calling "a spade a spade." Only I want to know, you know.

By the way, how is it that no one has ever tried to bring out golden penciled Rocks, having the Rock barring on a golden ground? It seems to me the simplest thing going, and if I had but time I'd have a go at it myself. But if successful I should not proclaim the fame of my new creation from this side the herringpond—no fear! I'd take my pets across the water and re-import them—then I bet they'd sell like wild fire.

# Market Report.

## BOSTON MARKET.

EGGS.

| *Receipts*— | Cases. |
|---|---|
| For six days | 16,724 |
| Same week last year | 17,606 |
| Previous six days | 20,442 |
| Since April 1 | 491,086 |
| Same time last year | 450,273 |

We are still having an extremely dull and irregular market on the general run of western eggs. The weather continues very hot and demand slack. Most of western receipts are badly affected by heat and have to be worked off to cheap trade at low and irregular prices, a good many at 8@10c, and some still lower. Uncandled westerns have to be a good deal better than the average to bring 12c. Some special marks carefully graded and candled before shipment bring 13@14c. Michigan are selling generally at 12@14c and are rarely good enough to bring more. Dirties dull. Fancy nearby and eastern in light supply and firm.

Quotations at mark:

| | |
|---|---|
| Nearby and Cape, fancy | 20@.... |
| Eastern, choice fresh | 16@.... |
| Eastern, fair to good | 12@ 14 |
| Vt. and N. H. choice fresh | 16@.... |
| Michigan | 12@ 14 |
| Western, selected, fresh | 12@ 13 |
| Western, common to good | 9@ 11 |
| Western dirties, per 30 doz. case | 1 50@2 50 |

DRESSED POULTRY.

| *Receipts*— | Packages. |
|---|---|
| For six days | 1,029 |
| Same time last year | 1,187 |

Receipts were light following our last weekly report and choice western fowls advanced to 11½c on Monday, but the high prices checked the demand, a good many dealers using frozen instead, and on Tuesday, with larger receipts, the market dropped back to 10½@11c. Since then there has been a moderate demand, with most sales at 10½c. Demand for chickens has increased considerably of late, especially from summer hotels. Westerns have been in light supply at 18@20c. Choice nearby chickens have been selling at 22@25c. Spring ducks steady at 12@13c.

FRESH KILLED.

| *Northern and Eastern*— | |
|---|---|
| Fowls, extra choice | 12½@13 |
| Fowls, common to good | 10 @11 |
| Chickens, choice spring | 23 @25 |
| Chickens, fair to good spring | 15 @20 |
| Ducks, spring, per lb | 12 @13 |
| Pigeons, choice. per doz | 1 25@.... |
| Pigeons, common to good | 75@1 00 |
| *Western Iced*— | |
| Turkeys, common to good, per lb | 7½@ 9 |
| Fowls, choice | 10½@11 |
| Fowls, common | 9½@10 |
| Chickens, spring | 18 @20 |
| Old cocks | 6½@ 7 |
| *Western Frozen*— | |
| Turkeys, choice small | 11 @.... |
| Turkeys, mixed weights | 10½@11 |
| Turkeys, large | 10 @11 |
| Broilers, choice | 16 @17 |
| Broilers, common | 14 @15 |
| Chickens, choice | 11 @12 |
| Chickens, common | 9 @10 |
| Fowls, choice | 10 @.... |
| Fowls, common | 8½@ 9 |

LIVE POULTRY.

Fowls continue in moderate supply and small lots of choice eastern in steady demand at 10½c. Chickens have been more called for, choice lots selling well at 15@16c.

| | |
|---|---|
| Fowls, per lb | 10 @10½ |
| Roosters, per lb | 5 @ 6 |
| Spring chickens, per lb | 12 @16 |

ADAMS, CHAPMAN & CO.,
37 North Market Street.

## CHICAGO MARKET.

The receipts of poultry have been very heavy for the last few days and market lower on everything.

LIVE POULTRY.—Hens, 8½c; springs, 11@12c; large springs sell better than small. Ducks, old, 7 to 8c; young, 10 to 11c. Turkeys, dull, no demand. Geese, plenty and dull, both old and young; $4.00 to $6.00 per dozen, according to size. Pigeons, 75c to $1.00 per dozen.

We do not look for much change in the price of hens. Springs will go lower until they get down to nearly the price of hens. Spring ducks will also go lower. We advise your readers to ship everything they have as fast as they get them ready.

EGGS.—12c per dozen. Eggs have been running very bad for some time on account of the hot weather.

SPRAGUE COMMISSION COMPANY,
218 South Water Street.

The interest in poultry shows was never greater than it is this season.

# In-Breeding and Its Effects.

HOW often we hear the words, "Don't inbreed your stock, as it impairs vigor and stamina." To me this seems absurd, for experience has taught me something that theory cannot and will not teach. Of course, theory and facts often are allies, but in an experience covering twenty generations of poultry, and standard bred at that, the writer has found that these much talked of contemporaries do not dovetail themselves sufficiently to warrant their being called colleagues. Very often we hear of a fancier who has bred in and in for eight or ten years and who has ruined his flock by it. This seems quite improbable, for with facts from another quarter we find that a certain breeder has "bred in" for as long, if not longer, and yet has not seen any evil effects. What is the cause of the dissimilarity of these cases which are so nearly alike in fact?

Go back to the yards of the breeder who complains of the bad effects of inbreeding and see how his stock is cared for, how his fowls are fed, housed and mated, and I dare say you will find a queer state of affairs. We personally know a fancier of this character and let us tell you a few facts in regard to him and his stock and methods.

His first stock was very fine, the best that we could purchase for him and we advised him to let other stock alone and breed this strain exclusively. On inquiry we found that, four years before the purchase, there was introduced into this strain, through a pullet, some very fine blood, both as to vigor and stamina and standard qualifications.

The results of the first year's breeding were very gratifying. The offspring were very fine and vigorous. Also, the second season's breeding seemed to tell the writer that the way he had helped the amateur to mate his pens had proved correct. But before the stock was old enough to mate for the third year's work, we moved some 300 miles away, leaving the novice to manage his own flock, much to our dislike and the failure of the breeder. While his next neighbor we urged upon him the necessity of clean yards and houses, good feed, clean water and war against lice, yet after all our help these important things (we afterwards learned) were neglected. His once well ordered poultry houses and yards went to rack and ruin; the fowls even refused to roost in the house for the fear of lice and mites; his stock deteriorated in quantity and quality and things in general went back end first. It's dollars to doughnuts that he failed to feed them at all, saying nothing about properly or with caution. The stock and breeder went down to the "bottom of the hill" and then the owner wrote me a very sad letter, as he also did to the editor of a prominent poultry paper, denouncing inbreeding, when it should have been in-attention.

There is another fact to follow. The breeder who sold this stock to the writer for this "would-be" fancier breeds this *same strain of fowls today* and has only made one infusion of new blood in that time. Ten years from one infusion to the other (both by females) and seventeen years from the first infusion to the present writing. This stock is the very best of its kind today. Vigorous, large, handsome and exceedingly prolific. The latter means lots of eggs which are very fertile. Here is a fact against a fact. Choose either. These birds are Wyandottes.

We happen to know a southern breeder of single mated Barred Rocks who has introduced no new blood for eleven years. He's afraid, so he said, that he would spoil his flock. He breeds for the pleasure he derives from it; a true fancier at heart. It would be a disastrous thing for some of the best double maters to go up against his stock if he should decide to exhibit.

What can a breeder expect to do if he buys a new male each year and tries to establish a strain? The results will make him quit the business or start over again at a loss of time and much expense.

Breeders of more years' experience than the writer, have practised and are now practising inbreeding on flocks which are inbred to a more or less extent.

Who ever heard of a strictly high class flock produced by out and out crosses? If good birds should perchance be "nicked" by this method they cannot be depended upon to reproduce themselves. In conclusion let me warn the novice and amateur to keep lice and mites where they belong (out of existence) and to be careful in selecting breeders and cautious about their management. Success in inbreeding depends on the manager of the flock, and truly this thought, care and work is the price of success.

THEO. CAIN.

## WANTS TO KNOW ABOUT WHITE COCHINS.

SUGAR GROVE, ILL., July 7, 1901.

*Editor American Poultry Journal.*

Will some of the readers of AMERICAN POULTRY JOURNAL tell me something of the White Cochins? I have procured eggs from two different yards, one from Iowa and one from Illinois. I placed them in my incubator and in both cases not one-half of the eggs were fertile. Out of a hatch of forty-three I raised but three. They were given the same treatment and kind of food that Partridge Cochins and Grades were given. Some had bowel trouble and others seemed to weaken, but gave no signs of disease. I want to raise this variety, if they can be raised with the same kind of treatment that other birds require. Yours truly,

*Mrs. E. D. Baker.*

[The White Cochin is as hardy as any other variety of this breed and there is no reason why they cannot be as successfully raised. The White Cochins seem to be gaining in popularity and they merit the attention of all who favor a white bird of the Asiatic family. Instances, such as our correspondent makes, are liable to happen with any breed. We would suggest that some of our White Cochin friends send us something for publication in answer to the above letter.—ED.]

**Every person entering our prize article contest, and whose article is worth publishing, will be given a copy of the latest Standard and two year's subscription to A. P. J. Your article does not have to be better than any other one. See the offer elsewhere in this issue.**

*2d Pullet at Boston, 1899; 2d Hen at Philadelphia, 1900; dam of 1st hen and Champion Female at Philadelphia, 1900. Bred from 1st pullet and champion at Boston, 1898.*

Beauty and Utility Strain.

**Barred Plymouth Rocks.**

C. H. LATHAM, Box F, Lancaster, Mass.

***High Scoring***

**Barred P. Rocks.**

Two yards of high scoring birds. Rapp strain. Eggs $1.50 per 15. Satisfaction guaranteed.

*C. H. SIDDLE,*
*Bowling Green, Mo.*

***Eggs For Hatching.***

From my great laying strain of S. C. White Leghorns. Plenty of range makes them large, hardy and vigorous. Egg record kept so we know that we are breeding from the very best. Also Rhode Island Reds, without doubt the best general purpose fowl known; best winter layers on earth. Eggs $1.50 per 15.

*WOODSTOCK POULTRY FARM,*
*J. W. Mick, Prop. Woodstock, Wis.*

**BAUSCHER'S... ...STOCK WINS**

In the hands of his customers and takes every prize in sight. It never fails. We lead in quality and lowest prices. We have the largest pure bred poultry farm in the Northwest. Our fowls are all strong, healthy and vigorous. Send for our Mammoth annual poultry guide and learn how to make big money. Worth $25—sent for 15c.

John Bauscher, Jr., Box 130 Freeport, Ill.

I offer eggs from my winners at Cleveland, Columbus and Chicago.

Woodbine Press, BOX 130. BROCKTON, MASS.

Published the first of each month by
GEO. G. BATES, Editor and Proprietor.

FRANK HECK, Associate Editor.

Subscription price 50 cents a year in advance.

When delivered by carrier in Chicago 60 cents a year in advance.

Payment for AMERICAN POULTRY JOURNAL, when sent by mail, should be made by money order, registered letter or stamps.

Write name and address plainly, and if JOURNAL does not come regularly and promptly, write us at once.

In requesting change of address, be sure to give the old address as well as the new one. This is important.

Advertising rates will be furnished on application.

The reliability of new advertisers must be ascertained before an insertion of an ad in the columns of AMERICAN POULTRY JOURNAL can be made. This is a business matter, the justice of which is readily seen, as protection to the readers who answer advertisements.

Alway say when writing advertisers, that you saw it in the AMERICAN POULTRY JOURNAL.

All copy for advertising and manuscripts for publication should reach us not later than the 20th of the month preceding the date of issue.

## A Protest from England.

*Poplar Hall, Appledore, Kent, England.*
*Editor American Poultry Journal:*

In your June, 1901, issue of the AMERICAN POULTRY JOURNAL, No. 6, Vol. 32, you say: "The whole world admits the Chamberlain origin of the true Brahma. Burnham and the others claim to have been the originator of the Brahma, but even the English refuse to give credence to these claims, etc." Will you kindly allow me to say that as *one of the English* and one that not only saw but handled the first and many others imported into England in 1851, 1852 and 1853, that I *never have for one moment* believed the cock and bull story of the Cornish Chamberlain origin of the Brahma and I for one think that Mr. Burnham was a very unjustly persecuted man and that I thoroughly believe his version of the origin and I do not that of the sailor and the *one pair* from on board a ship. I never did and I never shall.

I have written my views on the subject and my comments on the birds imported at some length in my book on poultry, which I trust will one day be published. Seeing your assertion that *all the world* believes in the Chamberlain origin, I think it a duty that I owe to myself, if no one else, I having seen and handled the birds, to say that I do not believe the story and I do believe in Burnham's birds as original. I am, dear sir, yours truly, *Harrison Weir.*

We cheerfully publish the above from Mr. Weir as his remarks concerning what he positively knows and has seen are worthy of consideration, as are also those of Mr. McGrew. For more than half a century Mr. Weir has been recognized as an artist of great ability and for many years has had a world wide reputation. His interest in and love for fancy fowls has prompted some of the most appreciated drawings and illustrations of them and has made him an acknowledged authority. The words quoted by Mr. Weir are those of Mr. McGrew instead of our own, as one would infer from the protest, and in this connection we wish to state that we are not responsible for the opinions of those who contribute to our columns. Our views and opinions are expressed in the editorial columns exclusively unless specifically stated elsewhere. Honest differences of opinion will exist even in matters seemingly clear of demonstration and our columns are open to a free discussion of all subjects. The editor's duty as we see it, is to harmonize conflicting statements as nearly as possible by an unprejudiced presentation of facts and to eliminate from his columns entirely such matter as is unquestionably misleading and detrimental to the best interests of his subscribers. We make these statements for the reason that so many readers are inclined to hold the utterances of contributors as those of the JOURNAL.

# Aid to Poultry Shows.

### *American Poultry Journal's Plan to Organize New Associations and Aid in the Successful Management of Old Ones that Need Assistance.*

Realizing the importance and power for good of an active poultry association and a well conducted show, A. P. J. has decided to make an extraordinary effort to foster and encourage these organizations. The few hundred shows which are now held annually in all sections of the country could be doubled and trebled if poultrymen would awaken to the fact that their interests would be favorably affected in every way, and if they would take the proper steps toward forming local associations. Two or three energetic fanciers can in one season create sufficient interest in Standard bred poultry to justify the forming of an association upon a solid and paying basis. It is to these especially that we desire to render assistance and with this end in view we have had printed a model constitution and by-laws, also rules and regulations for the government of an up-to-date poultry association and the management of a successful show. They are published in pamphlet form and are copyrighted by Frank Heck, associate editor of AMERICAN POULTRY JOURNAL. They were compiled by Mr. Heck and embrace the desirable features selected from more than two hundred premium lists of as many different associations and contain the points suggested by his long experience as an exhibitor and secretary of a prominent association. With these any number of financiers can without difficulty start an association and will find it easy of successful management. This constitution and by-laws and rules and regulations will be sent absolutely free of charge to all who request them and we shall also be pleased to give any special information which may be desired. This offer is also made to old associations whose rules are incomplete and we hope that none who are in position to make use of them will fail to ask for them. Every exhibitor knows full well the annoyance and oftentimes loss which are occasioned by improperly conducted shows and the failure of the association to have established rules to provide for the many questions which naturally arise. Officials of the associations are also aware of the unpleasant results viewed from their position, and it is for the purpose of harmonizing these objectionable features and a desire to be of real help to poultrymen generally that we make the above offer.

## American Poultry Association Meeting.

For some reason there has been a delay this year in the selection of the place where the annual meeting of the American Poultry Association will be held. This is to be decided by a vote of the executive committee which has not yet been taken. There seems to be much rivalry between two or three associations for the honor of entertaining the A. P. A. A movement was started sometime ago to have the meeting held at Buffalo during the show at the Pan-American exposition but as this would be rather early in the season and would also preclude the possibility of another city getting it which is working hard for it, the scheme has been modified and the idea now is to hold a special meeting at Buffalo and the regular meeting elsewhere later. President Kimmey has been requested by more than the required number to call this special meeting and will of course be compelled to do so unless the requests are withdrawn, which we are informed is not at all improbable. Buffalo probably wants the regular meeting or nothing and this will hardly be conceded without a fight.

## Shape vs. Color.

Mr. C. S. Whiting, Secretary-Treasurer of the American Indian Game Club, calls attention in his very interesting article this month on culling Cornish Indian Games to the general lack of appreciation of shape in exhibition birds of all varieties. We believe that this applies with more force to the younger breeders or those who have not become sufficiently well posted to correctly judge of shape. It is much harder to fix in one's mind the standard shape of any breed than the color, because correct color can be more easily demonstrated than shape. In some cases, as for instance the Plymouth Rocks and Wyandottes, this is so clearly evident that many experienced breeders seem to fall far short in their judgment. The White and Buff Rocks and White and Buff Wyandottes especially come under this head. The Plymouth Rock is longer in neck, back, tail, body and legs than the Wyandotte, and is not so compactly built. But the tendency of both breeds to vary from ideal shape is the means of producing specimens of both that are fairly good representatives of either, with the ex-

ception of the comb, and when the Wyandotte comes with a single comb, which is by no means uncommon, it is entirely possible for it to win in the Plymouth Rock class, and we have known cases where it has. This calls to mind a case which came under our observation last winter. A prominent breeder of Buff Wyandottes found a single comb specimen amongst his youngsters, and being fond of practical jokes, he slipped it into the yards of a fellow fancier of Buff Rocks who resides in the same locality. The chick grew and thrived and developed into as fine a Buff Rock as one would wish to see. It was considered by the Buff Rock breeder as one of his finest specimens and was in due time entered at a prominent show, where competition was exceedingly strong. It was the consensus of opinion of breeders and the judge that the bird (a pullet) would surely win first, but while being scored a trace of white was discovered in the ear lobe, which of course disqualified it. This is not necessarily a reflection upon the quality of the stock of the Buff Wyandotte breeder, as it may occur in the best flocks, and the fancier has captured many of the creamy prizes at the larger shows. It simply emphasizes the fact that greater care should be exercised in selecting breeding birds and that a closer study should be made of standard shape. In the case of ties, where one specimen is better in shape sections than the other, we believe in allowing the one of best shape to win, and this is the rule followed by a majority of judges. Defects in shape should be discounted heavily, as one method of impressing its importance upon the minds of breeders. It has been aptly and truly said that "shape makes the breed and variety the color." The breeder who takes this as his motto will attain greater success in a shorter time than will his less careful fellow fancier.

## The Need of Reliable Information.

It must be plainly apparent to even the beginner in the poultry business that there is room for much improvement in the matter of instructing the amateur. If one can appreciate the humorous side of things, he will find the poultry business a most fertile field, where misinformation and ridiculous statements are abundantly found. This is a positive injury to the industry and tends to lessen the confidence and respect which the poultry press should receive. These unfavorable conditions could be largely eliminated if all publications exercised proper diligence in editing the copy received from writers. Rearing standard-bred poultry is in some respects a peculiar work in that the amateur is often led astray by circumstances which to his untutored mind suggest theories which seem entirely plausible, but which in reality are the reverse of his conclusions. It is an easy matter for him to get his ideas exploited in a number of journals and the information is accepted by those eager to learn and who have not advanced far enough to have demonstrated the truth or falsity of the statements. A most noticeable instance as illustrating the point we make, is the various statements relative to the time when chicks should receive their first feed. This time has been fixed at from 24 hours to one week after the chick leaves the shell. These are of course the extremes, but those who are supposed to know variously estimate the time within these limits. This is a point upon which there should be no guessing. If a chick needs no food until the yolk of the egg has been absorbed or digested (which is undoubtedly true), then there should be some way to arrive at the time definitely, and the information given to the fraternity. Here is an item for the experiment stations to consider and thereby disseminate information of real value, instead of the stuff which, with few exceptions, emanates from this source. There are dozens of other questions of equal importance, and as much in doubt. Writers should remember that it is unwise, inconsistent and an injustice to rush into print with ideas which they have not proven to be correct, unless they are given as ideas alone. We have occasion to correct many articles for this reason, and many are wholly rejected. As an evidence of how far a good man can go wrong, we repeat a statement contained in an article sent us recently. The writer said: "I can give chickens the roup by feeding them mash feed for ten days." He should know better, and probably does, but allowed his prejudices to get the better of his good judgment.

## The Principles of Breeding

We know of no other vocation in which the majority of those engaged in it are as heedless of the fundamental principles involved as is the case with the poultry business. Nor do we call to mind any in which these principles apply with more force or have more influence for good or bad results. From among the thousands engaged in rearing Standard bred poultry, the number who scientifically and intelligently mate their birds is ridiculously small. The hidden forces and life principles which determine the characteristics of the progeny of our breeding birds are as fixed as the law of gravitation and as much to be reckoned with as life and death themselves. So little earnest thought and attention has been given the matter that a literal interpretation of the phrase "Like will produce like" has become commonly accepted as truth and the child-like faith exhibited by the average poultryman in the certainty of results along a desired line without due consideration of the characteristics of the parent stock, is wonderfully great. In the face of the most convincing evidence each season of the unreliability of our methods we continue to blindly mate our birds with outward appearances as the sole guide and with never a thought of the past breeding and the latent characteristics of the specimens so mated.

Die by being lousy than from any other cause. You can talk about improper care and feed, lack of green food and grit, but, when looking for the root of the trouble, look for lice, and when you find them, look into the merits of Lambert's Death to Lice Remedies.

Rev. H. H. Purrington, Mt. Vernon, Maine, writes: "We all use Death to Lice and find it most satisfactory."

The Norton Poultry Yards, Dallas, Texas, writes: We have been using your Death to Lice for the past four years and it has given entire satisfaction."

**More Chickens**

have head lice than most poultry keepers realize. Some think that these little pests are pin feathers on the top of a chickens head and do not take the trouble to examine them closely until the broods begin to die off. One Massachusetts fancier says that it cost him hundreds of dollars to learn this. Death to Lice Ointment is made especially for the extermination of these little blood suckers, without injury to the little chicks. 100 doses 10c, postpaid.

**More Chickens**

than should go into two coops are often crowded into one. The lice will then crowd into these small quarters and assist to make the nights long, hot and miserable. The little mites or spider lice crawl out of the cracks and crevices and extract more blood from the chicks than they can make during the day.

Chas. L. Evans, Wood River, Neb., writes: "I have given your "'Special'" a thorough trial. I had a henhouse that was polluted with mites. I mixed 4-oz. box of Special to one gallon of white-wash and gave it a thorough white-washing. I now defy anyone to find a louse about my hen house."

**More Chickens**

properly cared for, mean more money. Proper care means a liberal use of Lambert's Death to Lice Remedies as well as suitable food and housing. No poultry keeper ever failed because he put too much money into Death to Lice. Many fail because they do not keep their flocks free from vermin. The most successful, money-making poulterers are those who use the most Lamberts. We have remedies for all kinds of lice, on anything and everything. We put it up in all sizes of packages to suit all kinds of people. We have all kinds of good testimonials as to its efficacy.

**PRICE LIST:**

Death to Lice Powder, 10c and 40c by mail; large sizes, 50c and $1, by express from here or nearest agency.

Death to Lice Ointment, 10c and 25c, by mail.

Death to Lice Special, 10c and 40c, by mail.

☐Sample of one each of the above 10c sizes at one time 25c.

Death to Lice Liquid, 1-qt. 35c; 2-qt. 60c; 4-qt. $1, from here or from nearest distributing point.

A 64-page illustrated book mailed free.

**D. J. LAMBERT, Box 303, Apponaug, R. I.**

**WANTED.**

To do this we will sell some fine breeding birds at prices which are far below their real worth. Special low prices on **PEKIN DUCKS.** As you doubtless know,

***Our Pekin Ducks, White Wyandottes and White P. Rocks***

are unexcelled by any flock to be found. Tell us what you want, and let us quote prices.

F. M. POLLARD. GEO. H. POLLARD. **POLLARD'S POULTRY FARM, South Attleboro, Mass.**

The evils of inbreeding have been so magnified as to greatly influence the production of better birds in a most unfavorable manner and much that is written upon this subject is wide of the mark and conclusions are arrived at and theories advanced that are not the results of practical experiments and are not substantiated by facts. We wish to call attention to the article in July number entitled "Hereditary Tendencies," by Mr. E. C. Huffaker; also the communication in this number upon "Selection," by Mr. J. E. Taylor. Either of these articles is worth more than the price of a year's subscription to AMERICAN POULTRY JOURNAL to every poultryman who is really anxious to raise good birds and improve his stock. The breeder who cannot read them with pleasure and profit and consider them of more than passing interest has in our humble opinion missed his calling and his birds will take a back seat when in competition with those of his more painstaking competitor.

# Old Capitol Poultry Yards

**HENRY W. DENBO, Prop., Corydon, Ind.**

## An International Show.

In the department devoted to shows and specialty clubs our readers will find a notice of an international show which is to be held in England Dec. 18, 19, 20, in this year. This enterprise is worthy of more attention than it will receive. We doubt if American fanciers will become sufficiently interested to send even a few birds, but the fact remains that a show of this character, if properly conducted, would be of great benefit to the fanciers of both countries. It should be specially interesting to Americans for the reason that English fanciers do not hesitate to pay long prices for really meritorious birds, and our foreign trade would be greatly increased.

In addition to this a friendly spirit of rivalry would be fostered which would serve to unite more closely the interests of all concerned and would constitute a long step in the direction of an international standard. We would be glad to see an organization formed whose object and purpose would be to evolve and promote a scheme with a view to consummating plans which would bring about these desirable conditions.

—o—

Oshkosh, Wis., June 20, 1901.

*Mr. C. A. Porter, Flat Rock, Ind.*

DEAR SIR: I have good news for you. I received the fifteen eggs from your pen No. 1, B, on May 30 and put them under a hen on the same day at noon. She broke one of the eggs the first time she came off, which left fourteen and this morning she brought off fourteen as fine healthy, plump, Barred Rocks as were ever hatched. You can imagine how pleased I am. Wishing you all the success you can have, for your square, honorable dealing is something you cannot always get, I am, Yours truly,

*F. B. King.*

We wish to call attention to the advertisement in this issue of Jesse E. Morgan, Lemont, Ill. Mr. Morgan's productions are Sanitary Houses and Coops. Housing of birds is one of the most important items to be considered by poultrymen, and neglect and lack of proper precaution in the matter is the result of much loss, both in money and in stock. For best results it is absolutely necessary that the birds be properly housed. The coops and houses built by Mr. Morgan are up-to-date in every respect and the prices are as low as a good article can be sold for. They are lower than breeders themselves in many instances pay for inferior structures when building them themselves. We would advise all our readers to send to Mr. Morgan for one of his circulars, describing the coops and houses, which he has placed on the market.

Mr. J. D. McCarty, Box 3450, Atlanta, Ga., in his card in this number of A. P. J. offers his sixty-acre farm for sale. It is in a most desirable location, ten miles from Atlanta and one-half mile from Clarkston. There are eighteen breeding yards and houses on the place. The water works system places fresh water in each yard. There is an abundance of fruit and the farm is an ideal one for poultry. There are several breeds on the place at present, and a fine patronage has been built up. Our readers who are looking for something of this kind should not fail to read Mr. McCarty's ad and correspond with him regarding the matter. He will send catalogue and other detailed information upon request.

Mr. A. W. Davis, of Taunton, Mass., has a change of ad in this number. He will have three hundred youngsters ready for the fall trade by October 1. He has forwarded us feathers from some of his best Barred Rock, Brown Leghorn and Rhode Island Red breeding birds, and, judging from these feathers, we would think that his breeding stock has been such as can be relied upon to produce winners.

Now is the time when all breeders will be wanting leg bands, and we wish to call attention to the ad of the Wiggan Mfg. Co., Custar, Ohio. This firm manufactures as good a leg band as there is on the market. The prices are very reasonable and are, in fact, as low as a good band can be sold for. They can be purchased in hundred lots for $1 a hundred. This price includes three initials, etc., stamped on each band.

The Carbolineum Wood Preserving Co., Milwaukee, Wis., are sending out circulars, containing testimonials from the most reliable poultrymen and farmers in the country, who speak in the highest terms of Avenarius Carbolineum as a lice and mite exterminator. The following is a sample:

Fairfax, Minn., Nov. 22, 1900.

After using several remedies against vermin without success, I can now recommend Avenarius Carbolineum to everybody as the best means to exterminate vermin in poultry houses. I find it to give the best of satisfaction.

*E. A. Kirschke.*

Mr. Norman Baughman, of Glensbaw, Pa., informs us that he will discontinue breeding Brown Leghorns and he offers for sale a pen of ten young hens and the second prize cockerel at Pittsburg last winter for $25. He states that the hens are all very fine and a bargain. He also offers a pen of eight hens and a grand cock bird for $20. He paid half this amount for the male bird. This seems to be an unusual opportunity to get some excellent Brown Leghorns at exceedingly low prices.

The success of an incubator or brooder depends very largely upon the lamp used. Many of the leading manufacturers have adopted Oakes' Hydro-Safety Lamp, which obviates all danger of explosion, prevents smoke, saves oil and requires no attention. A water jacket keeps the burner always cool so that no gas is generated.

If your incubator or brooder is not supplied with this lamp, it will pay you to send to L. R. Oaks, No. 6 Sixth street, Bloomington, Ind., for free catalogue of all incubator supplies.

Mr. T. E. Orr, proprietor of Beaver Hill Poultry Farm, Beaver Hill, Pa., has placed a lice killer upon the market, which he guarantees fully. He experimented with it many years ago, but has perfected it within the past year on Beaver Hill farm. The fact that Mr. Orr's name is connected with it is ample evidence that the preparation will do the work claimed for it.

S. B. Johnston & Co., Boggstown, Ind., write us that they will close out all their Buff Wyandottes at $1 each, if taken in

lots of five or more. This firm and their reputation for high quality and fair dealing is so well known that it is not necessary to make mention of the fact except for the benefit of those who are new in the business. Messrs. Johnston & Co. are the breeders and originators of the National strain of Bronze turkeys, which are remarkable layers and of great size.

TUSTIN, CAL., June 15, 1901.

*Mr. Page.*

DEAR SIR: The eggs I got from you were O. K. I got nine chicks. Eight of them were fine. One of them is rather small, but it is growing fast and is gaining on the others. Many thanks to you. Very truly yours, *A. R. Gearhart.*

The above testimonial is one which was received by Mr. H. D. Page, Ira, New York, whose advertisement will be found in our columns. Mr. Page has a reputation for sending full value for the money and for pleasing his customers.

The fall fairs are here and it takes great big, early hatched birds to win. R. E. Jones, Flat Rock, Ind., is offering a fine lot of Wyandottes and Seabright bantams that are sure winners; big bone, good shape and color; the kind that brings home the cash. He also has a fine litter of Scotch collie puppies, sired by Ch. Wellsbourne Wonder, he is offering at low figures. Parties in need of anything in his line will do well to get his prices. See ad. in this issue.

## TO CALIFORNIA THROUGH COLORADO.

By all means the most interesting way to reach California is via Denver and Salt Lake City. We have selected that route for our personally conducted twice-a-week excursions, planning the train schedule so that all the magnificent Colorado mountain scenery is passed by daylight. These excursion parties travel in Pullman tourist sleeping cars, which are thoroughly comfortable, contain every convenience and cost much less than the ordinary Pullman sleeper. The rate for a berth holding two, from either Chicago or St. Louis, to California is only $6. Kindly write for particulars. Inclose 6 cents in postage for our beautiful seventy-two page book on California, full of illustrations.

Address P. S. Eustis, General Pass. Agent C. B. & Q R. R., Chicago, Ill.

## PERFECT CHICK FEED.

Warren, R. I., May 20, 1901.

Mr. W. F. Chamberlain,
Kirkwood, Mo.

DEAR SIR: With the greatest of pleasure I write you as to the merits of your Chick Food. I have been in the business for the last seven years and have a large plant, in fact one of the largest in Rhode Island. I have lost thousands of chicks when they were about ten days old, and the trouble was always bowel trouble. I knew it was the feed, but I could not find out what to use to stop it.

About two or three months ago, I was in Boston, buying some of the Cyphers Brooders, and the party I was buying them of, asked me how my young stock was coming on. I told him that I lost a great many, and he said, "Why don't you try Chamberlain's Perfect Chick Food?" I had no confidence in it and told him so, but at all events, I took two sacks, two hundred pounds, and after I had fed it a few days my chicks stopped dying, and I began to wake up to the fact that it was just what I had been trying to find, and I have an order in now for one thousand pounds.

"Too much cannot be said in favor of your feed. I have 2,700 chickens and 1,600 eggs in the machine and they will be fed on Chamberlain's Perfect Chick Food when they see the light of day. Truly yours,

*A. F. Cole, Bayside Poultry Yards.*
*Warren, N. Y.*

## COMPLETE CATALOGUE OF POULTRY SUPPLIES.

The Excelsior Wire and Poultry Supply Company, 26-28 Vesey street, New York City, has issued what we believe to be the largest and most complete catalogue of poultry supplies ever published. It is a book of 130 pages, 8 by 10 inches. In it is listed everything useful to a poultryman, from a leg band to an incubator, and the lowest prices are quoted upon each article. It also contains an egg record for keeping an account of the number of eggs laid by a flock of birds. Every breeder should have one of these catalogues, whether he has immediate use for it or not. It will be sent free to all applicants who state that they saw notice of it in AMERICAN POULTRY JOURNAL.

## HATCHED IN A FREIGHT CAR.

*Editor American Poultry Journal.*

I have thirteen chickens, now ten days old, in my brooder that were hatched in a case of eggs consigned to Wendal & Briggs, 250 South Water street, from Missouri. The eggs were in a freight car and were hatched en route to Chicago. They were about one day old when they got to Chicago. This discounts all incubators. Eh! *Jay Burdick.*
*Chicago, Ill.*

## White Rock Poultry Farm.

In this issue we present some views taken at White Rock Poultry Farm, located about fourteen miles from Chicago on the Elgin branch of the C., M. & St. P. railroad. The genial proprietors of this interesting place, Eddy & Eddy, are not new in the poultry business. Mr. E. B. Eddy, who is now in his thirty-fifth year, has spent nearly twenty years in experimenting with the leading varieties and has decided that the White Plymouth Rocks are the best for their use and they breed that variety exclusively, believing that it is better to devote all of their attention to one kind of fowl and have that kind good. They have bred White Rocks for the past five years and have developed a winter egg laying strain of very fine birds.

White Rock Farm consists of ten acres adjoining the railroad right of way and is almost opposite the station at the little town of Manheim, Ill.,; the main poultry house is of the scratching shed variety, 180 feet long, containing five sections of ten separate roosting rooms with scratching shed attached. These ten pens open into as many yards or runs which are eighteen feet wide by 125 feet long; they are all sodded and have trees planted in them. The fronts of the scratching sheds are protected in cold, stormy weather by canvas stretched on frames which swings in and upward so that on pleasant days the hens may enjoy the sunshine and fresh air. The house is built of good dressed lumber throughout and drop siding on front and back of roosting rooms; the inside is lined with a patent lining paper over which is placed heavy two-ply tar paper; the roof is covered by dressed 12-inch boards, on which black diamond 3-ply roofing paper is used, this covered with two heavy coats of tar and that covered with gravel.

The roosts and drop boards and in fact all of the fixtures are movable. The house is thoroughly cleaned twice a week and sprayed with Lee's Lice Killer. The scratching sheds are filled in with cinders, with a covering of about a foot of earth. Good light is furnished by a double window in each compartment. The chickens therefore have light, dry, warm quarters which is so essential to their welfare. This farm is conducted with care and system, Mrs. Eddy being an important factor. She is one of those who delight in better poultry and more of it; she is assisted by the farm superintendent, Mr. Frank Hawkins.

E. B. EDDY,
Proprietor White Rock Poultry Farm. Manheim, Ill.

Mr. Eddy is a member of the National Fanciers' Association; also a member of the Advisory Board of the American White Plymouth Rock Club. He is well known to the poultry shipping fraternity as he is now and has been for nineteen years connected with the United States Express Company at Chicago as solicitor and special agent, and has been largely instrumental in securing better service and rates for poultry shipments. He feels that he is now ready to enter the field of the poultry business and will introduce his birds through the advertising columns of the poultry press.

## Success with Houdans.

*Editor American Poultry Journal:*

We herewith present a few thoughts for your most excellent journal in hopes that others seeing may go and do likewise.

Living in a country town of 2,500 inhabitants our space is limited, having a lot 70x300 feet, with brick house 22x36 feet, with frame L 18x48 feet; also barn 52x24 feet, with one poultry house back of barn 8x20, with scratching sheds at each end 10x16 feet; one house in barn, 12x22, both of which are plastered with "wood pulp plaster," which when dry is as hard as cement, in which we can drive nails without injury to same. Our spare ground is sown to rape and rye and part in grass for summer pasture.

One year ago last January we had eight hens and a cockerel from which we raised to maturity 83 chicks and ate eggs galore, and chickens, when we wanted them, which was quite often; as Mrs. F. A. is exceedingly fond of fowl, and as the kind we raise are exceedingly fine as a table fowl, we lost a great many in that way. On November 20 we had Mr. Charles McClave respond to a call (accompanied by the $1) from us to look over our little flock and tell us where we were going to land, as we, in our innocence, had concluded that we were "it," and being enthusiasts we did not want to wait for the show room and Mr. Butterfield to let us drop. Fortunately, out of 35 pullets selected by ourselves 15 scored about 90 points and eight cockerels above 90 points, and then we hugged ourselves and exclaimed, "We are in it."

Now, the "plans of mice and men gang aft aglee" did not obtain wholly in our case as the sequel will show, for after our show, which occurred in December, with "Butterfield" as judge, with our chickens more mature, we came off with flying colors with scores that we have not seen equaled under "score card" in 1900 and 1901 on hens and pullets.

Now as to the results of our year's success from June 30, 1900, to June 30, 1901. Out of our last year's flock with the assistance of that genial judge and breeder, Mr. Frank McKenzie, we mated two pens of 15 each, 26 of which were pullets, three four-year-old hens and one ten-year-old hen; from the balance we

BLUE TINGE, JR.

Barred Rock Cock. Bred and owned by Chas. B. Sayers, Waynetown, Ind. This bird is one of the best in America. He combines good size, shape and color to a remarkable degree and has produced many winners.

sold for breeding and on the market for $42. From the 30 retained for our own purpose we have gathered from March 1 to June 30, 1901, 2,440 eggs, or an average of 20 eggs per day for 122 days, notwithstanding some of these hens commenced to lay in December last. "How is that for Houdans?" Our chickens in early hatches were not a success in numbers, but they show by their growth the desirability of the early chick, but we succeeded in April and May in bringing out a goodly number which we have placed on farms to be kept until November 1, and when they are brought in will have a competent man go over them and the result made known through the AMERICAN POULTRY JOURNAL. Our surplus eggs we have been able to sell to private families at an advance of 2c per dozen over market price, which has averaged about 14c per dozen. Eggs sold for hatching and in market since March 1 amounted to $39.42. The average weight of these eggs has been 28 ounces per dozen. During winter our chickens had green cut bone twice a week, wheat, oats and corn, with plenty of clover hay, with twice a week the dry offal of three families chopped fine and warmed and they have been remarkably healthy on the kind of feed and care received.

In the last ten years we have handled the White Rocks, Brahmas, light and dark, Buff Cochins and Cornish Indians, but the whole lot of 100 put together would not either in beauty, profit or pleasure take the place of our 30 Houdans, and we cannot see why more town-lot people do not go to this most excellent and handsome fowl. The cost of feed alone drove us to them.

If this meets the approval of the editor of AMERICAN POULTRY JOURNAL and is not tickled to death by critics we may come again some time and talk more about this most neglected bird that should be nearer the top of the birds that crow a good morning every day in the year.

# The BELGIAN HARE.

(From *Chasse et Peche.* Translated by Dr. H. P. Clarke.)

WE have just visited at Ghent some fanciers of pigeons, canaries, Flemish Giants, and Belgian Hares. We no longer say "leporides," for the French and English scientists have declared that this animal does not exist. These scientists have no doubt that in denying the existence of a cross between the rabbit and the wild hare they have rendered a notable service to the Belgian producers, commercially speaking. The Americans have written that the flesh of the leporide—beg pardon, we mean Belgian Hare—surpasses that of chicken; that it can be produced for 5 cents a pound, and that there is $10,000 profit to be made in breeding this prolific rabbit.

It rains letters in the consulates. The Americans send their agents to Ghent for to buy there all the Belgian Hares and all the Flemish Giants which bear the slightest resemblance to a hare. They are all astonished that they are asked only $5 to $10 for each animal, and they add: "I will buy, but if you can put in a pedigree I will pay double price."

Mr. de Keghel contends that the Giants comprise at least four varieties: the short, the long, the fine, the coarse—as regards form. The color differs just as much. To come back to the breeding in threes, we must admit: 1. The standard Giant, hare colored. 2. The Steenkonyn, short, strong in the back, without dewlap, richly colored, returning toward the wild rabbit. 3. The Giant, very large, very long and becoming too pale, too yellow. To meet this, from these two extremes will proceed the most perfect specimens.

The time has come for revising the Standard of the Flemish Giant. We were the first to protest against the production of a giant rabbit, evenly colored iron gray. The delegates from the different societies of Ghent have decided that it is most important to preserve the breed, that the colors gray, black, rufus, and the white under the tail and belly must be as intense as possible.

There have been preserved classes for the dark, the iron gray and the evenly marked gray—in other words, for the specimens lacking the white under the belly,—because the Germans like these and will pay a dollar more for such. This craze of the Germans in coming to Ghent to encourage the breeding of a solid colored rabbit, would have ended in our losing the breed if we had not discovered the danger which menaced it and still menaces.

The Standard has been much discussed in the German and Hollandish journals, but naturally by people who understand nothing of Belgian breeding. This is no sign that there have not been written some more or less sensible things which it would be well for us to take account of in preparing a more complete Standard for the use of foreigners. Any one who really knows the giant rabbit of Flanders sees more in one half minute and judges better than the foreigners who have studied all the books and all the journal articles published. Furthermore, we should have to listen to the opinion of the English, and to be logical, to that of the Americans also.

When we proposed to disqualify the solid-colored rabbits, it was said in reply that the best breeding is that of which the produce sells at the highest price, that which brings the most money. According to our idea, the fancier, the earnest judge of the preservation and improvement of the breed, must be listened to before the merchant. We have repeated it again and again, we have not the right for the mere price of a dollar a head, to permit to be lost a breed whose excellence cannot be surpassed. Moreover, we have been heard and thanks to the subsidy, small though it has been, granted by the National Federation, the breeding animals of the correct type have been preserved.

We ask of the fanciers of Ghent: The dewlap of the large females, ought it to be preserved as at present, ought it be reduced as much as possible or suppressed altogether?

This is how we have judged up to the present time, in accord with M. de Keghel. The male of one year must not have any dewlap; that of the female must be as small as possible, square and without fold or twisting. A dewlap twisted or double places the animal in the second class. The reason for this is that in breeding from a male with a dewlap or one whose mother had a dewlap too much developed, and a female with a large dewlap, the progeny would have pendant ears.

If the Germans offer a dollar more for a rabbit off-colered and with dewlap, on the other hand the Americans will pay any price asked for every giant rabbit the color of a hare intensified and without dewlap.

LORD LIPTON II.

Score 95¾. He is especially valuable in that his young invariably inherit from him his exceeding richness of color and his superb shape. Owned by United States Belgian Hare Company, Marshall, Mich.

## Money in Belgian Hares.

You can make more money raising Belgian Hares than in any other branch of the live stock business. If your poultry is not paying a satisfactory profit, raise Belgian Hares and you will be satisfied. If you have a little time to spare from your poultry, try Belgian Hares and increase your profits. They are easy to raise and cost little to feed.

Money making stock for sale at the following prices: Standard pedigreed breeders, $4 to $15 each; youngsters from $2.50 each up. Meat stock breeders, $2.50 to $5 each; youngsters from $1.25 each up. Correspondence solicited. C. W. LEISTER, Wauwatosa, Wis.

# BELGIAN HARES, Dirt Cheap.

Rare opportunity. Good stock at prices that will surprise you. $3, $5 and up for fancy stock. Business keeps me out of the city. Am open for a reasonable bid on a big lot. **W. T. GALLAWAY, 496 LaSalle ave., Chicago, Ill.**

We do not know what price we are going to be able to ask for them, but we do know that for specimens of Belgian Hares bearing greatest resemblance to the ordinary wild hare, they have offered and paid $200, $500 and even $750 each.

The questions of color and the suppression of the dewlap become then the main points to be considered at Ghent; so much the more since the one dollar premium of the Germans tends to the deterioration of our national breed, while the thousand franc premium of the Americans will probably urge on its improvement.

Our personal opinion—which has nothing scientific about it, since it is based only upon suppositions—is that the *lieore belge*, the Belgian Hare of the last Standard, is merely our old time leporide perfected by selection for the exhibitions in England, the selection following the type of the ordinary wild hare, in order to combat the natural tendency to revert toward the rabbit; that the Belgian Hare such as it has been in England during the past ten years, that is to say reddish brown, is the result of crossing the leporide of Belgium with the wild hare of Ireland, the *variabilis*, which is white in winter and brown in summer, or the cross of the leporide with the ordinary English rabbit; that the Flemish Giant rabbit is not a rabbit of pure blood, but one in which there is an infusion of blood from the wild hare.

This estimate coincides with that of the English with one exception. This exception consists in this, that we see in the leporide as well as in the Giant the presence of the blood of the wild hare, while the English deny the existence of any cross, and see in the Belgian Hare and even in the Belgian Giant but one and the same breed of rabbits. In this we are pretty nearly in accord, inasmuch as the English say among themselves and to the Americans, that there came to them at the same time (which is true) from Belgium one breed of rabbits comprising two varieties: one bred for its resemblance to the hare, the other bred for weight and size.

Our recent trip to Ghent proved exceedingly instructive. We had the opportunity of comparing three species of leporides. We commenced by seeing again one of the leporides of Wachtebeke of which we have often spoken. M. Pulinckx made the mistake of selling one to go to America, but he kept the one with the fur of chinchilla. Just now this fur is changing to the true fur of the hare, that is to say, yellowish brown at the end upon a foundation of dark gray. Alongside of this we were able to admire a couple of Belgian Hares returned from England after twenty years of careful selection in breeding.

We must admit, the English are great breeders. These Belgian Hares at first glance remind us of the old time leporides of Ghent. But never have we possessed, raised or sold a single specimen possessing this perfection: head long, grand eye dark with black lashes, long ears upright edged with black, long and fine red forefeet, grand tail horizontal, hind feet long and strong. The bone from the ham to the knee is so long that the thigh is higher than the back. There is no white upon the front of the thigh nor the upper part of the paw. Any one would say a hare three-quarters grown. The only difference consists in this, that the wild hare has the fur of the back yellowish brown upon a black base, while the Belgian Hare has the ends of the hair black upon a rufus red base. However, even this defect could be corrected, for as we have just said, the chinchilla leporide of M. Pulinckx has upon its back the true fur of the hare. We have seen some other leporides sent from France; they resembled likewise the hare and had the distinction of having the ears a little short and at the ends very large and perfectly rounded. Our first impression upon seeing them was that in the eyes of an exhibition fancier these must be worth as many sous as those of England were worth francs.

At Lille we had occasion to judge some leporides guaranteed hare and rabbit, but these were completely returned to the rabbit. On the other hand we judged some classes of rabbits declared to be crosses between domestic rabbits and wild rabbits (probably the offspring of leporides) and these last had much more the characteristics of a hare-crossed rabbit. The Belgian Hare is then an animal quite variable, presenting three characteristic types: rabbit, hare, and intermediate. It is expedient for the exhibitions to adopt the English standard, that is to say the bare type, and to cultivate this.

The variety Flemish Giant is, according to the English, raised entirely for its great size. In fact a specimen of this race should weigh three kilogrammes (about 6 lbs. 9 4-5 oz.) at the age of three months; furthermore it gains a kilogramme per month up to the sixth month; but to acquire the seventh kilo it takes three months or more. The Ghentish fanciers accomplish this by special food and treatment.

## CROOKED BREAST BONES.

WHAT is the cause, and what is the remedy? These were the questions I was asked recently by a man who has kept fowls for some time, but who cannot breed all his chickens with straight breasts. In a few words, the cause is wrong feeding; the remedy, proper diet. But let us look fully into the subject. It is certain that some breeds are never crooked-breasted, and that others always are. Some fowls roost on the ground, and their breasts are in the shape of the letter S; others will roost on a walking stick, and their breasts will remain as straight as a line.

There are various theories abroad, and, perhaps, one of the most common is that the complaint is hereditary. It is to a certain extent. As an experiment I once shut up two crooked breasted hens, and kept their produce separate. They were deprived of perches, being allowed always to sleep on the floor of the house, which was kept scrupulously clean and dry. One brood was artificially fed and forced, the other was placed near a wood, and after the first month had to forage for itself. One lot was entirely crooked breasted; in the other not one with this defect could be found. The weak constitution in the one was fostered by a forcing diet; in the other it was strengthened by natural food.

It is not wise to look to crooked breasts and such deformities for the best health, so such birds should be kept solely for table eggs, or fattened and killed for home use. They should not be bred from, unless their progeny can be run wild. I have never yet seen a wild bird with a crooked breast, and I think the reason is the growth of bone is more gradual than is the case with domesticated fowls. Too often it is the aim of the producer to get quick maturity with great size, and to this end chickens are highly fed. Nature is forced and overdone, and there is undue growth of body.

As in human beings, so in birds; there is such a thing as undue growth, consequent on overfeeding, a too rapid increase of weight out of all proportion to the development of bone and muscle. Fast grown chickens are weak, and often too heavy for their half-formed leg bones. This induces them to rest on their knuckles on the ground by day; but at night when perching their legs are not strong enough to hold them steadily on their perches, and they are obliged to allow their breasts to rest. The cartilaginous bone of the breast is susceptible of change, and if the rest be not soft, this bone takes the form of the perch.

And that brings us to a second theory, a common one, too, viz., the shape of the perches. Some there are who consider that the width of perches used is an important factor in the cause of crooked breast bones, or perhaps more particularly indented ones. They tell us that when narrow or small round perches are used the trouble is more in evidence than when wide ones are utilized. But I have tried a large and flat perch on which the birds can rest without clasping, and I have found if the bones are weak that kind of perch is as injurious as a small round one. To my mind it is not so much the shape as the substance of the perch that does the damage.

In a wild state a fowl, as a rule, sleeps on the branch of a tree, and on one that can be grasped with ease. Where are the flat perches in a state of nature? Force birds to roost out of doors, and they will generally be found to roost where they can grip well. Visit a farmyard on a summer night, and you will find the fowls prefer the iron bars of a shed in preference to the wooden beams, or the spokes of a wheel to the shafts of a cart. And why? Simply because it is natural for the foot to grip when the leg is bent. All of us cannot keep fowls under natural conditions, so we should do the best we can; and what we can do is easy.

"Provide chickens with round perches, and covered with woolen cloth; they must not, however, be thicker than they can grip with ease." The advice is not by any means new, for as far back as 1793 it was given in an account of breeding and rearing Game cocks that appeared in the Sporting Magazine. Turkey-rearers are, perhaps, more particular about perches than anyone, and it is common to find cloth-covered or straw-covered rests where many turkeys are reared. But this question of perches is not so vitally important, and the great thing is to feed the birds properly.

The only way to get big birds is to let the growth be slow, so that large frames may be built up before the birds become fleshy. Provide chickens with plenty of fresh green food, give them earthworms and other insects, make them exercise, and feed them chiefly on grain, such as a mixture of barley and oats, and wheat. Allow them an occasional tonic of iron and a drink of lime water, and you will produce strong boned, big bodied birds, with plenty of muscle, the very best breeders, and free from crooked breasts or any other such deformities. Get the bones well grown, and they will carry any amount of flesh.

*W. in "Poultry," England.*

---

FAIRPORT, MO., May 27, 1901.

*Mr. George M. Leffel.*

DEAR SIR: I think it is due you that I should write and let you know what luck I had with my eggs. On their arrival here one egg was broken, and the hen under which I set them broke another. Out of the eleven eggs I hatched nine chicks, all of which are strong and hearty and two weeks old. I thank you for your fair treatment.

Yours very sincerely, *G. Charles Fisher.*

---

FOREST, IND., May 23, 1901.

*Mr. George M. Leffel.*

DEAR SIR: The eggs are received in first-class condition. I never saw eggs packed in better shape. The one sitting hatched ten as nice and strong chicks as you ever saw and I have saved every one up to date. Could not be better pleased. Yours truly,

*Ira N. Beard.*

---

ALBY, W. VA., June 4, 1901.

*Mr. George M. Leffel.*

DEAR SIR: The sitting of eggs I purchased of you in April hatched well. I have eight fine chicks, with which I am well pleased. When in need of more eggs or stock you will get my order. Yours.

*J. F. Estblack.*

---

PARIS, ILL., April 18, 1901.

*Mr. George. M. Leffel.*

DEAR SIR: Inclosed find $5.00, for which send the best eggs and as many as you can for the money. We bought three sittings from you two years ago and still have the stock, and intend to stay with you as long as we get what pleases us.

Yours respectfully, *George Henry.*

---

FREELANDVILLE, IND., April 13, 1901.

*Mr. George M. Leffel.*

DEAR SIR: I hatched fifteen chicks out of the eggs you sent me. They are all healthy and strong and hatched nearly a day ahead of time.

Thanking you for your honesty, I am, cordially yours, *Rev. C. W. Notter.*

# Signs of Prosperity.

**They Still Continue to Show themselves in Increased Numbers and to Unmistakably Indicate that the Past Season has been a Record Breaker and that the Coming One will be Fully Equal to the Past.**

[Never before in the history of the business have poultrymen generally enjoyed so large and lucrative a trade as they have during the past season. Breeders everywhere report many sales at good prices. Those few whose reports are not flattering must look for the cause as the result of conditions over which they alone have control, for it will be noted that their fellow breeders in the same locality have been successful to the greatest degree. Quite a number are adding new buildings to their plants and are in various ways enlarging their business, in order that they may be able to take care of their constantly increasing trade. These reports have been received in such quantities as to make it impossible for us to publish them all, and the late ones will have to be omitted. We give a sufficient number, however, to dispel all doubt from the minds of any who may think that breeding standard bred poultry is not a profitable vocation as well as a pleasurable one. We consider these letters the best possible testimony that can be secured. They are living evidence which cannot be impeached. One noticeable feature is that American birds are becoming appreciated and sought for by fanciers in other countries. A large number of our advertisers report foreign sales and this trade is growing all the time. We hope that our readers will give due attention to these communications and that any who are not enjoying a full measure of success will endeavor to change their condition by "reading between the lines" and following the course of those who have overcome obstacles and proven that prosperity is assured under proper management.—EDITOR.]

*Editor American Poultry Journal.*

DEAR SIR: In reply to yours of the 12th inst. will say I have had splendid success with my poultry this season. My stock was sold off early the past season, had excellent sales, shipping birds to all parts of the United States. I had a good egg trade in April and May; excellent reports from my customers all getting as many and more chicks than I guaranteed; have not had to duplicate a single order. Have had no reports of broken eggs. My young stock are doing fine; never had chicks grow better; have chicks weighing 3½ and 4 pounds each; some of my young cockerels are crowing. I shall dispose of all my Buff and White Cochins and Buff Rocks. I shall enlarge my plant and in the future will breed White Plymouth Rocks exclusively.

My White and Buff Cochins are extra fine, also my White and Buff Rocks. The prospects for our fall shows are good. Our Galesburg show last season has aroused an interest in poultry throughout the surrounding country, and we expect our 1901 show to be far better than last year. We attribute our good sales throughout all parts of the country to the great advertising medium, the AMERICAN POULTRY JOURNAL. Yours truly, *E. L. Famulener.*

*Cameron, Ill.*

---

*Boggstown, Ind., June 16, 1901.*
*George G. Bates, Editor.*

DEAR SIR: Your esteemed favor received and contents carefully noted. In regard to the season's work, will say that my trade this year has been very good. I have shipped the "Nationals" and their eggs to nearly every state and territory in the United States besides all over Canada and Mexico. The public is beginning to learn where they can buy the Bronze Turkeys with the greatest size, vigor and egg producing qualities combined in this country and they always win at the shows, too, without any trouble. Our business is more than doubled this year in eggs and we have been unable to keep pace with the orders. Our stock sales have almost doubled but we did not sell as many as we expected. The price averaged a little better than in former years.

Eggs have hatched well generally at home and in the hands of my customers, very few complaints having been received. I have had a great many reports from 9 to 11 poults from 12 eggs and our young stock is growing fine. I have some of the largest and finest poults for this time of the year that I ever saw. Our Barred Plymouth Rocks and Buff Wyandottes are fewer in number than in former years, but they are showing up grand in color and are growing to beat the world. We expect to have the largest number of first class birds, taking all three varieties into consideration, that we ever owned to sell to our customers this fall and winter. The young are more promising and are from the grandest matings we have ever had. Our home place was too small for our growing business and we sold it and located about three-fourths of a mile from the depot. Nearly every one says that our new place is the most beautiful in which to live anywhere in the surrounding country and it will be when we get it properly fixed up for our business with plenty of natural shade and running water most of the year. It is just rolling enough to be beautiful and adapted to poultry raising. When I get it fixed to my notion I want every one of the readers of A. P. J. who can, to come and see me. I will treat them the best I know how and my wife is a splendid cook; at least I think so. We expect to make this business our life work. There is a living in it, if a person works, and we like our pets and expect to enlarge our business and please our customers and do the square thing all the way through. Our motto is: "Do unto others as you would have them do unto you." The poultry business never looked brighter than now with more poultry papers and more breeders and more shows than ever before in the history of poultrydom. Very truly yours, *S. B. Johnston.*

---

CHAMPAIGN, ILL., June 15, 1901.
*Editor American Poultry Journal.*

DEAR SIR: Your letter asking me of my success this season in the poultry yard. I have had a splendid trade both in stock and eggs. Surplus stock all sold long before the breeding season opened up. Eggs hatched good, both at home and what was shipped away. Only had one complaint of a poor hatch of eggs shipped. I have between 600 and 700 chicks, all early hatched. I have lost quite a number of chicks in May on account of the cold, wet weather. I think the prospect for a big trade in good birds is good and the demand will greatly exceed the supply. I get all my trade through my ad in AMERICAN POULTRY JOURNAL, which I think is the best medium to reach the buying public. At some future time I will tell you how I manage my breeding stock and how I get lots of fertile eggs. The farmers of Champaign county all begin to realize that it pays to have better poultry and more of it. Yours truly,

*E. H. Epperson.*

---

CHENOA, ILL., June 17, 1901.
*Editor American Poultry Journal.*

DEAR SIR: We have had a good business this season, especially in eggs. We could hardly supply the demand and at various times we would have preferred keeping the eggs ourselves, although we obtained $5 per setting for most of them. Hatches were not the best in the early spring, but were better later on. Chicks have done better this year than ever before, the loss being less than 5 per cent and the Silver Wyandottes are showing some remarkably well laced birds, which

# $50 IN CASH PRIZES

## GIVEN BY

## *American Poultry Journal.*

### No "Strings" to Them. Everybody May Compete.

If you know anything about poultry you may win one of these prizes. We want you to tell our readers briefly what you know about one or more of the following subjects:

The process of molting. Care of the fowls during this period. What to feed and why to feed it. Is delicate color and gloss of plumage affected differently by different foods. If so, how and why? A general treatise on the subject of molting.

The best and most thorough explanation of line breeding, with a detailed plan for establishing a strain, a clear and concise statement of the principles involved in developing the desired characteristics of the fowl and embodying the results of too close inbreeding.

Preparing birds for the show room. Instructions which will enable the amateur to take advantage of the many little details, which add to show condition. How to feed and care for the birds during their close confinement in show coops.

Instruction to the beginner whose ambition is to get prominently before the public as a fancier and breeder and establish a paying business.

The best method of starting a market poultry plant. The amount of money necessary to purchase stock and the profit to be expected from the outlay suggested. The amount of ground, number and size of buildings required and suggestions in regard to economical and successful management.

How to advertise successfully. Points to be considered in selecting a medium. Conditions affecting an ad. and hints on the advantage of continuous advertising.

Has the specialty breeder greater chances of success than the breeder of several varieties, as regards prominence and high prices for stock and eggs? If so, why?

Advice on management of incubators and the advantage of their use even though hens are available for the purpose.

Success with brooders. How to feed and care for the chicks.

Rules to be observed in getting the highest percentage of fertile eggs. Hints on house room, feed, care, selection and mating, as affecting fertility of eggs.

## $25 For the Best Article.
## $15 For Second Best Article.
## $10 For Third Best Article.

The list of subjects has been selected with a view to covering a wide range, so that every breeder will find some subject with which he is familiar enough to write upon with a fair chance of winning. THE CONTEST CLOSES OCTOBER 1. All copy must be in our hands not later than this date. The articles must be original and not have been published before. They must contain not less than 1,800 nor more than 2,500 words. *The writer who covers his subject most thoroughly and presents it in the most comprehensive manner will be given first prize.* The prizes will be awarded by a disinterested committee, which will be announced later. We reserve the right to retain all articles sent in and to publish them, if we so desire, giving full credit to the writers. Those writers whose articles do not receive one of the three cash prizes, but which are published by us, will be given a copy of the Standard of Perfection and a two years' subscription to AMERICAN POULTRY JOURNAL. ..

These prizes are worth trying for. You can lose nothing but a little time and you may be one of the winners.

Prepare an article at once and send it in. Address

**AMERICAN POULTRY JOURNAL,**
**325 Dearborn st., Chicago, Ill.**

will be heard from next winter. I have fed a ration of corn meal, five parts; bran, one part with a little soda, and well baked, for breakfast, millet and wheat for dinner and corn meal dampened for supper, with several feeds of cooked potatoes per week; also a little concentrated meat in each morning's feed. The birds have free range on grass fields and have had remarkable growth. A great deal of interest is being taken in this section in thoroughbred poultry. Where there was one breeder last year, there is three this season, and it is getting to be a great industry. White, Silver and Golden Wyandottes seem to be the people's choice around here, and they are choosing wisely. I believe next show season will be a record breaker. Yours most truly,

*A. C. LeDuc.*

---

*Editor American Poultry Journal.*

DEAR SIR: Replying to yours of recent date will say that this season's business has been very satisfactory. While early hatches were poor, those later were good. I do not cater very much to the egg trade, and think that this is the last season that I shall ever bother with it at all (it being at best a very unsatisfactory business). I have out to date 200 youngsters, the oldest weighing 1½ pounds, and about 200 eggs under way.

We have recently organized and are now perfecting a county association to be known as the Cattaraugus County Poultry and Pet Stock Association, whose objects are to promote the welfare and growth of poultry and pet stock in this county. We hold a show at Salamanca, N. Y., some time this coming winter. Thanking you for the inquiry and wishing the AMERICAN POULTRY JOURNAL the success that it deserves, I am yours for thoroughbred poultry and more of it. *D. H. Foster.*

*Gowanda, N. Y.*

---

*Waterford, Wis., June* 14, 1901.

*Editor American Poultry Journal.*

DEAR SIR: Yours of the 12th at hand. We have had a good trade this spring on stock; sold all we could spare. Egg trade has not been very good. We made up for it by getting out a large number of chicks for the fall trade. We have some at the present writing that will weigh 3 to 4 pounds apiece. We will surely have some prize winners, as we have taken great care in selecting only the best for our matings this season. Eggs have hatched fairly well. The AMERICAN POULTRY JOURNAL is doing excellent work here amongst our farmers. A good many of them are looking for full-blooded chickens to improve their flocks. Yours respectfully,

*Halbach Bros.*

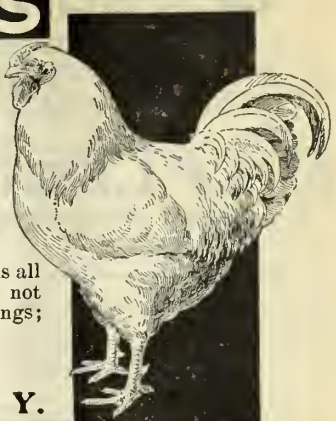
---

LACON, ILL., June 15, 1901.

*Editor American Poultry Journal.*

DEAR SIR: Referring to yours of June 12 we are pleased to report a very successful year, both in the sale of birds and eggs, and our ad in AMERICAN POULTRY JOURNAL has done its share introducing us to customers. Our hatches have been very good, both at home and with all customers who have reported. We give herewith what Rev. W. L. Cunningham of Vernon, Ill., who saw our ad in AMERICAN POULTRY JOURNAL, says in a letter of may 31: "I took a hen off today with eight Barred Rocks. I count this a very good hatch as three eggs were broken in the nest and three spoiled." He also says: "I have just seen Sister

# HIGHEST HONORS



were awarded my birds at the Rochester, N. Y. Poultry Exhibition 1901; we won against the hottest kind of competition, all first prizes in our class, besides specials. That's what you can expect of the

Majestic Strain **WHITE WYANDOTTES**

the handsomest, most profitable fowls in the world. My stock is all farm-raised from prize winners at the big Eastern Shows. They not only **look right,** but they **are right;** they come from proper matings; they are healthy and vigorous; they will make you money.

**Choice breeding and exhibition stock from this prize-winning strain at right prices. Satisfaction guaranteed.**

**C. S. WETMORE, Box 377, Lockport, N. Y.**

Jones and she is well pleased with her hatch as she has ten chicks from the thirteen eggs sent her." We also sold Mr C. a trio of Buff Rocks which he is well pleased with. Our plan for the future is to use nothing but first class stock and give all customers value received, as our motto is "Quality not Quantity" and "Do to others as we would have them to do us." The poultry business seems to be on the increase, but so many people think there is nothing to do but buy a lot of birds, turn them loose and gather in the eggs. The prospect for the Wenona show December 16 to 21, which is in our county, was never better, as quite a number of new breeders have already begun preparations for exhibiting there, as well as old ones who never were there before. With such men as U. G. McAdam and C. M. Turner as secretaries and D. T. Heimlich as judge, it cannot help being a successful show. Also the Peoria show last week in December and first in January will be a good one with Theo. Hewes as judge. As our letter is already quite lengthy, we close by wishing all success, especially AMERICAN POULTRY JOURNAL. Yours truly, *John Watt,*
*Of Watt & Campbell.*

---

WASHBURN, ILL., June 17, 1901.
*Editor American Poultry Journal.*

DEAR SIR: In answer to your letter of the 12th, my sales for past season have been good. More wants than we could supply. My hatches for past season have averaged 75 per cent. My young chicks, about 400 in all, are the finest we ever produced in color and shape. Some that will weigh two pounds. We expect to build more room this fall and continue to build as our business increases. We expect to have a small show in Washburn this fall. Nearly all the breeders here belong to the Wenona association. Truly yours, *Thomas McKee.*

---

PORT HURON, MICH., June 15, 1901.
*Geo. G. Bates, Editor.*

DEAR SIR: Your favor of 12th inst. at hand. I have had the most wonderful hatches in nine years' experience in the fancy poultry business. Eight chicks has been our smallest hatch this season. Eleven and twelve chicks per setting has been our regular hatches. Chicks are very strong and growing better than we ever saw before. We have out about 100 Buff Orpingtons and such color we never saw before on Buffs. We are sure they will develop into 80 to 95 per cent exhibition and breeding birds. We bred from a 95½ point cockerel, weighing eleven pounds and we mated him on females as near solid Buff as they grow, and the quality of the chicks proves the mating was correct.

Egg trade has been wonderful. We have been behind on orders for Orpington eggs all season. We have shipped eggs as far Los Angeles, Cal., and Albuquerque, N. M. Orpingtons are the coming fowl and there is big money in breeding them. We will have an extra fine lot of chicks to sell.

AMERICAN POULTRY JOURNAL has brought us good business. Wishing you continued success. Yours for Buffs,
*Thos. H. Mills.*

---

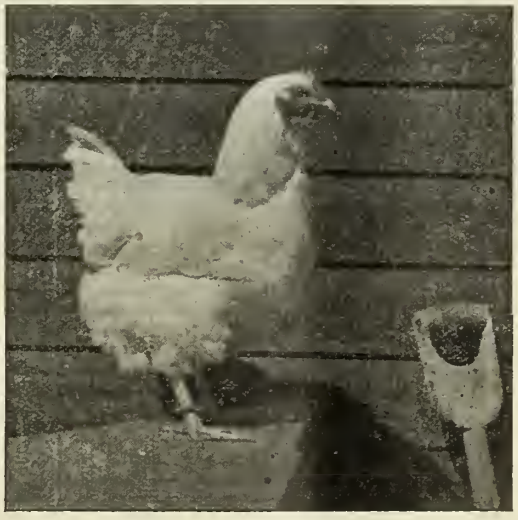
SPRINGFIELD, O., June 15, 1901.
*Editor American Poultry Journal.*

DEAR SIR: Your favor of the 12th inst. at hand. This year is very much better than last season, each and every month's sales are larger. Demand is for better poultry. Hatches are good. We will enclose few reports from all quarters of the United States and foreign countries, which will show how eggs have hatched. Eggs have been very, very fertile. I am going to put up two more large poultry houses. We have great many new beginners and some of them are spending lots of money for houses and stock, eggs, etc., and they seem to all be going to try the ever popular Barred Rocks. Your valuable paper has done well for me. Wish you people success. I am yours truly, *Geo. M. Leffel.*

---

WEST LIBERTY, IOWA, June 17, 1901.
*Editor American Poultry Journal.*

DEAR SIR: My stock sales for the past year were the best of any year since we first began the breeding of fancy poultry, which is now twenty years, the price per bird sold, or I should say, the average price, being higher than for any past season. Our customers were very much pleased with stock shipped them. That part of the business is one feature that encourages us. The egg trade was all we could ask for through April and May, but it shut off most completely after June 1. Eggs did not hatch extra well in March, but through April and May the percentage was extra good. We have 400 young Barred Rocks growing as fast and are as thrifty as any we ever raised. The prospects are very favorable for a large percentage of fine birds that should come into condition for the late December or January shows. The next show season will certainly be a record breaker if number of shows to be held count for anything, as there is many new associations formed with the most of the older ones out with dates for the coming



WHITE WYANDOTTE HEN.
Winner of first at Rochester, N. Y., 1901. Bred and owned by C. S. Wetmore, Lockport, N. Y.

**BLANCHARD'S WHITE LEGHORNS.**

**The Leading Strain of Heavy Layers**

Are no experiment, having been carefully selected and bred for over 20 years with results that fully justify the claim that they are **THE GREATEST LAYING STRAIN OF SINGLE-COMB WHITE LEGHORNS IN EXISTENCE.** No labor or expense has been spared in building up this strain, and while the production of large, pure white, fancy market eggs has been the main object, **STANDARD QUALITIES** have not been neglected. They are large, vigorous, active and handsome, unexcelled for introducing new blood or as foundation stock. 1,000 birds for sale. Cockerels for sale. **Eggs for hatching from finest** stock in large or small lots.

**H. J. BLANCHARD, Box 997, Groton, N. Y.**

**BUFF LEGHORNS and BUFF P. ROCKS.**

**EGGS at Greatly Reduced Rates** for the balance of the season. ***WHITE and BLACK BEGIAN HARES.*** In Blacks we have several bred does for sale that are extra fine. Whites as fine as are in the world, for sale at reasonable rates.

season. To sum up, there is every indication of a big trade in good poultry for the coming fall and winter. Very truly, *F. H. Shellabarger.*

---

FALL RIVER, WIS., June 17, 1901.
*Editor American Poultry Journal.*

DEAR SIR: Egg trade has been very good this spring. Could not fill all of my orders for Pekin duck and Toulouse geese eggs, although I kept more than twice as many breeding ducks as usual. Eggs have not hatched as well as common, so have not gotten out as many as I would like, but expect to make up in quality what I lack in quantity. Have lost but very few after they were hatched. Never had a finer, healthier lot, and expect to have some winners among them. My White Plymouth Rocks are the finest I ever raised. I expect to be sold out early this season, as I could not fill all of my orders last year.

Most of my inquiries come through my ad in AMERICAN POULTRY JOURNAL, although I got a good many orders last season from people to whom I had sold stock before.

*Harvey H. Huggett.*

---

DANA, ILL., June 17, 1901.
*Editor American Poultry Journal.*

DEAR SIR: The demand for stock has been better than for eggs. Business has been fair and have a good crop of young stock. Will sell out my Leghorns and Barred Rocks and give my entire time to White Wyandottes, Pekin ducks and White Holland turkeys. The White Wyandottes are surely a great fowl. I have been breeding them for three years and could sell all the stock and eggs I could spare without any advertising. Wishing you success, I am yours truly,

*A. V. Dykes.*

---

ALIDA, IND., June 13, 1901.
*Editor American Poultry Journal.*

DEAR SIR: Replying to your inquiry of June 12, this season's work has been quite satisfactory. Very late spring and early hatches poor. May hatches very good. Eggs set at home hatched 85 to 90 per cent. Customers report 60 to 70 per cent on railroaded eggs. Egg trade as good as we could expect, this being our first year in the show room and advertisers' column. The ready and satisfactory sales on stock and the appearance of our 200 youngsters encourage us in the belief that we have raised a few fairly good ones and we hope that through them we will become better acquainted with the poultry world next and each succeeding year. Will dispose of all my White Leghorns and breed Barred Rocks exclusively next season. I believe by giving all attention to my favorites I can handle them in larger numbers and want to put them as near the top as possible. Yours truly, *E. J. Horton.*

---

PLATTSBURGH, N. Y., June 15, 1901.
*Editor American Poultry Journal.*

DEAR SIR: Replying to yours of the 12th our success as poultry supply dealers has been marvelous the past season and the unbounded satisfaction La Porte's Insecticide is giving as a lice killer is truly wonderful and from the sales we are making it will soon take the lead of all insect destroyers. The outlook for trade in cut clover and clover meal is most flattering. Yours truly,

*Cleveland Poultry Co.*

---

LANARK, ILL., June 17, 1901.
*Editor American Poultry Journal.*

DEAR SIR: In replying to yours of recent date will say that my sales of eggs have beeen good and a great many fine hatches reported. I have 1,500 head of fine young stock coming on and will be ready for fall fairs, and will be able to fill all orders promptly after September 1, 1901.

The AMERICAN is a dandy for an order bringer and could not do better. Thanking you for kindness, I am yours truly,

*H. S. Marks.*

---

AMENIA, N. Y., July 15, 1901.
*Editor American Poultry Journal.*

My trade during the past season has been enormous for both stock and eggs. The shipments of birds were rapid and all eggs have gone fast as laid since January. My present stock of chicks is the largest I ever had and I am in shape to furnish customers the best Barred Rocks as usual. Yours truly,

*E. B. Thompson.*

---

JACKSONVILLE, June 15, 1901.
*G. G. Bates, Editor.*

DEAR SIR: In compliance with your request I will give you a brief report if my past season's success and failures, part of which may prove helpful, while a portion may only serve as an object lesson. I mated up four very fine yards of Barred Plymouth Rocks early in January, being more breeders than I have kept any previous year. I have growing more February and March hatched chicks than in former years; also have more of all ages and four more hens yet to hatch. But lost a great many good fertile eggs with an unsatisfactory incubator, therefore have not sold a dozen eggs on the market thus far, and although I am carrying nearly double the usual amount of advertising, I have not sold one-half the amount of stock and eggs I did six or eight years ago. In about like ratio the number of inquiries increase over the number of sales made, and this in the face of the fact that with my system of pedigree breeding, better results are obtained in quality each succeeding year as my show records amply prove. I am

WHITE WYANDOTTE COCKEREL.
Head of first prize pen at Rochester, N. Y., 1901. Owned by C. S. Wetmore, Lockport, N. Y.

carrying over three extra males, something I have never done before, and if it were not that all are of A No. 1 quality they, too, would go on the market by the pound, same as eighteen females I have recently disposed of while prices are good. There is no use of dodging it, the fancy is being overdone, as nearly every breeder in this vicinity could truthfully duplicate this report. The straws indicate which way the wind blows. For instance, the consolidation of many fancy poultry journals into one or more market

**BARRED P. ROCK BREEDERS FOR SALE**

***Cocks scoring 85 to 94 points. Price $2 to $25. Hens scoring 85 to 94 1-2 points. Price $1 to $20. I now have 1000 head of young stock for sale.***

***C. A. PORTER, Box B, Flat Rock, Ind.***

poultry journals. A selection of more plausible reports might prove more satisfactory, but the truth is good enough for me at all times and in all places, hence if this does not meet with your approval why simply throw it out.

As to future plans it stands me in hand to be more conservative. I must needs spend less time, care and money. Barred Plymouth Rocks have become too numerous to bring remunerative prices, hence I have made a small start in Buff Orpingtons, believing they are the coming fowl, combining size, beauty, blocky build, early maturity and great laying qualities and their popularity increases as they become better known.

I shall not discard my old favorites by any means at present, but shall cull very closely. Among my earlier hatches I have some very promising show birds, but interest is flagging here, though likely will warm up as show season approaches. Allow me to congratulate you on the continual improvements noted in the AMERICAN POULTRY JOURNAL. Respectfully yours, *M. L. Edson.*

---

*Editor American Poultry Journal.*

DEAR SIR: In reply to yours of June 12, I sold all the stock I had to sell early. Have shipped eggs from New York to Kansas. Best season I ever had. The AMERICAN POULTRY JOURNAL has done me good, better than any other paper I advertised in. My hatches have been fair; have out over 300 chicks, and am sure they are the best I ever had, as my matings were the best I ever owned, and as they are line bred I know I will have some good ones. All patrons been satisfied and had no complaints. There will be fully as many poultry shows in this vicinity, and I think several new ones. The big show will be held at Cleveland December 4 to 11. Our state show will be held with the Cleveland Poultry Club and combining the two shows will make it second to no show in the country, so I advise all the boys who want to make a record and to buck up against the best of quality to show at Cleveland. Yours most respectfully. *E. F. Peirce.*

*Port Clinton, Ohio.*

---

ST. CHARLES, ILL., June 14, 1901.

*Editor American Poultry Journal.*

DEAR SIR: Thousands of breeders are looking for brooders that will raise the chicks and we have sold a great number of our brooders, and some of those who tried one-half dozen are corresponding for from twenty to fifty this fall. We have also had wonderful success with our brooder system, which will surprise everybody and make the broiler business pay, as 90 per cent of the chicks may now be raised by this system. We have completed our experiments on a natural hen incubator after fourteen years of study, following nature in every point. We will put this incubator on the market next year and the broiler raiser will have no more dead chicks in the shell nor any fooling with moisture or ventilation. It is our intention to organize a company with sufficient capital to increase the business on a large scale. The company will be organized this fall and will be called "The Natural Hen Incubator & Brooder Co."

AMERICAN POULTRY JOURNAL has done 90 per cent of our business to date. We have sold brooders in almost every country, all credit to AMERICAN POULTRY JOURNAL'S world-wide circulation. I have hatched 400 chicks and have lost thirteen to date, and have 200 more to hear from. Eggs hatched well since March 15. Egg trade was fair. Some eggs that I have purchased at $5 per sitting did not produce a chick and the expressage was $1.05 per sitting bought. This is somewhat discouraging. Close confinement and inbreeding is the cause of infertile eggs. Yours truly,

*John M. Sontag.*

ELBURN, ILL., June 18, 1901.

*Editor American Poultry Journal.*

DEAR SIR: Yours of recent date received. I am well pleased with my advertising in your paper. I have made some nice sales through your efforts. Eggs did not prove fertile early, but later they hatched nicely. I have a fine lot of chicks getting ready for fall and winter shows. We have shows at the same places as last year, and I look for a larger exhibit than ever before.

*Geo. J. Gleason.*

---

NEW LONDON, OHIO, June 19, 1901.

*Mr. George G. Bates.*

DEAR SIR: I have your communication of late date regarding results derived from advertising in AMERICAN POULTRY JOURNAL. For your information will state that the writer has been represented as an advertiser in the columns of the AMERICAN POULTRY JOURNAL, I believe every month for fully fifteen years and consider the A. P. J. one of the best, if not the very best, paper in this line published in the country. Our trade so far the present year, or rather the past year, in both fowls and eggs, has been very satisfactory in every respect. Our egg trade has been fully equal if not a little ahead of a year ago, and orders are still coming in in a limited way at the present writing. I expect to continue to advertise in the AMERICAN POULTRY JOURNAL as long as I continue in the business and that probably will be for life. We have been fairly successful this year in getting a large lot of young stock out; however, none of it is extremely early. In round numbers we have, I presume, somewhere around 4,000 birds, and these chicks have been produced from choicest matings we have ever owned. I see no reason why they should not be at maturity the best all around birds ever produced on Linwood Poultry Yards.

Wishing the AMERICAN POULTRY JOURNAL continued success in the future and thanking you for past favors, I remain,

Fraternally yours, *Chas. McClave.*

---

MILTON, ILL., June 19, 1901.

*Editor American Poultry Journal.*

DEAR SIR: The demand for stock in winter and spring was greater than I could supply and had to return a great many orders, especially was this true of the duck trade, and the larger per cent. of orders came from AMERICAN POULTRY JOURNAL readers, allowing me to give credit where credit is due. Egg trade was a little slow early in spring, but up to the present time am rushed with orders. Eggs have hatched well in my own hands (having hatched 612 B. P. R. and White Wyandotte chicks in a 200-egg machine during four hatches). If

SCOTCH COLLIE PUPPIES.

my customers have had poor hatches they have kept it to themselves, as I have not had a single complaint and some have ordered the second time. I have 150 young Pekin ducks incubated with hens, besides a great many turkeys. My young stock is doing fine. They will have free and unlimited farm range while growing. Yours,

*Mrs. A. J. Colvin.*

CONNERSVILLE, IND., June 19, 1901.

*Editor American Poultry Journal.*

GENTLEMEN: Inclosed find money order for $4.20 in payment for one-inch space for March, April and May. My egg trade this season has been light, but I do not consider this detrimental to me, as it has enabled me to get out a fine lot of chicks just when I wanted them: in fact, I believe it would be to our best interests to refuse to sell eggs at all, as selling stock is more profitable and a great deal more satisfactory. Trade in stock has been extra good the past season, practically all of the sales coming through the AMERICAN POULTRY JOURNAL. Yours very respectfully,

*E. C. Brattain.*

NEW ALBANY, IND., June 22, 1901.

*Editor American Poultry Journal.*

DEAR SIR: The season just closed was a prosperous one. My ad. in the AMERICAN POULTRY JOURNAL brought me inquiries from all over the country, from which I made many sales. I sold all the stock I had to sell; was sold out early, and could have sold many more. Egg trade was good; better than any previous year since I began breeding White Plymouth Rocks seven years ago. Have shipped eggs to all parts of the United States and as far as Canada, and with but one or two exceptions customers have reported good hatches. Eggs have hatched well at home. I have out about 250 chicks, ranging from March to May hatch, and they are doing fine. If past records and present indications count for anything I expect to be in line for next season's business with as good as the best.

*W. A. Greene.*

CAMDEN, ARK., June 19, 1901.

*Editor American Poultry Journal.*

DEAR SIR: Your favor at hand, and in regard to our business for this season have had the trade of our life and am still shipping eggs right along the same as in March; also breeding stock, many of which we are closing out to make room for chicks. Eggs have hatched remarkably well, giving satisfaction both at home and abroad. Have shipped stock and eggs into nearly every state and territory in America, and stock to Australia, New Zealand, Cuba, Canada and Mexico. We have out now about 2,000 of the choicest youngsters we have ever produced, and are pushing them for the show room and our fall trade, which we expect to be larger than ever before. In fact, everything has been lovely with us this season. Place just about two-thirds of the magnificent business we have had this season to the credit of the A. P. J. and you have it about right.

*G. W. Brown.*

CLEVELAND, O., June 22, 1901

*Editor American Poultry Journal.*

DEAR SIR: Crescent Farm has never had such a prosperous season in all its history. Among our many large orders for eggs for hatching we received in March the largest order ever placed by one party in this or any other country. It was for 20,000 White Leghorn eggs, and came to us over the heads of the largest and best eastern breeders.

Our White Wyandottes have made a splendid record this season at egg laying, having laid continuously from October to the present time, barring one month, nearly one egg a day for each hen.

Hatches have not been so good as we might expect, though better than other breeders have reported.

Crescent Farm has a unique method of annexing other farms to carry its stock, and by next season will have about two hundred farms, all under absolute control, and stocked with our own Crescent Farm strains of bred to lay, and bred to win, fancy and utility poultry. We are making a specialty of stocking up egg farms and broiler plants with early fall and winter laying pullets at very low rates in lots of one hundred or more. Nearly all our immense stock has already been engaged, and we only wish we had forty thousand more. All our last season's breeders are sold at good prices, and we could sell as many again. We are putting up a new building on our central or breeding farm, 80x16, to cost about $300. So many inquiries are coming to me personally every day as to best breeds for certain purposes, best ways of building, yarding, etc., that I have issued my card as "Advisory Counsellor," agreeing to give impartial advice on all poultry matters for six months for a fee of $1. In this way my customers get the experience of twenty-seven years in running their plants and avoid many mistakes. I am also gathering materials for an up-to-date practical book on Poultry, as many of my friends think there is much need of such a work.

Our poultry show in December is going to be a corker. The Cleveland Association has been incorporated as a stock company and has money enough in the bank to run two shows like the last one. The State Association will also meet with it this year, and it will certainly be one of the great shows of the country. Respectfully,

*Henry M. Ladd.*

MANSON, IOWA, June 15, 1901.

*Mr. G. G. Bates.*

DEAR SIR: In answer to your circular letter, I can report business as very satisfactory. I have sold all eggs I could spare until very recently.

Have had good results hatching, eggs being very fertile.

My plans for the future are the same as for the past, viz.: Breed nothing but the best in sufficient quantities to supply the trade.

Breeders in this vicinity are talking of an exhibition at Fort Dodge this winter, while it is almost certain that we will have a rousing big show at Des Moines. Yours truly,

*U. Grant Davidson.*

ATHENS, IND., June 20, 1901.

*Editor American Poultry Journal.*

DEAR SIR: While my egg trade has not been large the past season reports have invariably been a good hatch.

I have a good number coming on that are fine as silk.

The small ad I carried in the A. P. J. sold all surplus stock early in the season, and I am pleased to say that every customer reporting arrival of birds was pleased. Respectfully,

*J. W. Kern.*

CAINESVILLE, MO., June 18, 1901.

*Editor American Poultry Journal.*

DEAR SIR: We have closed the most successful year's business on eggs and stock and are pleased to state that AMERICAN POULTRY JOURNAL has done us all the good we could ask. Please omit from my ad the note as to eggs. We have all the orders we can fill. Yours truly,

*H. T. Rogers.*

# Questions and Answers.

Our Subscribers are invited to make use of this department whenever we can be of service to them. All questions are answered in the order in which they are received. If your question is not answered in this number, look for it next month.

*Editor American Poultry Journal.*

DEAR SIR:—Will you kindly tell me wbat is tbe matter with my ducks? They act as if they had fits. They run sideways and fall over on their backs. They kick and get stiff and their heads draw back. They live for two or three days before they die. *Mrs. E. F.*

*Phillips, Wis.*

The trouble may be caused by lice or undue exposure to the hot rays of the sun. You should see tbat they bave plenty of shade and are frec from lice. Tbe symptoms are also those of intestinal worms. If tbey have not been exposed to the sun or afflicted with lice, you had better treat them for worms. You should also be careful not to overfeed them.

---

*Editor American Poultry Journal.*

DEAR SIIR:—I would like to ask what constitutes a thorough-bred Houdan fowl. Sbould the eggs from thorough-bred fowls produce chicks with five toes? I bought a trio, one cockerel and two pullets, last February from a firm supposed to be reliable. The eggs from one of tbe pullets produced chicks with five toes and from the otber only four. *J. W. L.*

*Wetmore, Kan.*

We have not the space to give you tbe general description of the Houdan fowl. It is a crested bird of medium size and is black and white mottled. It has a leaf comb and five toes. The absence of one or more toes is a disqualification. Tbis defect is liable to occur, but it is very strange that a pure bred bird would throw four-toed chicks exclusively. We would not breed from such a specimen.

---

*Editor American Poultry Journal.*

DEAR SIR:—Can you tell me what is the cause of gapes and what is a good remedy for them? I think also that some of my fowls have cbolera. They have bowel trouble and their combs turn quite dark. It results fatally. *H. L. H.*

*Reading, Pa.*

Gapes is caused by a small worm in the wind-pipe of the fowl. These accumulate until the bird dies of suffocation. It is claimed by some that cbicks whicb have free access to ordinary angleworms are subject to gapes, but tbis tbeory will not hold good in all cases. Tbe best method to get rid of them is to saturate a feather in turpentine and swab the throat of the chick. We doubt if your fowls have genuine cbolera. It is, no doubt, a case of chronic indigestion. They sbould be fed lightly and given principally green food and whole grain with plenty of good fresh grit. An occasional feed of cbarcoal will also be beneficial.

---

*Editor American Poultry Journal.*

DEAR SIR: I want to breed Barred Plymouth Rocks, and before buying my stock, I wish you would advise me as to which is the best to get, double or single mated stock. Do you think first-class birds of both sexes can be bred from one mating? I would rather breed by the single mating sytem if I thought I could raise first-class birds. Which would you advise me to do? *G. S. H.*

*Jackson, Miss.*

The question which you bring up is one that has agitated tbe minds of poultrymen for many years, and one upon which they will, perhaps, never agree. Some of the best breeders in America claim that they produce their winning show birds by the single mating plan, and it is an established fact that many winners have been produced by the double-mating system. Yours is a case in wbicb you will have to depend largely upon your own judgment.

---

*Editor American Poultry Journal.*

DEAR SIR:—Will you please tell me through your paper what I can do to relieve my Barred Plymouth Rock cockerel? He is troubled with looseness of the bowels of a greenish sulphur color. His wattles and comb become of an ashy bue and he mopes about, although his appetite is good. *H. C. M.*

*Los Angeles, Cal.*

We would advise you to give the bird range wbere he can get plenty of green food. Keep bim well supplied with grit and do not feed high concentrated food or condiments of any kind. See that he is free from lice.

---

*Editor American Poultry Journal.*

DEAR SIR: Will you kindly tell me what will prevent chickens picking each other's neck until bare? *C. B.*

*New Mexico.*

This trouble is easier to prevent than to cure. It can at times be cured by anointing the necks of the fowls with various things objectionable to their taste. It can at times be remedied by liberal feeds of meat. Tbis trouble should be averted when it is first observed by removing from the pens those birds which are responsible for it. The entire flock soon learn the habit and we have known instances where all the birds bad to be disposed of.

---

*Editor American Poultry Journal.*

DEAR SIR: I want to ask you a few questions in regard to raising chickens by gas. Can I run an incubator with natural gas and will it do to heat my brooder house with a gas stove? I would also like to hear from you in regard to breeding and feeding Pekin ducks.

*Loogootee, Ind.* *T. C. B.*

There is no reason why you could not successfully run your incubator with gas. It would, of course, require special fixtures for the purpose, but you would have absolute control over the flame and you would be relieved of the work of filling a lamp, trimming the wick, etc, which work has disadvantages other than the labor connected with it. You could also heat your brooder house with a gas stove, but we would not recommend it as productive of best results. A system to be effective would probably be too elaborate and expensive. You will find articles in back numbers of A. P. J. in regard to breeding and feeding Pekin Ducks.

---

*Editor American Poultry Journal.*

DEAR SIR:—I take the liberty to ad-

Feed once daily, in a hot mash, Sheridan's Condition Powder. It aids in growing new plumage; gets hens in condition to lay early. It is the fall and winter eggs which pay a profit. Has been used and indorsed for over thirty years.

Eggs $2.00 for 13. $3.50 for 26. $5 for 40. A few extra choice cockerels to spare.

MRS. J. A. RIGG, Iowa Falls, Iowa.

dress you in reference to my small chicks, as I am losing some of them, still I am raising 85 to 95 per cent. The 15 per cent. I am losing is Barred Plymouth Rocks one week old. I feed hard boiled eggs with bread crumbs; also give them broken rice in the morning. At noon I feed wheat screenings and in the evening feed rice again. The rice is raw at all meals. I see no diarrhoea among them. Can you tell me what is the trouble? *C. S. B.*

*Twenty-Mile Stand, Ohio.*

If you are raising 85 to 95 per cent of the chicks you hatch, you are doing exceedingly well and far better than the average poultryman. You should be well pleased with results. The only thing wrong with your feeding is the rice. Feeding raw rice to chicks is a very bad practice. You are, of course, aware how much rice swells after being cooked. The same is true to a large extent after it enters the chick's digestive organs and if allowed to eat much of it in a raw state it will seriously affect them and oftentimes kill them. See that the chicks are kept warm and examine their heads closely for head lice.

---

*Editor American Poultry Journal.*

DEAR SIR:—Is there such a thing as a Brown Leghorn being a black fowl with a puffy head, that is, with a head something similar to what used to be called "the muffled chops?" *F. H. G.*

*Owosco Lake, N. Y.*

There are Black Leghorns, but they are a distinct variety with Leghorn shape and black in color. There are no black Brown Leghorns. No pure bred Leghorn has the "puffy head," which you mention. If you have a bird of this kind, it is, no doubt, the result of a cross at some time, in which the Bearded Polish has figured.

---

*Editor American Poultry Journal.*

DEAR SIR:—Should fowls, claimed to be pure bred Barred Plymouth Rocks, change color of feather just before and during molting, from standard color to a dirty brown. *R. C. H.*

*Wellford, S. C.*

It is entirely possible for the plumage of the birds to assume this color and still be pure bred Barred Rocks. All specimens of the breed do not show this to such a noticeable extent, but it will be found more or less and especially when the birds have been running in the sun. It is simply a fading and wearing out of the plumage.

---

*Editor American Poultry Journal.*

DEAR SIR:—I would like to ask if you ever knew of a male bird to set and hatch? I have one setting twenty-one days. Have had eggs under him twelve days. Please answer in next number, and oblige. *G. H. H.*

*Mt. Vernon, Ohio.*

We do not know whether you intended this for a joke or not. Male birds will occasionally get in the nest and imitate the hen, but we have never known one to set any length of time. If we had one so depraved and lost to all moral sense of duty and place in the poultry yards, we should cut off his head.

---

*Editor American Poultry Journal.*

DEAR SIR:—Will you please tell me what is the matter with my little turkeys? Some of them last two or three days and some die in one day. Droppings are white and thin. I feed corn bread

## Reliable Breeders' Directory
**OF THOROUGHBRED POULTRY.**

We believe all breeders whose names appear below to be thoroughly reliable and honorable, and their stock to be of superior quality. Address will be inserted in the JOURNAL for such breeders as can satisfy us upon the above points, and that their stock is thoroughbred, for **$2.00** per year, payable strictly in advance. Those who breed more than one variety, can have address under other headings (after the first) for **$1** for each variety.

and onion tops in the morning. They have a fine range in wheat field, meadow and woods during the day and at night I feed them all they can eat of the same food. They are growing nicely and feel heavy to lift them until they are taken sick. I have tried Pratts Poultry Food, but it does no good. *A. L. D.*

*Godfrey, Ill.*

You seem to be caring for your birds properly in the way of feed and range. We should judge that the poults have become chilled or perhaps troubled with lice. Young turkeys are very delicate until they reach a certain age and the greatest care must be taken of them.

---

*Editor American Poultry Journal.*

DEAR SIR:—I am contemplating keeping about 300 hens for laying purposes and want to know how large a house it will be necessary for me to build; also if you know of any place where I can get plans for such a poultry house. I would want it to have all the improvements and not cost a lot of money.

*New York City.* *P. W. D.*

For a flock of this size we would advise you to provide several houses. It is a good idea to have pens 12x12 and about twelve birds in each pen. We publish a book, "How to Build Poultry Houses," which we will mail to you upon receipt of price, 50c. It is profusely illustrated and contains plans for all kinds, styles and sizes of houses, both for large and small flocks. You will find in it complete information and instructions, relative to building.

---

*Editor American Poultry Journal.*

DEAR SIR:—I am having trouble in raising my incubator chicks. I always get good hatches and the chicks are lively when they come out. They get along nicely for about a week and then they stop growing. It seems that the trouble always begins on the eighth day. Sometimes as high as twenty chicks die in the brooder each night. We feed them rolled oats, corn bread, meat and meal and bone meal. They have plenty of fresh water. We have used remedies in the drinking water. The brooders are cleaned three times each week. The chicks also have access to charcoal and grit. I have had good success with my chicks heretofore under the same treatment and cannot understand what the matter is now. They do not have bowel trouble. The eggs are from strong, healthy Plymouth Rocks. Please give me your opinion. *V. S.*

*Marion, Wash.*

If, as you state, you have had good success previously under the same management which you are now giving the chicks, we are unable to suggest the reason for your failure at this time. It may be that you have overcrowded them in the brooder. This is a very important item and one which is responsible for a great deal of trouble that is charged to many other things. When the brooder is overcrowded the chicks perspire freely, which greatly weakens them. The weaker ones, which are crowded into the corners of the brooder, succumb during the night and are found dead in the morning. We would suggest that you give special attention to the management of your brooder.

**WM. SCHULTZ, 1050 Arcade st., St. Paul, Minn**

**PHELPS' WHITE PLYMOUTH ROCKS**

Are prize winners. Size, shape, color. I hold the White Plymouth Rock Club diploma for best pen in the state, won at Club meeting, Columbus, O., Jan., 1900. I have the best strain of line-bred White Rocks in the U. S. Have never been beaten. Show birds that will win. Breeders that will breed right. Old and young stock. Prices right. Eggs, $3 per 13. Write.

**FRED J. PHELPS, Bucyrus, Ohio.**

I have sold the winners at the largest shows, They win for me; they will for you. Try them.

dead. They eat and drink and are not affected by bowel trouble. I feed rolled oats and millet and have a nice clean place for them. They have plenty of fresh water. They were hatched with a hen and are still with her. The hen is kept shut up, but the chicks have all the room they want. *A. K. J.*

*Corry, Pa.*

In the absence of any more definite information, relative to feed, etc., we can only hazard a guess at what is causing your chicks to die. The symptoms you describe indicate that your chicks, like thousands of others are being killed by head lice. We presume this has escaped your attention or you would have taken the pains to have stated that the chicks were free from lice. Examine their heads carefully and grease lightly with lard.

---

*Editor American Poultry Journal.*

DEAR SIR: What would you recommend as the best permanent pasture for chickens? How would a mixture of 50 per cent bluegrass, 40 per cent white clover, 5 per cent each of red clover and alfalfa do? On what grass or grain will grasshoppers thrive best? *R. B.*

*Raymond, Neb.*

Alfalfa is one of the best green foods for your section of the country. It will yield three or four crops of hay every year, no matter how dry and hot it is. Alfalfa is about the first thing to start in the spring and the last to dry up in the fall. It is supposed to do best on bottom land. The mixture which you suggest would not be best, because a soil that is suitable for bluegrass would hardly do for alfalfa and red clover. Rape is also one of the best green foods. It grows rapidly and the birds may be turned in upon it until they have eaten it almost down to the ground. If they are then taken away, it will grow up again. Rye is also good and can be sown at any time. Grasshoppers and crickets will as a rule thrive upon almost any kind of vegetation, such as grass, clover, alfalfa, etc.

---
